'No harm in sitting in an armchair in the same room with a gentleman, a captain in Her Majesty's service, who has been in India, when he is in a condition of partial undress! In such a house as this, such transgressions cannot be passed over. My nephew informs me that you have been old acquaintances; but old acquaintanceship does not remove all the barriers of female delicacy, and give a woman liberty to look at a man's foot without his boot covering it. It is perhaps allowed us to know that the other sex has feet, because they are mentioned in the Bible; but we know it as we know that we have antipodes, by faith, not by sight.' She fanned herself with a vehemence which made her hot, and fluttered the little silver barrels on both sides of her brow. 'Cable—it does not please me to have simultaneously under my roof a nephew as a visitor and an old acquaintance of his—*chum*, he called you—as a lady's-maid. The situation is incongruous, and leads, as I have seen to-night, to injudicious conduct, which may, which has occasioned scandal; and such a house as this must be maintained in its dignity and irreproachability. Either the captain, my nephew, or you, my servant, must leave, and leave without delay.'

'Of course, Miss Otterbourne, I will go.'

'If you can make it convenient to depart to-morrow, you will oblige. I am sorry to say this, but—it is quite impossible for me to have my nephew and you under the same roof together. I have the greatest reliance on his discretion; I wish I could say the same of yours. You shall receive, as is your due, a month's wage, because you leave to suit my convenience. There is an excellent Refuge for domestics and governesses out of place at Bath, to which I subscribe, and you can go there till you hear of a situation.'

'Thank you, Miss Otterbourne, but I shall not stay in Bath.'

'Will you go back to Hanford?'

Josephine shook her head.

'I am sorry—I am sincerely sorry. There is so much good about you, so much that I have liked; but, under the circumstances, I cannot retain you. It would not be right; and in this house—from myself down, I believe, to the scullery-maid and the boy who cleans the knives—I trust we all try to do that which is right. Mr Vickary is a burning and a shining light, and Mrs Grundy, hardly less so—a moon beside the sun. But I will not speak of this. I never dismiss a servant except for some gross offence—and I really do not believe such has occurred—without some little testimonial of my regard; so you must allow me to present you with a five-pound note in addition to your wage. You have been guilty of an indiscretion—I firmly trust, unpremeditated.'

'O Miss Otterbourne!'

'Where do you purpose going?' asked the old lady. 'I cannot possibly permit you to depart without some knowledge that you are going to a place where you will be cared for.'

'I am going.'—Josephine looked down, then up—'yes, I am going down into Cornwall.'

'Into Cornwall. Where to?'

'To my husband.'

'Cable—what? Husband! I do not understand.'

'To my husband, madam.'

'You are a married woman?'

Josephine bowed.

'Goodness gracious me!—But that somewhat alters the complexion of affairs. A married woman! Does my nephew know that?'

Josephine bowed again.

'A married woman!—But where is your wedding ring?'

'In my bosom.'

Miss Otterbourne fanned herself fastly, not with wrath, but with the agitation occasioned by amazement. 'Merciful powers!—you married! Who would have thought it! And so young, and so pretty! It hardly seems possible. But—if you are married—it is not so dreadfully improper that you should know men have feet under their boots. I do not say it is right; but it is not so very wrong that—that you should have seen a hole in my nephew's stocking, because married women do know that such things occur.'

Josephine smiled; she thought Miss Otterbourne was about to retract her discharge, so she said: 'Madam, I cannot stay here. I have explained my reasons to Captain Sellwood, who will tell you after I am gone. Now I have made my resolve, I go direct to my husband.'

The door of the drawing-room opened and the butler came in. He advanced deferentially towards Miss Otterbourne, and stood awaiting her permission to speak.

'What is it, Vickary? Do you want anything?'

'It is Cable, madam.'

'Well—what of Cable, Vickary?'

'Please, madam, Cable's husband have come to fetch her away.'

### CURIOUS FACTS OF INHERITANCE.

THE strength of the law which determines the transmission of character—physical or otherwise—from parents to children is still far from receiving due attention and recognition. A striking instance of inheritance is often hailed as wonderful and inexplicable; yet such cases are merely exaggerated examples of a phenomenon of which every family, nay, every individual affords proof. We all inherit in a more or less variable degree the physical constitution and the mental aptitudes of our parents; but this law of inheritance is liable to so much modification, that frequently its operation becomes entirely lost to view. When two forces act upon a body, the resultant is a mean between the two components. This mean is not merely in all cases different from either component, but it is a variable mean, the variation depending upon the relative strength of the two component forces. Inheritance affords an exact parallel to this elementary law of mechanics. No child is entirely like either parent; and the inheritance of two sets of tendencies which may be allied, opposed, or indifferent to each other, may result in characters possessed by neither parent. This result is no breach of the law of inheritance, but is in strict harmony with its most precise conditions; yet it is not surprising that a law subject to such indefinite variation should gain scanty recognition except from those who have made it a special study, and can, therefore, readily distinguish an explicable exception to a law from an actual breach of it.

That the law of inheritance should be constant in its operation, however variable in its effects, is not a matter for surprise. That like produces like is the law written upon the universal face of nature. Sir Henry Holland truly observes that the real subject for surprise is not that any peculiarity should be inherited, but that any should fail to be inherited; and Darwin remarks that the most correct way of viewing the whole subject would be to look at the inheritance of every character as the rule, and non-inheritance as the anomaly.

It is obvious that instances of inheritance are most likely to be noticed and recorded when the inherited peculiarity is striking and abnormal. Countless instances of inheritance come under our notice almost every day; but the vast majority of them are too slight and insignificant to attract attention. A slight peculiarity of feature, complexion, or voice will readily pass unnoticed; but if a striking deformity be inherited, or some disease pursue a family through several generations, it can hardly escape the most careless observation. Cases are on record of families whose members were characterised by the posses-

sion of a supernumerary digit on the hands and feet, and this remarkable peculiarity has been transmitted through five generations, showing how strong is the force of inheritance even in such a minor detail of structure. A still more singular instance is that of Lambert, the well-known 'porcupine-man,' whose skin was thickly covered with warty projections, which were periodically moulted. He had six children, who were similarly affected; and two of his grandsons inherited the same strange peculiarity. The writer is acquainted with a gentleman who has a marked drooping of the left eyelid. His son inherits this peculiarity, but in a less remarkable degree. One of the most singular instances of inheritance is that recorded by Decandolle. There was a family in France of which the leading representative could, when a youth, pitch several books from his head by the movement of the scalp alone, and he used to win wagers by performing this feat. His father, uncle, grandfather, and his three children possessed the same power to the same unusual degree. This family became divided eight generations ago into two branches, so that the head of the above-mentioned branch is cousin in the seventh degree to the head of the other branch. This distant cousin resided in another part of France, and on being asked whether he possessed the same faculty, immediately exhibited his power.

Haller, the celebrated physiologist, records that the family of the Bentivoglio all possessed a tumour which used to swell when a damp wind blew, and this strange peculiarity was transmitted from father to son. The frequency among the Romans of surnames indicating some physical peculiarity—Naso, Labeo, Bucco, Capito—would seem to show that the fact of certain types of feature being transmitted through several generations had already been remarked. This fact lies almost unnoticed under many current forms of expression. We speak of a certain type of face being aristocratic or the reverse, by which we mean that physical features characterising certain classes are transmitted so surely as to become the recognised appanage of those classes. The aristocracy of Western Europe pride themselves upon possessing and transmitting small hands, the outward and visible sign of long exemption from manual labour. The aristocracy of China pride themselves on the smallness of their feet. The implication is in each case the same. We often speak of 'blue blood' without any clear idea of the meaning of the expression. The phrase probably arose from the recognition of the fact, that the aristocratic and luxurious classes, who are exempt from actual labour, possess a fine white skin, through which the veins show themselves clearly, and that this peculiarity is transmitted from generation to generation. It is a fact of history that Frederick-William I. of Prussia succeeded in producing a stock of gigantic grenadiers by matching his tallest soldiers with women of similar proportions.

No point of structure is too minute to afford instances of the law of inheritance. A little spot on the iris has been transmitted from parent to child. The possession of a few abnormally long hairs in the eyebrows has been known to characterise the various members of certain families; and the characteristic of a patch of prematurely

gray hair has been transmitted through several generations. Many curious records exist of families which possessed and gloried in their scars, moles, and other family marks, faithfully transmitted from parent to child—a sort of secret hall-mark stamped by nature to attest the genuineness of the line. Peculiarities in the structure, arrangement, and even in the chemical composition of the teeth, frequently run in families. The writer, among whose professional duties the frequent inspection of tongues holds a humble but not unimportant place, has remarked a notable peculiarity in the shape of that organ transmitted from mother to daughter.

Peculiarities in the expression of the face are frequently inherited. Many cases may be remarked where an inherited resemblance is quite latent when the features are in repose, but comes out with startling vividness when they are agitated by emotion. Among the acquaintances of the writer is a gentleman who, when smiling, exhibits a most peculiar and unusual arrangement of lines at the outer angle of the eyes, and this characteristic has been faithfully transmitted to his children.

When we turn to the lower animals, the instances of striking peculiarities being inherited are still more numerous, and have been recorded with greater care and accuracy. Every breeder and trainer is aware of the vast importance of the law of inheritance, and no instance is allowed to escape notice; but it is only in recent years that philosophers have become alive to the fact that in his physical nature man obeys the ordinary biological laws which prevail among the higher animals, and that among these laws the law of inheritance holds the first place. A breed of cattle once existed which possessed only one horn, and this was transmitted. A one-antlered stag has been known to propagate this peculiarity in his offspring. A rabbit produced a litter in which one of the young was one-eared, and this was transmitted. Many of the most famous breeds of sheep and cattle have arisen through the accidental appearance of some striking peculiarity of structure, which has been preserved by careful selection and breeding. Thus the well-known Ancon or otter-breed of sheep, now extinct, arose in the last century in Massachusetts by the accidental birth of a ram characterised by crooked legs and a long back like a turnspit. These peculiarities rendered him unable to leap fences, and as this was a point of great importance to the early settlers, this ram was selected for breeding, and his abnormalities of structure were faithfully transmitted. The breeds of Mauchamp sheep and Niata cattle had a somewhat similar origin. Darwin relates how in a litter of pointer pups one was observed to be of a blue colour. This remarkable circumstance led to inquiry, and it was found that, four generations earlier, there had been in the same breed a pointer bitch named Sappho, celebrated for her blue colour. We have here an instance of one of the secondary laws of inheritance known as the law of Atavism (from *atavus*, an ancestor). According to this law, any peculiarity, instead of passing directly from parent to child, may skip one or more generations, and reappear lower down in the line of descent. Of this curious law innumerable instances occur. It is not uncommon for a child to resemble

his grandparents much more closely than his father or mother. This is frequently noted in the case of animals, where we have the opportunity of observing several generations, and analogy would lead us to expect a similar principle in the case of man. The law of Atavism can only be explained by assuming that the qualities which were *patent* in grandfather and grandchild were *latent* in the intervening generation. There is nothing difficult or arbitrary in this hypothesis, as multitudes of facts are on record to prove that physical and intellectual peculiarities may remain dormant for long periods in an individual, and suddenly develop into prominence under some unwonted pressure. Thus, privation or confinement in an unwholesome atmosphere may develop a latent tendency to consumption. A severe illness has been known to determine the onset of insanity, to which the individual had a hereditary predisposition; or, to take more hopeful instances, a severe shock, such as bereavement or the sudden loss of fortune, has been frequently known to bring out unexpected traits of character, and to develop a resolution and a magnanimity, of which the individual had previously exhibited no evidence. Our characters, in addition to those prominent traits which attract general attention, have a multitude of secret marks traced as it were in invisible ink, and ready to spring into prominence on condition of the necessary stimulus being applied.

When we leave the domain of structural peculiarities and turn to that of mind, habit, and instinct, we find an inexhaustible store of curious facts of inheritance. Contrary to popular belief, there seems no reason to doubt that genius is hereditary, though, from the obvious conditions of the case, it is rarely transmitted in like quality and degree from parent to child. The subject is too large to be advantageously considered here; but those interested in it will find a vast mass of striking information and ingenious reasoning in Mr Francis Galton's admirable work on *Hereditary Genius*.

A case is on record of a man who possessed the habit of sleeping on his back with the right leg crossed over the left. His daughter, while still an infant in the cradle, exhibited the same peculiarity. The possibility of imitation, conscious or unconscious, is here obviously excluded. A case has been reported to the writer of a man who had the habit of alternately flexing and extending his great toe while lying in bed. His grandson developed the same habit, though quite ignorant of his grandfather's peculiarity. Ribot records a curious instance of a domestic servant who exhibited an incurable vice of loquacity. She talked incessantly to any one who would listen, to animals, to inanimate objects, and even to herself. When upbraided with her folly, she said it was not her fault, as her father had possessed just the same habit, and had almost driven her mother distracted by it!

Instinct is strongly hereditary in animals, even under the most unfavourable conditions. Ducklings hatched by a hen take to water immediately on breaking their shell; and every one is familiar with the spectacle of the distracted mother wildly running to and fro on the margin of the duck-pond, while her youthful family, heedless of her terror, disport themselves delightfully upon

its surface. If the eggs of the wild-duck be placed under one of the domesticated species, the young, when their feathers are complete, immediately take to the wing. Birds hatched in confinement construct in their cages the same kind of nest as their more fortunate brethren of the same species build in the virgin forest. Many curious and apparently mysterious facts are explicable on the hypothesis of the permanence under changed conditions of traces of aboriginal instincts. Thus, the domesticated dog, even when thoroughly well cared for, is very fond of burying a bone in some secret spot—a lingering trace, probably, of the time when he ran wild in the woods, and the secreting of surplus food for a future occasion was a matter of practical importance to him. When the squirrel is reared in confinement, it stores away in a corner of its cage a portion of the nuts supplied to it, an instinctive preparation for the coming winter, unnecessary, indeed, for this individual squirrel, but highly important for its ancestors and congeners living in the wild state. Every one must have observed how difficult it is to make the common ass leap over a stream, however small. This unwillingness is not the result of an inherent incapacity for jumping, as the ass leaps over other obstacles with ease, while it hesitates obstinately at the tiniest streamlet. We have here, in all probability, a remnant of an instinct dating far back to the time when the ancestors of the ass were exclusively desert animals, and so unaccustomed to the sight of running-water as to be confused and terrified by it. If any one observes a field of lambs at play, he will notice with what delight they frisk upon any hillock within their reach. Here we have probably a trace of the time when the progenitors of our sheep were Alpine animals, and possessed the habits of the chamois.

In the realm of disease, the facts of inheritance are most numerous, and are daily accumulating. Here they are no longer, alas, curious and amusing, but terrible, fateful, overwhelming. No fact of nature is more pregnant with awful meaning than the fact of the inheritance of disease. It meets the physician on his daily rounds, paralysing his art, and filling him with sadness. The legend of the ancient Greeks pictured the malignant Furies pursuing families from generation to generation, and rendering them desolate. The Furies still ply their work of terror and death; but we have stripped them of the garb which superstition threw around them, and they now appear to our eyes in the more intelligible but not less awful form of hereditary disease. Modern science, which has cast illumination into so many dark corners of nature, has shed a new and still more lurid light on the words of the Hebrew Scripture: 'The sins of the fathers shall be visited upon the children unto the third and fourth generation.' Instances of hereditary disease abound on every hand. Fully fifty per cent. of cases of gout are inherited. The proportion is not much less in that fell destroyer of families, our national scourge, consumption. Cancer and scrofula run strongly in families. Insanity is hereditary to a marked degree; but fortunately, like many other hereditary diseases, tends to wear itself out, the stock becoming extinct. Nearly all defects of sight are occasionally inherited. Sir Henry Holland says truly that 'no organ or tex-

ture of the body is exempt from the chance of being the subject of hereditary disease.' Probably most chronic diseases which permanently modify the structure and functions of the body are more or less liable to be inherited.

The important and far-reaching practical deductions from such facts—affecting so powerfully the happiness of individuals and families and the collective welfare of the nation—will be obvious to reflective minds, but cannot be dwelt upon in the present article.

## THE JULLABAD TRAGEDY.

### CHAPTER III.—DARKENING.

THE sight of that policeman lounging at the door temporarily took away my power of speech. It was the visible realisation of what I previously regarded as either malicious cruelty or the baseless folly of imagination.

'Colonel Jack,' I said at last, 'you surely do not believe that?'

The colonel shook his head. 'I believe nothing until it is proven,' he answered. 'I am as grieved as you are, young man, that this should be Mrs Humby's situation—poor child, poor child! But the charge is raised, and her innocence must be cleared. I shall be as glad as any to see it cleared. But until that is done— Well, I need not go on.—Do you wish to see her?'

'I came here for that purpose. I should be very glad to speak with Mrs Humby—if she will see me.'

Colonel Jack, without another word, left me. And now I began to feel the natural embarrassment incident to my present position. How should I open my mission to her? It occurred to me, for the first time, that her natural indignation against so foul a charge might transfer itself to me for my impertinence, as a stranger—and a young man to boot—in approaching her with the suggestion that her innocence needed defending. The thought took a most uncomfortable hold upon me, and I began heartily to wish I had given the matter more consideration before volunteering upon such an errand. However; here I was—and there was Colonel Jack, in her room, informing her of my desire to speak with her—and I must go through with it now. Only, I could hardly repress the faint hope that she might either flatly refuse to see me, or decline the interview on some pretence of indisposition. She did neither. Colonel Jack presently reappeared, holding back the *chick* or blind which hung over the doorway, to allow her to pass. As she appeared, she glanced towards me with a quiet, questioning look. Colonel Jack led her to where I stood, and introduced me, and then, with a slight bow, she sat down in the chair which he had left.

The colonel went into the house; and the policeman, obedient to a sign from his superior, retired to a distance. We were quite alone, and

I feared for my first words, lest they should be such as to create an unfavourable effect.

The way I opened the conversation illustrates a common experience of those who study overmuch beforehand what they will say on a particular occasion. I have mentioned that I believed it more than doubtful whether she remembered having seen me at Mentone two years before—she had not seen me much, and I was changed in looks—and I had made up my mind not to make so slight and doubtful a reminiscence any ground of introduction or justification for one; yet in my perplexity as to how to open the interview, it was the very thing which I did.

'I am more than doubtful, Mrs Humby,' I said, 'as to whether you have the slightest recollection of having met me before you came to India; I hardly think you can. But my having seen you then is the only special explanation of my intruding upon you now, instead of many others who are equally earnest in their desire to—give you their sympathy and help, should you accept it.'

She looked up, gently and gravely and attentively, in my face—as a child might, to whom you were imparting some serious and interesting lesson—and answered: 'I remember you well, Mr Everest. I met you at Mentone, when I was there with my father. I saw you afterwards in London,' she added, after a moment, 'at a theatre; but you did not see me.'

'Then, perhaps, you will not mind my coming here now?'

'Surely not. You have come kindly, I know. How could I resent that? I am grateful for it—grateful to every one who has given me sympathy. And—and—I saw the colour dawning on her white face, but little dreamed what she was going to say—and I owe you personally a word of thanks, Mr Everest, which I have had no opportunity of speaking until now. If only for that, I am glad you have come.' Her face was crimson now, but she looked at me full with her clear eyes as she added: 'I remember that night in the garden. I was prostrated, but not unconscious. I remember everything, every word.—Will you accept my thanks, Mr Everest?' She said it simply, without the slightest tremor in her soft low voice.

I passed from the subject as quickly as I could; I felt an embarrassing warmth suffusing my own face, which I would have given the world for her not to see.

'I have come here this evening—Lady O'Reilly,' I added more boldly, 'has commissioned me—to offer you any help you may need in your present circumstances, Mrs Humby. I will not refer to what our convictions and feelings are—but, you will let us help you? You are alone, in a strange country, and this will justify us in what we ask.'

'Thank you; I thank everybody,' she answered, with a tremor in her tone.

'Then you will permit me to speak freely?' I eagerly asked. 'Be assured that nothing shall be left undone to—to'—How hard it was, in the presence of that pale and friendless girl, so lovely

in her simple dress of black cashmere, to give utterance to the horrible charge which hung over her guiltless head!

She was braver than I was, and saved me the task. 'You want to defend me?' she said. 'It is terrible to need defence. But I felt it still more terrible to be alone—as I have been until now.' The tears burst from her eyes. God help her! how she must have suffered since her solitude was changed into a prison.

'No one knows where or how the accusation originated—no one in the station credits it,' I answered. 'All the same, for your honour we will leave no stone unturned to discover the guilty party—if there has been any guilt—or otherwise clear up the horrid mystery which surrounds that night. You will help us yourself, Mrs Humby; and with what you can tell us we shall be able to succeed in time. We must have a lawyer; and Lady O'Reilly has herself selected one.' All this I spoke rapidly and eagerly.

She dried her tears and rewarded my zeal with a faint smile. 'Alas,' she replied, 'what help can I give you? I have been questioned so much that I can only repeat over and over what I have already said. I know nothing else!'

Now, it was very probably her own extraordinary narrative of the events of that night which first turned sinister suspicion towards her. Colonel Jack, honest as he was, was suspicious from the force of habit derived from his magisterial office; and the mere fact of Mrs Humby escaping from the fire while her husband perished in it would never have associated her for a moment in any ordinary mind with his death. But that strange story which she told, and adhered to, was highly calculated first to create surprise, and then to move suspicion. And even the declaration of Lady O'Reilly, made the day before and carried all over the station, may have unconsciously opened people's minds to the idea of Mrs Humby's guilt.

But that story of hers—I felt it was the stumbling-block. How were we to get rid of it? It is very hard to get rid of an iterated statement in such a case and of such a character; in fact, we know it is impossible to get rid of it; yet the idea held me strongly that Mrs Humby was under some mental delusion, some hallucination, due to fright or excitement, in regard to what took place—that she might have thrown, unconsciously, the lurid colours of a dream of terror over the first moments of her awakening, and confounded or identified the two; and I believed that if we could establish this assumption as fact, something of substantial importance would be gained.

I led her, without difficulty, to talk freely of the events of that night. I took care to lead her up to that point only—at about nine o'clock—when she heard her husband close the door of his room. It was soon after this that she went to sleep. Now this was the point at which my anxiety took its stand.

It was the first day she had been as far as the veranda since her illness; she said she had sat there for several hours. She told me, in answer to my questions, the incident of the cook's child. She admitted, with reluctance, that she was herself in fear of her husband's violence that evening—not because the thing would have been new to her, but because she would have been less fitted to bear

it, on account of her weak health. The man was dead—had died a death horrible enough to appal even an enemy—but the mere thought of this fear made my blood boil against his memory.

She was fatigued when she lay down, dressed as she was, on her bed, and the fatigue caused her to drop off asleep. Now, what was more natural, than that a sleep under such conditions, in the close vicinity within the same walls of a man in her husband's state, should be filled with visions of fear? This was my theory, and my anxiety was great to get ground for it to stand firm upon.

'Are you in the habit of dreaming?' I inquired.

She gave me a quick earnest look, and answered, with some surprise: 'I hardly ever dream.'

The answer, and the manner of it still more so, disconcerted me. I was too eager to win my point to renew the approach by some other method, and I dashed at it at once with all my energy.

'Is it not possible, Mrs Humby, that some portion of your impressions after awaking may have been derived from or coloured by a vision you had in your sleep? Is it too late now to try and recollect whether you had been dreaming? Nothing is more likely, under the circumstances—your mind was full of certain excitements and fears—and everybody knows that the brain goes on after the body has sunk into sleep, just as the sea still rolls after the storm has ceased blowing. Pray, think: it would alter everything so much, if my impression turned out correct!'

I noticed her clasp her hands in her lap, and her face assumed a grave and even earnest expression. She was silent for the space of nearly two minutes, and from the direction of her eyes I knew she was looking across the intervening grounds at the fire-blackened remains of her late home. 'Mr Everest,' she answered at last, speaking low, without removing her eyes from that spot, 'my senses were too alert that night to deceive me.—Look!' she added, untying a small scarf from her neck.

I had heard of this before, and the evidence was perplexing—to me painfully so. The brutal marks were still clearly discernible on her delicate throat, even through the pink tinge which rose to veil them as she displayed her neck.

'No, no!' she went on, in the same low voice; 'I was not dreaming. It was all exactly as I have described it, with nothing to add and nothing to take away. What I do not remember clearly is the manner of my escape from the bungalow and my reaching here.'

'That is easily conjectured,' I replied. 'Of course, now, I entirely believe that what you state was fact, and not fancy. The mystery which surrounds it must be cleared in some way or another. Why should your husband be dressed, for instance? Can you think of any explanation, Mrs Humby?'

'None, Mr Everest. It is as much a mystery to me as to you. As well as—as his returning to his chamber again.'

'It is almost incomprehensible, seeing that the house was then actually on fire.'

It was only comprehensible on the theory that the man had committed suicide. That no one in Jullabad would bestow a moment's consideration

on such a theory in connection with Colonel Humby, is in itself a fact that may be noted.

'Do you fancy, Mrs Humby, that any of the natives might have fired the bungalow—intentionally or accidentally?'

'I do not think so. Not one of them would do harm to me.'

'Your husband had ill-used the cook's child?' I suggested.

'Yes; but the man would not have done it. He knew I was there, and that I was weak. He would not have risked injuring me,' she said, with a quiet faith that was convincing.

The fire broke out soon before eleven o'clock, and there were no natives on the premises then except the *khidmatgar* already mentioned and an ayah. No suspicion rested, or could rest, on either; and if the fire was the result of an accident, it was impossible to assign a cause after the most searching inquiry.

The long and short of it was that the inherent improbability of poor Mrs Humby's story was the source of all the misfortune which hung around her. She would not recede from one word of it. No one could understand it. How many were daily and hourly coming to disbelieve it!

If she had only been silent, she would have been safe. To myself, her very persistence in the statement, extraordinary as it was, was conclusive proof of her conscious innocence. But the same faith was not to be expected from others.

I spent more than an hour with Mrs Humby; and before I left her, she talked to me with as much confidence as if I were her brother. She let me see a little into that mystery of her life into which no eye had penetrated before. I gathered from the poor girl that she had been deceived, and had disobeyed her father, and that she was now filled with a natural but fatal craving to go back to him for pardon and rest.

'Above all things, Mrs Humby, you must not think of leaving this country until your honour is clearly vindicated. You shall have warm friends to defend you and fight for you—be assured of that. Have courage; your friends are more than you know!'

The tears were in her eyes when she gave me her hand at the conclusion of this interview. I promised to send the lawyer to her next day; and with a feeling of disappointment and deep despondency, I took my way again to Lady O'Reilly.

I related all that had passed, and my fruitless efforts to move the foundations of Mrs Humby's unfortunate statement. Lady O'Reilly listened to me attentively, and somewhat startled and shocked me by quietly asking, with her blue eyes observantly upon me: 'Tell me truly, Mr Everest—have you entire faith in Mrs Humby's innocence?'

'She is as innocent as my mother,' I answered. 'I will think over it all before to-morrow,' she said, after a pause.—'Mr Mapleson must see her, and his opinion will be of more value than ours.'

Before leaving, Lady O'Reilly invited me to call at four next day. I will pass over the intervening hours, which were anxious ones to me. I felt more than ever bound up in this young widow's fate, and it was torment to me to be so powerless as I was.

Lady O'Reilly's ayah conducted me into her ladyship's private sitting-room when I arrived next afternoon at four o'clock. Mr Mapleson was already there, having come direct from his interview with Mrs Humby.

'Mrs Humby has no more devoted friend in Jullabad than Mr Everest,' said Lady O'Reilly. —'Now, Mr Mapleson, will you kindly tell us what you have learned, and what you think?'

He told us, briefly and clearly, like a lawyer, what he had learned from his interview. Mrs Humby was perfectly frank with him—but it all came to this: he had gathered nothing new.

Questioned as to the line of defence he would adopt, he answered: 'It must in a great measure depend upon circumstances. We may try to prove it was an accident—there is no evidence to show that it was; we may try to prove that it was due to native malice or revenge—here again there is not a tittle of evidence to go upon. And mark: Mrs Humby's narrative goes against both of these possible arguments. If that story is true, how can the death of her husband be ascribed either to accident or the act of native servants? It would show that he was up and dressed, and in a position easily to escape. If it is impracticable to prove accident or malice, Lady O'Reilly—as at present it really is—there remain only two other theories by which the terrible event can be explained.'

'Please tell us what they are,' said Lady O'Reilly, as the lawyer paused.

'We must be ready, as best we can, to meet every view of the case,' he answered, fingering his watch-chain and looking at the carpet. 'The two theories are—firstly, that Colonel Humby's diseased brain contemplated murder and suicide; and that failing to do the one, he did the other.'

'Nobody would accept that theory,' I answered. 'Colonel Humby hadn't grit enough in him for suicide. He certainly had his grip on his wife's throat, though—how is that to be explained?' I felt this the one strong point, and I laid stress upon it. I was resolved it should not be lost sight of.

The lawyer's answer was exasperating in its very coolness: 'That is a point, Mr Everest, as you say. I wish we had another point or two to support it. We must bear in mind, however, that Colonel Humby often laid hands upon his wife—it is notorious, and she admits it. These marks might have been received by her before the time she mentions—we shall have to prove that her statement is true, if we rely on any part of it—true as a whole. Can we do that?'

Lady O'Reilly looked at me. I was terribly dejected by the lawyer's cold professional dissection of the case. He foresaw and took clear measure of all the obstacles.

'We must take the fact as it stands,' he went on. 'Colonel Humby was burned to death on his bed. You reject the idea of suicide. So do I, in my private judgment. Of course, as a lawyer I must make what I can out of everything that suggests itself in favour of my case. If we cannot prove an accident, we must admit a wilful and felonious act—in a word, that murder was perpetrated. I am afraid it will have to come to that,' he said gravely.

This was literally appalling, coming professionally from Mr Mapleson. It left no room for protest, for argument, hardly—as it seemed—for defence! What a fatal web circumstances had woven around this innocent and unhappy woman!

There ensued a painful silence, lasting several minutes. We did not ask the lawyer what the alternative 'theory' was—no need for that. It weighed like a mountain of lead upon me.

At last Lady O'Reilly broke the silence. For the question which she now put to Mr Mapleson, her tone was quiet, measured, as though she asked with a deliberate purpose: 'Mr Mapleson—if it is a proper question to put to you, in confidence among ourselves—what is your own opinion, frankly, as regards Mrs Humby?'

The lawyer was taken aback. For myself, I held my breath, as if it were the verdict of the jury which was about to be pronounced. 'Frankly,' he answered, 'I think she fired the bungalow. Under temporary derangement, perhaps, and without distinct intent to cause her husband's death. But from all I know at present, I cannot come to any other conclusion than that her hand did it!'

This was horrible. What I should have said or done, but for the quick and thoughtful interposition of Lady O'Reilly, I do not know. She rose, and, with reeling head, I was barely conscious that she bowed to Mr Mapleson, and went as far as the door with him. Then she came back, her lovely face lit up with that luminous kindness which heaven gives to the true woman, and laid her hand gently on my arm. 'My poor boy,' she said, 'it has been hard to hear that sentence spoken. Will it comfort you if I say that my belief in her innocence is as unshaken as your own?'

I could have fallen at her feet and kissed the shoes she wore. I only put my lips reverently and gratefully to her hand, without uttering a word. My heart was too full—too full of that which this noble woman discovered ere I was aware of it myself—love! Yes; that was my case; and, knowing it now, the state of my mind will be appreciated.

In my fevered dreams that night I saw her, from where I stood on the shore of the sea, drifting away in an open boat; her white face was turned to me in silent and hopeless appeal for the help I was powerless to give; the sharks, with their horrid premonitions of death, were gliding around her, their hideous fins showing above the water, waiting for the frail vessel to capsize and give them their horrible feast; and from time to time she put up her poor small hands to protect her uncovered head from the beating of the merciless sun. I awoke with a cry. But it was no relief to awake; the reality was quite as full of distress and peril as the dream, and my sense of powerlessness equally agonising.

Next day, which I drearily looked forward to as one of dull and helpless anxiety alone, was fraught with an event which excited Jullabad to a white-heat, and gave me such a blow as a man never receives twice during his lifetime.

I rose very early—as everybody does in India—and had a canter through the park before the

usual morning duties. After these, I went to the mess for breakfast. And here I forgot breakfast and all else in presence of the news some of our men had brought in—that Mrs Humby had disappeared from the cantonment magistrate's bungalow during the night.

I sank into a chair, apart from all the rest, with a groan. What madness could have tempted her to so fatal a step? It was an admission of her guilt before all the world. She paralysed her friends by her folly. Who could stand up for her now?

I went about in a kind of stupor all day; I did not even go to Lady O'Reilly. How could I, after what she had said to me the day before? 'My belief in her innocence is as unshaken as your own!' I knew it was shaken now—even hers! for alas and alas—I will confess it—my own had sustained a stunning blow.

Hour after hour went by, and no tidings, or even trace, of the fugitive were gathered. This was strange, because an Indian cantonment offers few chances of concealment, especially to a lady. It was certain she had not been near the railway station. The thoroughness of the search which was made, and the dead-lock to which efforts of discovery had come, may be inferred from the fact that before sunset every well in the station had been dragged without result. Had she been carried into the clouds, her disappearance could not have been more complete and untraceable.

It was 'guest-night' at our mess, and I would willingly have absented myself. Hoping, however, for a few hours' distraction from my thoughts, I went. There were a good many men at dinner, military and civil officials and fellows from other corps. The talk was all on the one absorbing and exciting topic. A hundred theories were put forward to account for the disappearance of Mrs Humby; but not one expression of belief in her innocence was to be heard—now! It was the very torture of slow death to me to sit listening, and it was inevitable that I should lose my self-control at last.

'If she is in the jungles,' I heard it observed, 'the unfortunate woman has chosen the worse of two evils. Even a native jury would have more mercy than a hungry panther.'

I rose to leave the table, unable to endure more. As I did so I heard a few words spoken near to me—by whom, I was too excited to remember at the moment: 'I am sorry for her. As long as she was entitled to a doubt, I expressed no opinion. There was more in the relations of Humby and his wife than others knew. He was no angel; but he was clearly disappointed in his wife—not that this justified ill-usage; but if his story were told, perhaps a good deal would be explained. There is no harm in declaring now the opinion I have held all along—and others as well as I—that Mrs Humby deliberately murdered her husband. Her flight in itself is confession of guilt.'

There was a murmur, but nobody dissented openly. The room swam round me, and I madly snatched a glass of wine and dashed it in the speaker's face.

'You lie!' I shouted—'like a coward and a cad!'

Men leaped to their feet, and a silence followed of intense amazement. This brought me to my senses, and I realised what I had done. I had put this public outrage on the colonel of my regiment.

### CURIOUS FINDS.

THE sea sometimes yields up part of its treasures in a curious and unexpected way, as was instanced lately by the discovery of a richly jewelled ring in the back of a herring caught at Dunbar. The finder was still luckier than a servant in Port-Glasgow, who, in cutting up some whiting, found a silver coin in one of them.

Two curious finds connected with nautical affairs should have an interest for Englishmen. Some old canvas that had long been stowed away as lumber, on being unexpectedly brought to light, was found to be the mainsail of Nelson's ship the *Victory*. The sail was riddled with shot fired during the battle of Trafalgar.—When some men were sawing a portion of an old ship's mainmast formerly belonging to a man-of-war at Chatham, a thirty-two-pound iron shot was observed embedded in the mast, the aperture having been plugged up. This was one of the largest kind of shot used in those times.

In a lake in Berkshire a large misshapen and unwieldy chub was found, so strange in appearance and unsightly in its movements, that the most apt zoologist could not account for its lineal descent or say if it was piscatory or amphibious. The creature was found in a kind of cage formed by the washed roots of an elm-tree by this lake. When young and much smaller, this fish must have got into its strange prison. Limited to a mere turn, the wonder is that—as it must have forced its way in—it did not force its way out; but here it was, after years must have lapsed, taking quite the form of the gnarled and struggling roots. With no room to develop, the tail had almost disappeared, the dorsal fin was altogether obliterated, the body had become very hard, and the scales like so much incrustation of mud divided into layers. The nose was so pushed in and the gills so enlarged, that, when looked at full in the face, it had the appearance of a negro whose face had been despoiled of its shining and oily surface. Indeed, its existence was a matter of marvel, as the water subsided and increased at times, so that in dry weather it had only the most muddy home and a semi-fluid for its subsistence. When removed, it seemed a puzzle to know whether to class this strange discovery as a reptile, fish, or anything else.

Another proof how nature has her own way of accommodating herself to the most extraordinary conditions of life, is afforded by the following incident. A lady lost her gold ring. Some three years afterwards, the loser's cat caught a rat, from which pussy had eaten the head. The neck of the rat was exposed, and the owner of the cat saw something metallic glittering on the rat's neck. On examination this proved to be the lost wedding-ring embedded in the flesh. The ring must have been carried by the old rat to its nest, and a very young rat must have thrust its head into the ring. As the animal grew larger each day, its novel collar would become a fixture. The wonder is how nature continued to permit her

living demands to be supplied through such a small circumference, yet the creature lived, was fat, and looked healthy.

Cats in their hunting expeditions sometimes meet with an untoward fate. The writer saw the mummy-like remains of one of these animals which had been discovered in altering an old building. From its peculiar appearance, the unfortunate creature had evidently been suddenly crushed flat, for, in its dying agonies, its teeth had almost bitten through a piece of wood about a couple of inches square, which was still embedded in its jaws. Some of our readers may recollect the discovery of a petrified cat in the crevice of an old stone wall, during some repairs in Newgate jail. In the opinion of a naturalist, this curiosity must have been in a petrified condition for some hundreds of years.

As some workmen were felling timber near Herne Bay, they discovered in the centre of one of the trees a cavity in which were the remains of a cat. The skeleton was entire, and some hair of a sandy colour yet remained on the skin. It is conjectured that the animal, having entered a hollow part of the tree, was unable to extricate itself, and the wood in process of years had grown around it.

Curious finds have not unfrequently been made in trees. Some woodcutters in the forest of Drömming made a strange discovery. They began to fell a venerable oak, which they soon found to be quite hollow. Being half decayed, it speedily came to the ground with a crash, disclosing a skeleton in excellent preservation; even the boots, which came above the knee, were perfect. By its side were a powder-horn, a porcelain pipebowl, and a silver watch. The teeth were perfect. It would seem to be the skeleton of a man between thirty and forty years of age. It is conjectured that, while engaged in hunting, he climbed the tree for some purpose, and slipped into the hollow trunk, from which there was no release, and he probably died of starvation.—Another mystery was found in the heart of an oak. From a tree of this kind, a large block, about eighteen inches in diameter, that had been knocking about in various yards and woodsheds, was split up lately, and in it was found an auger-hole about three-fourths of an inch in size, containing a bunch of human hair done up in a piece of printed paper. The hair was near the centre of the block, and fastened in with a pine plug. It was apparently put in when the tree was quite small, as the tree had grown over the plug to the thickness of about four inches, with the grain perfectly smooth and straight.

A natural curiosity was shown in a timber-merchant's workshop; this was the nest and skeleton of a bird embedded in a piece of beech. The timber seemed quite sound all round the cavity, and there was no sign of any aperture into it; but the timber being sawn up, the nest with the bird sitting upon it was found. The nest appeared to be built with mud, and the bird resembled a titmouse. Probably, at the lopping of a branch, a cavity was formed, and the outside subsequently grown over; but how the bird was enclosed seems difficult to imagine.

In the centre of a log of Honduras mahogany the saw revealed a large piece of honeycomb. The finder says the wax with the cells was hard,

and resembled in colour and appearance a mummy. The remains of the bees were incrustated in the wax.—Another log of mahogany was being cut in veneers by a cabinetmaker, when his attention was attracted by the appearance of a remarkable and striking profile of Her Majesty in a knot in the wood. The likeness was so true, that all who saw it acknowledged the resemblance. Had this curiosity only been discovered in the present year, we might have had Jubilee mahogany added to the never-ending list of articles so distinguished.

So often have toads been found enclosed in solid bodies, that it is not surprising to read in a Scottish paper that a servant while breaking a large piece of coal for the fire, was startled to find in the centre of the block a full-grown toad, which appeared to be in excellent health and spirits. A less common discovery was made in Birkenhead. A gentleman there was presented with a cow's tongue which appeared to be perfect in every respect. After the tongue was boiled, he discovered a piece of sandstone embedded in it, about three-quarters of an inch in length, half an inch in width, and a quarter of an inch in thickness.

Some curious discoveries of valuable articles occur from time to time. For example, a singular literary discovery was made at a monastery in the island of St Lazarus, at Venice. A pet monkey had climbed to the top of a bookcase, and was amusing itself in imitating a venerable monk, who was trying to induce it to descend. The animal, in a sudden freak, seized a bundle of papers, and breaking the string, showered down on the father's head a number of letters the ink of which had become yellow with age. They were said to be a series of letters which Lord Byron wrote to the monks of St Lazarus, with whom he had once resided.

An extraordinary instance of the recovery of a lost ring may be added to the list of curious finds. A lady when digging holes for planting celery, unconsciously dropped the ring into one of the holes. A plant was inserted, doubtless through the ring, and as the root grew, the ring must have become embedded in its substance. The ring had been given up for lost until the following winter, when the mystery was cleared up by the ring making its appearance among the soup at dinner in a portion of the celery root.

A woman employed as a rag-sorter lately met with a lucky find. While she was engaged in sorting a quantity of rags which had been in stock for a long time, having been sent from France, she came across something resembling a dress-improver, which she cut open, and found in it French coins and notes to the value of over twenty-eight pounds, which became her property as the finder.

A very opportune discovery of money occurred to a distressed person in London. A distraint for arrears of rent to the amount of eighty pounds had been levied on some premises by the landlord, for which sum the whole of the household furniture had been condemned, and placed in two vans for removal, with the exception of a chest of drawers of antique appearance, which had been left to the last from mere accident. On looking into one of the drawers, a small paper parcel was discovered, which was found to contain

one hundred and fourteen old guineas of the reign of George III. The claim was of course soon discharged, and the furniture restored to its proper position.

But perhaps as curious a find as any was that which lately took place at the New British Iron Company's Works, Cradley Heath. Amongst a quantity of scrap-iron forwarded to the works was a disused malt mill. Upon some workmen placing the mill under a steam-hammer for the purpose of breaking and preparing it for the furnace, money was scattered in all directions from the mill. The find is said to have been about one hundred pounds, and the workmen were allowed by the manager to retain the money.

### THE COXSWAIN'S YARN.

'KEEP her away a pint or so, sir—there's some uncharitable rocks off here.'

'Ay, ay, Jack.'

The tiller was pulled over an inch, the sheet squirmed in the block, the yard swung slightly, and the brown-tanned lugsail filled out a trifle more, as the *Spindrift*, flinging showers of spray diamonds off her red and blue bows as she swished through the waters, opened the narrow cove, where the rugged chalk-walls bend back a hundred yards to meet the steep roadway which leads from the country inland down to a strip of shingly beach where the waves break with a musical roll.

'The Landing looks quiet enough to-day, Jack.'

'Quiet enewf allus wi' a breeze anything westerly o' nor', responded the blue-guernsey-frocked figure in the bows. 'But you come here-aways when thar be a no'therly gale a-sending tons of water smack agin yon cliffs, and you'd see it a very perdition of a place. Ay'—removing the short cutty from his lips, and blowing a cloud of blue smoke to leeward—'I'se had some rare tussles wi' t' sea mesel', and yance was owerboord 'mong waves close to yan rocks, out of t' lifeboat, a time as I'll never forget.'

Now, Jack Crawford, coxswain of the lifeboat *Gertrude*, and owner of the *Spindrift*, was the 'uncrowned king' of that little community of Yorkshire fisher-folk, and as fine a specimen of a hardy seadog as were ever any of his ancestors who sailed in the long ships of Ida the Flame-bringer, when that doughty Viking sailed over the Swansbath, and landed at this snug cove, to win the kingdom of wild Northumbria. He had the blue-gray eyes and golden beard of the old Norseman, was big of stature and bronzed of face like a true Flameburgh-man; and as honest and fearless as they and their fore-elders have always been. Many a desperate fight had he had with the storm-spirits, when more than one gallant mate had gone down with the foundering craft, leaving wife or sweetheart to weep and tell how the cruel 'sea gat him.' So his yarns were always worth listening to; and now, eagerly invited, he told this story in the rugged, quaint dialect of the north-east coast—which is here toned down for the gentle reader's ears—to the accompaniment

of heaving surges and the softened murmur of the distant surf sobbing and gurgling in the weird caverns which here pierce the cliffs.

It was a dirty March day, twenty years and more ago, and the glass had gone down with a run before the keen wind which got up with the dawn, and brought great banks of leaden clouds out of the east; and by afternoon a whole gale was blowing, and the snow-flakes were hissing down the village chimneys and spitting into the fires on the hearths. But it was not many of us as saw much of the corner-seat that day, for there was plenty to do in hauling the cobbles up beach, which is like a house-roof for steepness, and seeing that everything was fast, and not likely to be carried away in one of the heavy squalls which whirled up off the roaring sea.

Most of us had finished by five o'clock, and were gathered to loo'ard of the boathouse at the top of the cliff, a-smoking and talking a bit, but mostly watching the steamers as were fighting their way south'ard, plunging and rolling out in the offing.

'Yon's the *Conisbrough*, an' it's time she was hauling off a bit,' said Ned Wallis, nodding towards a black-hulled boat whose red-and-white funnel showed out sharp again' the cold gray sky, and whose screw threw up a heap of foam when, every now and then, she pitched it clean out of the water as she headed for the open sea.

'Cap'n Thompson knows what he be about,' growled out old Benson.

'Hullo, mates! there's one yonder as has got her work set,' says I, catching sight of a barque which suddenly showed over the north point of the Landing, a deal too close in for safety.

'Her canvas be going—eh, Jack?' says Tom Smith, handing me his glass.

She was a smart-looking craft, and she plunged madly at the rolling seas, her tops'ls in ribbons and her yards askew, but standing up bravely under a double-reefed mains'l and jib.

'She's a beauty, poor dear, and well handled,' says Robert Barnett.

'If only she'd a dozen cable-lengths more under her lee—but she'll weather t' Head yet, if only she can hold on,' says I.

'She won't clear yon reef—she must gan about soon; and if she hangs for half a minute, she's done for,' says Dick Gibbon, going off into the boathouse, where he begins quietly seeing that all the gear's aboard and the *Seabird* ready; for it was before the bigger boat was sent here, and he was first-cox'n then, and I was second. And a fine fellow he was too, and many's the time we've been out together; but a sou'-easter killed his coble ten years come Candlemas, and he's sleeping out yonder in five-and-forty fathom, for he never come ashore.

Well, the rest of us stood watching the fight between t' barque and t' heavy seas, which were trying hard to smother her; but she flung them off, and held on bravely; and a fine sight it was to see, and we hoped as she might win. But the gale grew, and the crests of the great waves as they rolled in were cut clean off by the gusts, and blown right over the cliff-tops; and the foam-clots were lying like snow upon the hedges a quarter of mile inland.

The dusk was deepening; but she was growing

bigger and more distinct, and we could hear the torn canvas flicking like pistol-cracks.

'Sakes-a-dearie! t' ebb has begun to make, an' shoo's a lost ship,' says old Dan Gibbon, Dick's father, shaking his head.

'Ay, thar it comes.—'Bout ship,' says I. Her skipper saw she was coming fast in-shore, and as his only chance, was going about to beat out to sea, if so be as he could, and we knew it was the last dying struggle, like. Down went the helm, and we saw her coming shaking into the wind, and heard the shouted orders as the hands haul on the braces, and the creaking of the swaying yards; and then, just as the canvas begins to steady and draw—God help 'em! a big sea rose up ahead wi' a roar we could hear above t' gale, struck her slap on the weather-bow, and poured along her deck like a millrace. Her head fell off, and then her taut masts whipped savagely across the black sky as she rolled broadside on to the leaping waves.

'Now, lads, it's our turn,' cries Dick Gibbon in his cool, resolute way. 'Come, look alive—out with t' *Seabird*.'

But before he spoke, we knew what was wanted, and most of us had got our cork-belts on and were hooking the ropes to the skid—for, you see, a carriage ain't no use here, owing to the steepness of the cliff; and so we ran the lifeboat down on rollers, and in next to no time she was on the water's edge. News that the boat was for service had fetched every one from the village, and there was a bit of sobbing here and there; but our women be game, and there was none of them as wanted their men to stay. I had only been wed three weeks then, and didn't know as how t' wife would take it, when I catches sight on her on t' beach. But she comes up to me and looks bravely at me, and says: 'The guid Lord'll tak care on thee, lad,' and never a word to stop me from what she know'd was duty—I being, as I said, second-cox'n.

'Tumble in thar!' shouts Dick, as has got aboard, and is handling the yoke-lines, in a hurry to be away.

We scramble up into the boat. I stand up by my skipper aft, and the rest settle on to their thorts and get out the oars, whilst our mates as are left ashore seize the launching lines.

'Are ye ready?' sings out the cox'n.

'Ay, ay,' comes the chorus from forard.

'Then, off wi' her handsome, now!'

The ropes tauten and strain, the boat begins to quiver—slips a bit—and then, with a big rush, she takes a noble plunge slap into the breakers, sending the spray flying; the oar-blades dash into the foaming water, and the men pull like very demons.

If you've had to get a boat off a lee-shore when there's been anything of a 'popple' on, you know what sort of work it is, and how it takes a power of pulling to get well out of danger of being thrown back on shore again. But we had as fine a set of fellows as you could find anywhere, and they stuck to it like good uns; and soon the *Seabird*, rising and falling easily, told us we were safely off in deep water.

'Thar goes their gun, poor souls,' sings out Tom Smith the bowman, as a dull, booming sound rolled past the cove mouth; and a moment later we catch sight of a rocket a-trailing up a line of brightness above the cliff-top.

'Thar's t' answer, then,' Ned Wallis says as a second screams up to the black clouds from the boathouse astern.

'If only they can hold on till we get at 'em,' says Dick to me in a low tone. 'But look thar, and you'll not have to guess what it's like at t' other side.'

I looked ahead as he spoke, and saw a huge breaker dash itself straight at the wall of ragged rock, which we had to pass within a dozen yards, and then spout itself into hundreds of hissing tongues of foam high in air, to fall back into the churning surf with a deadly rush. I tell you, to look at that caldron, and feel the fierce waves shake the boat fore and aft, and see them leap up over the stem, and pour in green seething cataracts off the bow air-case, was enough to shake you a bit. But though Tom Smith was almost drowned at his post forard, and we were often up to our knees before the tubes could free the boat from the water, and drenched with the spray, yet we held on; and it was a treat to see how she drove through that sea.

Now, there's a lot of talk that these self-righting lifeboats are crank, and some of the newspapers cry out again' them, and say they are a fraud and a snare. All gammon, says I! Why, what does a newspaper chap as sits writing all comfortable afore a fire know what a lifeboat can do? They mostlins get their ideas from some of them inventing fellows, who can always improve every blessed thing going, if you'll believe 'em, as cry out that the self-righting boat is a bad design, and they could make it quite safe, and so as she'd never roll over. Now, there's a lot of pints needed in a lifeboat besides those as have to do with upsetting. She must be easy to pull with oars by a dozen men, and at the same time stand up handsomely under sail, if so be as t' wind serves; she must be buoyant enough to float her crew and passengers, if she gets stove in agin' a wreck or rock; she must clear herself of water as she ships the water, for there's plenty to do for all hands without wasting themselves and time in baling; she must right herself when she goes over, for with all this tall talk, there's no way of making an open rowing-boat as won't upset at times; and then, she must be light and handy enough to be taken about and launched off a beach. And when you've got all these, you've got somewhere near a perfect boat; and I make bold enough to say as you've got 'em all in the Institution's boats. And as to all that yarn about 'em not being 'stiff,' why, bless you, there are fellows as think and call themselves boatmen as will run broadside on to a smashing sea, and then sing out because in course they heel over—as what craft wouldn't? Fact is, sir, a lifeboat is like a thoroughbred horse—put a duffer aboard, and he can't handle it, and gets thrown, maybe, and then comes and says it's the fault of the animal. Lifeboats, I don't deny, want skilful handling, and then they be as safe as winking. Now, I've been cox'n on this station for twenty years, and out in all sorts of weather, and I says, give me a good crew—of sailors, mind you, not longshore lubbers in sou'-westers—and I'll back us to go anywhere at any time in the *Gertrude* there, or any other self-righting boat as belongs to the National Lifeboat Institution,

you likes.—Avast, though; I'se forgetting the yarn I was spinning.

Well, we fight our way on somehow, and at last opens the wide sea—one great stretch of mad, tossing waves, enough to make any chap wish himself ashore. There was a little group of folk up on the pint as had climbed there to see us pass; and as we forged out of the cove, we could just see them in the gloom, and they gave us a cheer, which sounded feeble enough in the din of the gale; but it put new heart in us all, and we meant having the poor fellows off the barque.

'Thar she is!' hails Tom, pointing to where the sea was all white, like tossing, whirling snow-drifts, and where the breakers were raging over the sunken rocks; and sure enough her hull showed out like a long black bar just beyond.

'Stick to it, my lads—she's got her anchors down, and, please God, they'll hold till we can fetch her,' says Dick Gibbon, as we begin to meet a three-quarter tide a-sluicing along. 'Show them a glim—it'll cheer them a bit.'

So I got out the signal-box, and struck a fuse, and it splutters and spits, and then shines out like a big star; and we hear a faint hullo away to loo'ard, and know they've seen us.

Dick works out with the tide, and we get steadily well up to wind'ard, and to where he and I reckon we may venture to drop down to the ship; so he watches for a bit of a smooth, and then over goes our rudder; and the port oars pull us round like a top.

'They be worth saving, yon chaps, for they're making a good fight for t' ship, and not giving in yet. You bet they be English; a French or German lot would be a-howling and a-ringing of their hands, instead of cutting the masts away,' I says, as suddenly the foremast went by the board, and we saw men hacking at the mainmast.

'Stand by with t' anchor, Tom!—All clear for'ard!'

'Ay, ay,' answers the bowman, steadying himself to heave.

'Let her go!' shouts Dick, keeping his eye on the wreck as the boat drives towards it. 'Hold her up a bit, lads; smartly now.' A dozen strong strokes stop her sternway, and the anchor holds. 'Pay out—steady!'

The cable runs rapidly over the stempost roller, and we drive quickly on to her starboard bow; but the distance between scarcely lessens, and the loud hail, 'We're dragging,' comes from the ill-fated ship.

'Belay that cable,' roars Dick; 'and look handy with that heaving line, Jack.'

And whilst Tom and his mates take a turn round the bollard, I nips up the loaded stick, and flings it with all my might at a group of men on her fo'c'sle, and it falls right among them. In next to no time they had bent on a rope, and we haul it aboard and make it fast smartly enough, for ten minutes we knew would see her on these dreadful rocks.

'For your lives' sake, look lively!' Dick bawls through his trumpet.

But, poor creatures, they need no hurrying, for they see it's all up with the ship; and a man seizes the line and drops himself along; and another and another come, and we have them safe inboard.

'Drop a bit nearer; we've got a woman aboard,' calls out a voice from her bows.

'Daren't do it,' we shout in reply.

There's a bit of a delay; and then a man stands out and seizes the rope, the figure of a woman slung to him, and he begins to come hand over hand along it, and gets half-way, when all at once a great sea breaks right over us, filling the boat, and then rushes on, burying the poor souls on the rope deep beneath it. With a heave the *Seabird* rises up bravely, the rope tautens, and lifts its dripping burden clear; and we all give a cry, for the woman's gone, and we see a dark something show for an instant on a wave-top, and then disappear in the boiling surf amongst the rocks. We drag the man in half drowned. But time's too precious to ask questions, and we think only of getting the rest off their doomed ship.

The captain comes last; and when we help him in, he has a little girl-baby in his arms, all done up in a big white shawl, and this only just in time, for the line snaps like a piece of packthread; and then we knew her anchors had dragged clear away; and sure enough, before ever we had hove our own up, we see her give one tremendous roll, then a great heave, and crash she goes right on to the reef-end, and good-bye to her.

'Up with a corner of t' lug,' is the order; and we begin to stagger through the seas, and race the hissing surges towards the shore under sail. As we get near the mouth of the little bay, the man as had been so nearly done for when the sea buried him and tore the woman away, comes to, and begins to moan for 'Lettie'; and the cap'n of the barque just shoves the little lass into his arms with never a word.

Then the poor chap opens his eyes and looks down the boat with a dreadful earnest stare, and cries: 'O God, where's Lettie?'

The cap'n says nothing, and turns away his head; and then the other seizes hold of Dick's arm and cries fiercely: 'Where's my wife? Tell me!'

And Dick dashes his oilskin sleeve ath'ort his eyes, and then pints up aloft, and says in a hoarse sort of voice: 'She's there, mate!'

He gives a wild, unearthly sort of scream; and then, before ever we guesses what's up, he seizes the baby in one hand, and pitches himself clean over the gunnel into the tumbling waves. I catch sight of the tiny thing for a second close to the boat as we rush on, and make one desperate grab, catch hold of it, and pitch head first over into the black water myself. I clutch like mad at the side as I go over; and as luck, or something better, maybe, would have it, my fingers click one of the life-lines, and I grip it tight, and hold on like death; the cold water pours over me as the boat tows me through. The pull on my arm was something awful; but they soon drag me in by the collar, with the baby in my other hand; and I had just time to see it was alive and to shake myself dry a bit before we get among the rollers and crash on to the beach; and a score of lusty arms seize the *Seabird* and hold her up agin the backwash and haul her out of the surf.

The folks all come crowding round; but the coastguard keep them back; and the eleven sailors with the mate and cap'n are carried off to the *King's Arms*. But I keep the little mite

as I'd saved, and just put it into my wife's arms; and away she flies with it, and never a question to ask.

When I get home, after having helped Dick to stow the boat and the gear, I find a dozen neighbours all a-looking and talking of the poor ba'n as was sleeping peacefully on Mollie's lap; and then, of course they want to know all about it; and as I don't know, I go off to see the cap'n.

The wrecked ship was the *Evangeline* of Bristol, from Leith to London in ballast; and the poor chap as had jumped overboard was a passenger; but no one knew his name. He seemed a gentleman, but very poor, and had begged a passage from the kind-hearted skipper for himself and wife and baby; and it was his wife as had got drowned, and the baby as was at our cottage.

When I tell Mollie, she cries a bit, of course, as a woman will, and then sets to hugging the bit of a lassie, and vowing she'll be its mother; and nothing would make her think or say different. Well, the parson wrote to all the papers, trying to find out any relations; but none ever came, and so we kept her.

The owners of the *Evangeline* behaved very handsome to us, giving each man of our crew a fiver; and Dick and I a watch apiece; and the Institution they vote me a medal for saving the little un. And they send one hundred pounds to parson for her, which he said he'd give to me and the missus when she was grown up, for our care on her. But we tell'd him straight we'd not touch a penny of it, for she was just like our own to us; and we called her 'Eva' after the ship she was took from. And now she's just the bonniest, cobbiest lass in the village; and she and Jack, my eldest lad, have made up their two minds to be spliced when the herring season's over; and she's having a new coble, and a beauty too, built for him out of her bit of brass; and t' rest of it's for a rainy-day. You'll hear her in t' choir at church on Sunday, and you'll see her, likely, when we land, for she's mighty fond of the beach and coming to meet me; and she can tell the *Spindrift* far enough.

There, sir, that's the yarn; and if you're willing, we'd better be running for home, as the tide has begun to make and the breeze seems like falling.

#### ANCIENT GREEK ART.

A modern Greek publication gives an interesting account, with a drawing, of a curious monument lately discovered at the Acropolis of Athens. This piece of very antique Greek art consists of a bronze relief, made up of two thin plates, each of which represents one side of the figure, and these two plates are fastened together with small *nails*, not rivets. The relief, which is not thick, is almost flat, and on one side there is the appearance of slight modelling, which, singularly enough, does not correspond with the other side. In fact, the working of this (the right) side is altogether superior to that of the other. On this side, too, traces are still to be seen of gold on the hair and garment. Probably the whole work was originally gilt, which, when first executed, had doubtless a beautiful and rich appearance. The figure is supposed to represent the goddess

Athene. The figure wears the *peplus*, or long robe worn by the women of Athens, and reaching nearly to the feet, and the *chiton*, or coat of mail, so commonly given to Minerva; but she has no helmet. This latter she may have carried in her left hand; but this part of the work is much damaged by rust. The gold-work which yet remains shows evident traces of the action of fire. The style and execution of this bronze relief are far superior to, and infinitely more natural than, any other of the large number of female figures by which it was surrounded when discovered.

Whilst on the subject of classical antiquities, we may draw attention to the addition lately made to the British Museum, consisting of a very fine large terra-cotta sarcophagus, having on its lid a beautiful life-sized figure of a reclining woman. Everything about this figure is coloured to life—the robing, the ornaments, the flesh, all coming out with striking reality. The date of this work is considered to be about two centuries B.C. It bears a close resemblance to the famed sarcophagus preserved in the city of Florence, which is of the same date, and is celebrated for its extreme beauty. The inscription, as published by the British Museum authorities, gives the names of the lady as 'Seianti Thanunia Tles-nasia.' The work is very ancient Italian, and being rare, is all the more interesting.

#### WEALTH UNTOLD.

By CHARLES MACKAY, LL.D.

SEEK your treasure, and you'll find  
It exists but in the mind.  
Wealth is but the power that hires  
Blessings that the heart desires;  
And if these are mine to hold  
Independently of gold,  
And the gifts it can bestow,  
I am richer than I know!

Rich am I if, when I pass  
'Mid the daisies on the grass,  
Every daisy in my sight  
Seems a jewel of delight!  
Rich am I, if I can see  
Treasure in the flower and tree,  
And can hear 'mid forest leaves  
Music in the summer eves;  
If the lark that sings aloud  
On the fringes of the cloud,  
Scatters melodies around  
Fresh as raindrops on the ground;  
And I bless the happy bird  
For the joy it has conferred;  
If the tides upon the shore  
Chant me anthems evermore;  
And I feel in every mood  
That life is fair and God is good!  
I am rich if I possess  
Such a fund of happiness,  
And can find where'er I stray  
Humble blessings on the way,  
And deserve them ere they're given  
By my gratitude to heaven.

## AN OCTOBER WALK.

THE lake I love is a homely level of water embosomed amid trees and content to mirror the sky, but it is the dearest in the world to me, for it is the shining face of a familiar friend. The curving path that leads me round its verge is a resting-place of which I never weary. Here I have pursued the silvan spring and loitered with languid summer; I have romped with the merry autumn gales, and fought many a rough and healthful battle with the keen north wind; and to-day I tread the path, carpeted with a prodigal wealth of fallen leaves—tenderly, because I love it; it is akin to me, for am I not also earth from the bosom of Mother Nature? Here I have followed the procession of the Seasons, feeling that I was the invisible ghost, and they the tangible reality; and I have tasted of Nature's secret elixir of life, finding in the precious draught an existence of joy vague and unexplainable, yet real and boundless as this brisk October wind.

Nature's ways—her revelations are endless; familiarity with her breeds no contempt, for she is ever the leader and the wonderful revealer; although she seems so near, she is for ever beyond our reach; as far as we are capable of going, she will lead us, but still above us there will shine virgin heights unscathed.

The secret of Nature's influence is—peace. I feel it the moment I open this little green gate which leads to the lake. The 'click' of its latch is a fairy talisman, changing the shoes in which I have come through the world's mire into rarer slippers of glass than ever Cinderella wore. No worldly dust can defile my feet here, for this is the silent home of pure tranquillity. I turn down past the yews, where, in the spring, a wren had her nest. I used to pull down the sombre screen of boughs that concealed the mossy structure, to observe the little brown creature, who sat on her eggs—in spite of my approach—with a trembling courage that amazed me. She would even let me touch her shrinking wing,

but she would not fly away; and one day, when I was over-persistent in my attempts to gauge the depths of her courage, she turned upon me a pathetic look that made me feel abashed; for I recognised in its timid appeal the mother's instinct, which brought me down to the level of the tiny wren, and made thenceforth her nest as sacred as my home to me.

Now the expanse of the lake lies before me, and my ears are greeted with the monotonous, creaking solo of the coots. The sun is glinting on their white under-feathers as they dive into the shining water; and they seem very busy, although somewhat shrewish to my mind, in the management of their household affairs.

Rustling grasses, swaying in the wind, gracefully fringe the brink of the lake; and the bulrushes stand stiff and aggressive among their warlike reeds, with blades grown somewhat rusty now that their fighting days are nearly over; and tall stalks of spotted hemlock are seen beside the seeding umbels of cow's-parsley among the sear and rustling sword-grass. The mellow sunshine seems to radiate from this group of horse-chestnut trees, now resplendent in golden autumn tints, and dropping jagged nuts among the dewy grass; the wind, too, has a special delight in the radiant group, and tosses about the golden fans in a frolic, whirling them from the trees far along the russet path. Light and motion and beauty are visible here, and something more, for to me the horse-chestnut tree has always appeared as specially symbolic in Nature's language. The alphabet of an unknown or lost tongue is visible among the branches, for these are indented at intervals with the semblance of a tiny horseshoe, studded with nails of the mystical numbers five or seven; and these figures are again repeated in the finger-like points of every leaf. I wonder if the Druids knew it? To them, it would have been a sacred tree.

How different is the autumnal from the summer sunshine! The latter is high and clear, with a colourless brilliance which cannot be tolerated out of the shade; but mellow autumn throws

a veil over the sun's face, so that man may gaze upon the splendour and yet live. A weasel crosses the path, arching its cruel neck. I can distinctly see its tusk-like teeth. It is hunting for rabbits; but, at my approach, it hides among the grass near the water, and I walk quickly past the lurking evil. A robin comes out of a rhododendron bush and hops quietly before me, pausing now and then to sing a little sibilant note of pleasure; and I follow his sober route gladly, for he is an old acquaintance. In this little harbour beneath the firs I have kept many a wintry tryst with him. The icicles hung then round the sloping eaves, the low red sun shining upon their fantastic forms, and the snow lay deep and crisp; but I brought my dole of crumbs regardless of the woful (unfulfilled) predictions of fireside folk; and now I am rewarded by this steady friendship with robin, of which I am so proud.

This aisle of brilliant beech and mottled elm is the loveliest part of my walk. The sudden sunshine strikes with a white radiance upon the silvery pillars of the beeches, and the bright copper hue of the leaves upon the overhanging branches is reflected far upon the rippling lake—a medium which does not quench but rather intensifies the glow. The swan—surely the ‘oldest inhabitant’ here!—is floating in lonely majesty through the reflected autumn tints, a white speck upon the burnished mirror. The breeze is whirling the beechmast along the path before me; and skirmishing companies of brown crackling leaves are rustling away in wind-driven flight, emitting a whistling metallic sound as they flee. A squirrel comes tumbling along the sunlit way, like a ball of autumn leaves which has suddenly become possessed of life. Now there are two, chasing each other in a spiral progress up the trees with a curious gurgling sound like unctuous laughter. What a mad and rigmarole scamper! Now they glide up the smooth gray beeches, their tails being seemingly superfluous encumbrances; but, with a sudden spring, they turn them into wing-like balances, and disappear within the branching screen of an elm.

This windy whirl of hurrying clouds, of sudden sunshine, of scattered leaves and flashing squirrel-flights, imparts to me a portion of the universal buoyancy of motion. I, too, participate in the brisk alacrity of this October day; for the wind has a note for me, and the sparkling water a smile. This is the place of my thoughts, the abode of the spirit of Nature, the path of moral and spiritual growth, the treasury of beneficent counsel. The temperate light of the sky, gleaming far above the swaying boughs, marks only the limit of the physical eye, for the soul that looks out of it owns no limitations; the spaces which it traverses are boundless, though still it abides within the veil of man's visible frame.

Still I follow with unwearied feet the silvan curve of the lake, passing beneath stalwart oaks not yet at the zenith of their autumn splendour,

but bearing here and there a broad daub of orange or crimson amid the green clusters, as if Nature, like an artist, were groping for her key of autumnal colour. The path becomes mossy now, and broadens into an orchard-like beauty of gently sloping knolls, crowned with ancient hawthorns; and the lake, which is near its source, is almost hidden amid a tangled mass of water-weeds and grasses. A faint blue haze hangs before the distant upland trees, which seem to crouch together before the wind. The haws are ruddy on the almost leafless thorns, and many a nest, deserted now and sodden, is made visible. Here is one that belonged to a pair of chaffinches or ‘shilfies,’ snugly placed in the very heart of a bushy hawthorn. The blithest bird in Raith sang on these branches; he was always singing to cheer his patient mate within the nest, hidden then in a rosy cloud of hawthorn blossom.

Upon the sward beneath the hawthorns the dew still lingers, begemmed with diamonds the scalloped leaves of the green ladies'-mantle, which grows here in great profusion; and amid the russet blaze of the bracken there twinkles a network of filmy gossamer. The azure harebell, the last of the flowers, trembles on the verge of the fern; and a few belated blossoms of the red-campion still flaunt their tawdry charms.

I have now reached the rustic bridge, beneath which wimples the nameless burn that feeds the lake. It is a tranquil little streamlet, not much given to indulge in stormy moods; but to-day it is brown and foam-flecked by recent heavy rains. I always pause to look down into the stream; and when the water is clear, if I take care that my shadow does not fall upon the shining surface, I can see the trouts gliding about, and the long black eels winding their slippery way among the stones at the bottom. This is a favourite haunt of the birds, which are ‘tip-tipping’ and flirting about the brink of the singing water.

But now I come to a sombre bit of my walk, where yews stand sentinel on either side, their gloom made more apparent by the gleaming waxen red of their green-stoned berries. In the leafy summer-time, I incline to despise these evergreens; but the robins and the starlings love them when the trees are bare; and the wind-harassed leaves find a quiet grave beneath their spreading boughs. I get a glimpse of the lake once more as I emerge from the shade and pursue my way past a grove of tall firs, whose heads are lost in a dusk obscurity. Here the nettles grow rank amid fallen cones and brown fir-needles; and from out the dim recesses a pheasant calls, while another rises almost at my feet, flying heavily away with a startled ‘whir!’ the lovely green lustre of its neck plainly visible.

Beneath some straggling rhododendrons, a semi-circle of clammy fungi has sprung, forming the half of a ‘fairy-ring.’ One can fancy the dainty figures of the woodland elves seated beneath those grotesque umbrellas, their romantic reign marking an epoch in man's progress, when, having survived his first blind terror of Nature's primal forces, he sought to express, in the quaint forms of fairies and other woodland spirits, the mysterious feeling of kinship with Nature which was slowly awakening within him.

Now I pass the thundering waters of the sluice which relieves the lake and sends the surplus flood to turn the miller's wheel; and I pause for a moment to gaze upon the wonderful tints of the beeches across the reflecting lake. I reach a veritable 'crooked corner' where two laburnums being intertwined in their plant youth are dragging each other to a crabbed and certain doom. These are the victims of man's caprice, for Nature would scorn to perpetrate such a fraud upon beauty. I stoop my head, and hurrying past the unlovely sight, I come upon the pathetic remnant of a once graceful birch, now the prey of a wandering parasite, for the ivy's fatal beauty festoons the barren trunk, which, slanting far into the lake, seems to anticipate its grave. By its side a gaunt and piebald sister-birch droops forlorn branches; and a gnarled oak stretches one long, dying arm towards the rippling, living lake. Truly they form an enchanted group! They look like human beings transformed into this uncouth guise by some grimly humorous witch of yore.

But my leisure hour has almost fled, and I must hurry on between yews and hollies and lustrous rhododendrons, startling many a black-bird from its quest for food among the fallen leaves. I pass the rustic wooden house bearing the sign of two curling-stones, and familiar to the ardent lovers of the 'roaring game,' and now once more I reach the little gate. I open it, and turning, take a last look along the vistas of the trees. I close it again with a lingering touch. 'Shut, sesame!' I whisper, 'and guard my boundless treasure!'

## RICHARD CABLE,

### THE LIGHTSHIPMAN.

#### CHAPTER XLVIII.—A REPETITION.

ONE Sunday when Richard Cable was at home, after he and his children and mother had dined, he said: 'Now, my dears, we will all go out and walk together, and see the place where my new house shall stand with seven red windows.'

Then the little maids had their straw hats, trimmed with blue ribbons, put on, and their pinafores taken off, and they marched forth with their father on the road towards Ross-carrock. It was winter, but mild and warm; and the sun shone; red beech and oak leaves lay thick in the furrows and sides of the road, and under the ash-trees the way was strewn as with scraps of black string. The leaves had rotted, leaving the mid-ribs bare. The starlings were about in droves, holding parliament, or church, or gossiping parties. The holly, grown to trees in the hedges and woods, was covered in the hedges with scarlet berries; but bare of fruit in the wood, where the shadow of the oaks and beech had interfered with the setting of the flower.

When Cable came to the coveted spot, whom should he see but Farmer Tregurtha! In fact, from his house, Tregurtha had heard the chattering of the little voices in the clear air, just like the chattering of the starlings, and some one had said

to him: 'Uncle Dick be coming along wi' all his maidens.' Then Tregurtha had walked across the fields to meet him.

Among the Cornish, any old man, or man past the middle age, is entitled Uncle. Now, Richard had not attained the middle point of life; but the St Kerian folk did not know his age, and thought him older than he really was, partly because he had so large a family, but chiefly because his trouble and his gloomy temper had given a look of age beyond his years.

Things had not gone well with Tregurtha. He had been engaged in a long lawsuit with Farmer Hamlyn about a right of way, and had lost, it was whispered, several hundreds of pounds, because he was so obstinate that he carried his case by appeal from court to court. Cable knew this very well, and would not have been the Cable he had become if unready to profit by it.

'Hulloh, uncle!' called Tregurtha. 'Glad to see you home again, and in the midst of your stars, as the sun among the seven planets.—Ah! folks always say that children bring luck, and a seventh maid is born with hands that scatter gold. Luck has hopped off my shoulders and lighted on yours.—Have you still a fancy for Summerleaze?'

'Where law is handled, luck leaks out,' answered Richard Cable. 'Come into the road, and we'll have a word together.' Then he bade the seven little girls hold hands and walk on beyond ear-shot.

They were some time together; but before they parted, Cable had agreed to purchase Summerleaze and to give for it a hundred and fifty pounds. Tregurtha was glad to get that price for it. Thus it was that the land became Cable's, and the first step was taken towards the fulfilment of his dream and the realisation of his ambitious scheme. But he was not yet prepared to build; for that he needed more money.

Once again he was at Bewdley, and he went there with the determination of seeing Josephine, without allowing her to see him; but when he was there, some indistinct feeling held him back, and he went away without having caught sight of her; but he had made inquiries concerning her of his landlady, Mrs Stokes, without appearing to interest himself especially about her. No sooner was he away, with his face turned homewards, than he regretted his lack of courage, and made a fresh resolve to see her.

And now that he was possessed of land, he became more eager after money and more adventurous in his speculations. He was never at rest. He denied himself the supreme pleasure life had for him—the pleasure of being at home with his children. He travelled over the north of Cornwall, from Bodmin and Camelford to Stratton, and through the poor land from the Tamar to Holsworthy and Hatherleigh, buying stock and sending it off. He purchased all the calves he could in the dairy country and sold

them to the stock-rearing farmers, and the money was never idle in his pocket; he turned it and turned it, and it multiplied in his hands.

Then Cable went to Mr Spry, the mason, and ordered him to build the house. 'I will have it a long house,' he said. 'The ground rises so sharp behind, that it cannot be more than one room deep, and so I will have seven red windows up-stairs—three on one side and three on the other, and two below to right and two to left and two shams, and over the door in the middle a window. That will make seven windows in the front up-stairs and four below; and on one side of the door shall be the dwelling part for me and my children; and on the other side of the door shall be the kitchen and back-kitchen; and there shall be a great sort of lobby and hall in the middle, where the children can romp of a rainy day; and because the land falls away so rapidly in front, there must be a flight of stone steps up to the main entrance.'

When this was settled, away went Richard Cable again, and now he went to Bewdley, and as he travelled he thought: 'I should like her to see my land and my house that I am building, and how I am going to make myself a gentleman and all my maidens to be ladies, with no help from her, all out of my own work with my head and hands.'

In this frame of mind he arrived at Bewdley, but without having come to a decision whether he would see her or not. Perhaps, some day, when Red Windows was finished, he would have a large photograph taken of it, with the colours put in, green for the trees, and red for the windows, and send it to her by post. When she saw the picture and read under it, 'Red Windows, the property of Mr Richard Cable,' then she would learn how great and rich a man he had become, and how he thrived when separated from her.

He was at the Bewdley tavern again, and he looked at Mary Stokes, and told her mother that the girl was growing into a fine little woman. 'Down in the west where I am,' said he, 'there are no girls, only maidens. If you speak of a girl, they either don't know what you mean, or think you mean something insulting. I suppose, now, in a little while you'll be thinking of getting Mary a situation in the great house? What will she take to?—housemaids' work or the kitchen? The nursery is out of the question, where a baby's voice has not been heard for over half a century.'

Mrs Stokes shook her head. 'No, Mr Cable, my little girl don't go there.'

'But why not? You're a tenant under the lady.'

'I shouldn't wish it,' said Mrs Stokes mysteriously. 'I don't mind saying as much to you, as you're a stranger, and can't or wouldn't hurt me with Mr Vickary or the old lady—but, I can't afford to send my Mary there.'

'Can't afford! Is it like an appointment in the army, more cost than gain?'

Mrs Stokes again shook her head. 'You see, Mr Cable, things in that house ain't as they ought to be; and I wouldn't have my child there not for a score of pounds. The old lady, she's good and innocent, and thinks she'll make all the world about her into Christians; but,

Mr Cable, that house is not a Christian household outside of her sitting-room.'

'What do you mean?' asked Richard, uneasily working on his chair.

'I don't mind saying it before you, because you're a stranger, and wouldn't hurt a fly, let alone me; but Mr Vickary is a bad lot, and he leads the old madam by the nose. Bless you! if it was only picking and stealing, I'd shut my mouth and say nothing, for what is riches given to some for, but that those who haven't may help themselves out of their abundance! But—she began to scrub the table—'there be things go on there, or is said to go on, that would make decent mothers shy of sending their servants into that house.'

Richard's face became red as blood, and his hair bristled on his head. If Mrs Stokes had looked at him instead of looking at the table she was scouring, she would have been startled by his face.

'Why, Mr Cable, when you come to think of it, it is wonderful what a lot of evil is done in the world by them as intend to do good—I do in truth believe, more than by the out-and-out wicked ones. And I take it the reason is, your well-intending people begin their bettering of others by taking leave of common-sense themselves.—There comes Mr Polkinghorn; don't say nothing of all this to him.'

'How do you do, Mr Cable? How are we, Mrs Stokes?' asked the pleasant footman entering, rubbing his hands. 'A little frosty to-night. I shall be glad of brandy-and-water hot, please, and sugar.—How go the calves in the van, sir, and the kids at home?'

'And how is my namesake, Mr Polkinghorn?'

'Oh, the lovely Cable!' He shrugged his shoulders. 'I don't think she'll be much longer with us.'

'What—dying?' The colour deserted Richard's brow.

'O dear, no! Very far from that—a little too much alive, that is all.'

'I do not take your meaning, Mr Polkinghorn.'

'I have a tendency to cloudiness,' answered the flunky. 'I have generally been thought a wag.—Thank you, Mrs Stokes. This is real cognac, I hope, and the water boiling?' Having been satisfied on this score, Mr Polkinghorn poured himself out a stiff glass. 'The cold settles in the stomach, Mr Cable,' he explained.

'What about my namesake?' again asked Richard, whose face was serious, and who sat with his hand to his head, looking across the table at the footman.

'Oh, as to Miss C.—we'll use initials, and that obviates the chance of giving offence—she's a high-flyer.'

'She is proud and disdainful, you mean?'

'That she is. But that is not what I allude to.' He took a pipe and filled it with tobacco. 'You see, my dear sir, we've had our captain staying with us.'

'Who is your captain?'

'The old woman's nephew, Captain Sellwood.' Cable's fingers twitched; the nails went into his brow.

'I don't myself give credence to all I hear;

but there's a talk that the lovely C. is setting her cap at the captain. That's a pun, you will understand.'

Cable did not laugh.

The flunky explained: 'I'm a joker.—I don't pretend to say where fact ends and fiction begins,' Mr Polkinghorn went on to say, 'because what I have heard has come from the lips of old V., and old Mr V. can colour matters to suit himself, just as a blanchmange can be made pink with a drop of cochineal; or, if you prefer another similitude, he can flavour his facts to his taste, as you can any pudding with ratafia or vanilla. There must be something to go upon, or you can't colour or flavour at all. That stands to reason.—Are you particularly interested in Miss Cable?'

'She bears my name,' said Richard sternly.

'Ah, quite so! I understand the feeling. I myself could not endure the thought of a Polkinghorn doing a dirty act; but—I don't believe a Polkinghorn could so demean himself—the name would hold him up.'

'What is the fact, coloured or clear?'

'Oh, I can't say. V. will have it that Miss C. has been carrying it on with the captain, and there has been a rumpus accordingly; and the old woman has had to interfere, and—I do not believe that she will let the beautiful and fascinating C. remain much longer with us—that is what V. says; but V. has never taken warmly to the C.; she has been short with him.'

Then Cable stood up, and without another word, went out of the inn—he went out, forgetful that he had not his hat upon his head, and he walked hastily in the direction of Bewdley Manor.

How wonderful is man's life! It turns about like a wheel, and he does those things to-day which he did some time ago. But no—not those things exactly. They differ in particulars, but in direction they are the same. His life moves in spirals, ever reverting to where it ran before, but never quite going over the same ground. On one memorable evening Josephine had been in Brentwood Hall, and Richard had run to bring her thence, hatless, coatless, breathless. Now he went, by night, to another great house, also through a park, hatless, breathless, but not on this occasion coatless—there was the difference. On that former occasion, Josephine was the most honoured guest in the great house; now she was the least esteemed servant in this great house.

For many thousands of years men believed that storms blew over their heads, tearing up trees, unroofing houses, flashing with electric bolts, pursuing a direct course. They held that storms never swerved to one side or the other till they had expended their violence. Now we are told that no storm travels thus—they all move in a rotary course; they whirl across the earth and sea like aerial spinning-tops. We have supposed, and we still suppose, that men go straight courses from birth to death; but is it so? Is not the spirit of man a blast of the Great Spirit that sweeps along through life in a succession of revolutions? Do we not find, when we look back at our own past history, that we do again and yet again the same things—that again and yet again we drive in the same direc-

tion one day, and in the opposite on the morrow. I myself, when I shut my eyes and hold my face in my hands, can hear the spirit within me whirling and humming, and eager to sweep me away into some folly that I committed a few months ago, and vowed then I would never commit again.

We think the same thoughts, as we speak the same words, and, alas, tell the same old stories, and crack the same old jokes, day after day, in our little teetotum spin. What an amount of impetus there is in our movement; what a whirl, what a hum we make!—but what a little movement forward in the straight line there is for the vast amount of rotary hurry and noise. On this evening, Richard Cable was doing very much the same thing he had done on another evening, the memory of which still scorched his brain; and he was doing that which he had resolved never to do again. He did it with a difference. We all do our little rounds with a difference. He went this time with his coat on his back; but he was as hot, and as agitated, and as breathless as before.

See what an advance the man had made! He went in his coat; though, I grant, he went this time in his coat chiefly because he had his coat on his back when the impulse started him to go. Still this was an advance, a distinct advance.

Richard Cable stood still when he came to the house. He tried to collect his thoughts and resolve what to do. But the dog in the back-yard began to bark furiously, and its bark distracted him; he could not gather his ideas. He knew that Josephine was in a place which she could not remain in without some taint adhering to her. She was under the same roof with the man who had loved her and had proposed to her; a man of her own class, a man whom she had known for long. Richard put from him at once the thought that she was, what the footman said, consciously 'making up to' the captain; but he was by no means sure that unconsciously she might be drawn towards him.

On that other evening when he had run to Brentwood, he had been unable to gather his thoughts; but he had seen clearly one thing—that his wife ought to be with him in his great trouble; so now, his mind was confused, yet one idea shone out clear through the fog of thoughts—that his wife must not be allowed to remain another night in Bewdley Manor. On that other evening, he thought of himself; on this, he thought of her. Then, he it was who needed a stay; now, it was not he, but she. So, with this one idea fixed in his mind, with his ears full of the noise of the dog barking, and with the throb of the blood in the pulses in his ears, he went into the house. But how he encountered the butler, and where and how he made known what he needed, and how he was brought up-stairs and confronted with Josephine and Miss Otterbourne in the great state drawing-room, that he never was able to remember distinctly. He saw everything about him through a haze, as though smoke were rising, or the carpet steamed like a ploughed field in the morning sun. He saw his wife, but she seemed to him as afar off—as if he saw her through a glass. He made no effort to collect his thoughts; he formed no resolution as to the course he would pursue, but he said: 'I have come for

my wife. Give her up to me. This is no place for her. I insist on her coming with me—at once—wherever I choose to take her.'

Then Josephine said: 'Richard—I will follow you wherever you go.'

### ON SOME DISCREDITED NOTES.

STRANDED by the waves of chance on the pages of the scrap-book now before us are a few documents, each once possessing certain value, though now quite worthless, and each telling a very different story from its neighbours. The earliest in date is a bill of exchange, granted at St Helena on the 31st of August 1801, while yet that island was unknown to fame. It is in manuscript, and is addressed, 'To the Honourable the Court of Directors for Affairs of the United East India Company, London;' these 'Honourable Sirs' being requested to pay the sum of fifty pounds to the order of the person named in the bill, 'for the like sum this day paid into your Treasury here.' The paper is clean and in excellent preservation; the writing, including the signatures of the drawers—F. Robson, W. W. Doveton, and James Curtis (!)—as clear as on the day it was written; but all the parties to the transaction, the once powerful East India Company not excepted, 'have had their day and ceased to be.' And the island of St Helena itself, becoming fourteen years later the cynosure of all the eyes of Europe, and remaining for six years more a constant worry to the British authorities, has again retired into its original obscurity. Much has happened since this prosaic piece of paper came slowly Londonwards in some old East Indian man.

Most curious is the history attached to the document which we now examine. It is a duly engraved bank-note, issued more than sixty years ago from the works of W. H. Lizars, an Edinburgh engraver. But the name of the bank and the coinage of the note are equally strange to Scotland and to Britain. This note is dated from 'St Joseph;' and it asserts that 'On demand, or three months after sight, in the option of the government of Poyais, One Hard Dollar will be paid to the bearer at the Bank Office here'—'here' being the above St Joseph. The signatures of the manager and accountant are not given, because this bank-note has never been in circulation, and consequently its blanks have never been filled up. But in two places it bears the legend 'Bank of Poyais;' it is embellished with a coat-of-arms, doubly supported by a brace of Red Indians and of unicorns; and down in the left-hand corner stands the announcement, 'By order of His Highness Gregor, Cacique of Poyais.' Strange medley of names! Edinburgh and St Joseph, bank-notes and caciques, suggestions of the ancient Caribs and Rob Roy—all curiously intermingled. How many modern maps will show us the whereabouts of Poyais, and who shall declare the generation of 'His Highness Gregor?'

One may have never heard of this personage, or of his kingdom either, and yet not be very

ignorant. The position of both, however, is sufficiently explained by Anderson in his *Scottish Nation*, who tells us how 'an adventurer of this name, Sir Gregor Macgregor, at one time rendered himself remarkable by his exploits in South America, and particularly by his obtaining the sovereign sway in Poyais, a fertile tract of land on the Mosquito Shore, near the Bay of Honduras, with a capital of the same name. He was originally an officer in the British army, and served with distinction in Spain. In 1816 he was very active in the Venezuelan revolution; and in 1817 he took possession of Amelia Island, on the coast of Florida, then belonging to Spain. In 1819 he attacked Puerto Bello, which he captured, but was soon after surprised in his bed, and obliged to escape out of a window. Some years subsequently he settled among the Poyais, a warlike race of Indians, who had maintained their independence, and having gained their confidence, he was chosen by them their cacique. In this capacity he encouraged commerce, founded schools, &c. In 1824, as cacique of Poyais, he procured a loan in London from respectable houses.' And no doubt both interest and principal were duly paid to these respectable houses—in the currency of Poyais.

It further appears that a book of considerable size, 'chiefly intended for the use of settlers,' was written on the subject of this Poyais colonisation scheme by 'Thomas Strangeways, K.G.C.(!), Captain 1st Native Poyer Regiment, and Aide-de-camp to His Highness Gregor, Cacique of Poyais.' This book, published by Blackwood of Edinburgh in 1822, is entitled a *Sketch of the Mosquito Shore, including the Territory of Poyais*; and it really gives much information with regard to that country, its people, and its products. The suitability of the place as a residence for Europeans, and its capabilities in the way of commerce and agriculture, are dwelt upon by the writer in glowing terms. Nor are his statements without foundation. This Mosquito Territory—in spite of its repellent name—is regarded as one of the healthiest and most productive portions of Central America; and that the founders of Poyais had considered their scheme fully may be seen from Captain Strangeways' reference to 'the opening a communication between the Atlantic and Pacific oceans,' with regard to which he says: 'The practicability of such a measure has never been doubted.' Moreover, although the Highland gentleman with the high-sounding title was doubtless swayed to some extent by vain and ambitious motives, he really had the good of his would-be kingdom at heart. 'The proclamation,' says Strangeways, 'which was addressed to the inhabitants of Poyais by His Highness the Cacique, on leaving that country (dated at Rio Seco the 13th of April 1821), states that His Highness's present visit to Europe is for the purpose of procuring religious and moral instructors, the implements of husbandry, and persons to guide and assist in the cultivation of the soil; and it very particularly mentions that no person but the honest and industrious shall find an asylum in the Territory.' After all, one has no right to assume that the London bankers did not receive payment in full of their advances to the ruler of Poyais; at anyrate, it is quite evident that if he failed to keep his word with them, it was because his

hopeful scheme had failed also. To us, who like to live beneath the flutter of the Union-jack, it seems a matter for regret that this and other attempts at British colonisation in that part of the Isthmus have signally failed.

As notable an attempt as Macgregor's was that of another Scottish adventurer, the famous filibuster Walker, who, thirty years later, tried to civilise Nicaragua proper by force of arms. He, however, aimed at a democratic form of government; and had he acknowledged any superior 'protectorate,' it would have been that of the United States. But all such schemes have quite miscarried; and both of these territories are now under the sway of the native Nicaraguan Republic.

From the consideration of these modern adventures on the Spanish Main, we turn now to matters of a less fanciful order. This worn and tattered guinea-note of 'The Falkirk Union Bank' belongs, since it is dated 1820, to the period of the Poyais settlement; but it does not appeal much to the imagination. One may suppose it to have figured often at the great 'Falkirk Tryst,' as forming part of the purchase-money of a drove of Cheviots or of 'Highland stots,' and as such, to have passed again and again through the horny hands of farmers clinching their bargain over the customary 'gill.' Yet it is not wholly devoid of poetry; for, intertwined along its margin, and again forming a graceful centre-piece in the design, are the rose, the thistle, and the shamrock, with the motto, 'Tria juncta in uno.'

There must be many Americans who still possess specimens of Confederate money, and probably are thus unpleasantly reminded of financial loss. To those, however, who have no such associations, a five-dollar bill, such as the one now under examination, is an interesting relic of the momentous civil war. It is dated 'Richmond, Va., September 2, 1861,' and it promises that 'Six months after the ratification of a treaty of peace between the Confederate States and the United States, the Confederate States of America will pay five dollars' to the bearer of the note. Alas for the hopes of the South! The nearest approach to such a treaty was the surrender at Appomattox Court-house, after which the Confederate States no longer existed. Yet this paper of unfulfilled promises and humbled pride has more of pathos in it than of any meaner feeling. No unprejudiced man can regret the outcome of the great American war; and yet one may be permitted a sigh over 'the lost cause,' if for no other reason than that it *was* a lost cause. Success has always a touch of the cruel in it; and if the Confederates had been victors instead of vanquished, such sympathy as may yet be bestowed upon their memory might not have been forthcoming in the day of their strength. But, as things have turned out, one thinks of the South not as a league of slaveholders and politicians, but rather as a nation of gallant men fighting sternly against ever increasing odds, and dying hard with their faces to the foe. Above all, one remembers their great leader, the most heroic figure in all that struggle, and the skilful and prolonged resistance which he made up to the very last. It could not have been a wholly bad cause that was upheld by such men as Lee and Jackson, who must ever be regarded as examples of the very finest type of nineteenth-

century Americans. So that even this financially worthless memento of the short-lived Confederacy possesses still a certain value of its own, since it awakens the memory of an heroic era.

## THE JULLABAD TRAGEDY.

### CHAPTER IV.—THE SAD SEA.

I WALKED out of the room amid profound silence. As I went through the door, I half turned, and saw the colonel wiping the wine from his face with his pocket-handkerchief. I knew at once the consequence of my insane act. The occasion, likewise, was the worst possible one upon which it could have happened. An outrage like that, committed in the face of the station, could not be condoned or mitigated. My career was at an end.

I was on my way to my quarters, when an idea, fitting enough to the frame of mind in which I then was, took possession of me: could it be the case that Mrs Humby was hiding in the jungle? It was possible enough, and quite certain that, if so, she would never live to see the sun rise. I looked quickly back, expecting to see the adjutant following to place me under arrest. I saw no one; and without an instant's further thought, proceeded to devote my last few hours of personal liberty to the forlorn hope of discovering Mrs Humby. Instead of going on to my quarters, therefore, I made by the shortest way to the skirts of the jungle. I have always felt a sensation of awe in looking on an Indian jungle at night, so many agencies of death are silently moving about in its shadows! It may be easily realised what effect was wrought upon me by thinking of this poor fugitive crouching in some thicket there, trembling at every movement of leaf or bramble as the signal of an awful fate. It drove me almost mad; and forgetful of that fear of an Indian jungle which had always been to me a peculiar terror, I plunged into the darkness and began to call aloud her name.

Many a beast of prey I scared from its ambush; the unwonted disturbance of the silence at intervals created a weird hubbub, when I startled a brood of peafowl from their roost, or alarmed a family of monkeys into a state of hideous screaming and chattering excitement. My flesh was lacerated with thorns and brambles, my dress torn to rags, and my voice in time grew faint with vain calling out of her name. At last I dropped to the ground from exhaustion, and the interval brought me time to think. This wild enterprise was worse than useless. If she had fled to the jungle last night, she was dead, or lost, before now. Such searching as this was vain; and with the foolish wish—springing from my impotency to save her on the one hand, and the impending anxieties of my own circumstances on the other—that I were myself dead along with her, came the sudden revelation that I might not in reality be far from a similar fate.

I had been several hours in the jungle, and I could discern through the trees the approach of day. Morbid as my feelings were, a cold sensation crept over me when I began to realise my situation. Where was I? There is no place in the world where one can be so easily lost as in a track-

less eastern jungle. I recalled to mind a certain morning, more than a year before, when I had been through the jungle shooting wildfowl, and discovered, about nine o'clock, when I thought of getting back to breakfast, that I did not know which way to go. At first, I was amused by the adventure; but when, after hours of fruitless effort to discover a landmark which might guide me, I was forced to sit down—as I did now—and consider my situation, my sensations took an entirely different character. I had nothing with me to eat or drink, and I remembered how forcibly the nature of my dilemma was brought home to me by the nervous crouching of my poor dogs at my feet. Every yard I moved they crept close at my heels, as though fearful of losing me. When I climbed a tree from time to time, to try and discover over the dark sea of jungle some guiding landmark, the poor animals watched me from below, uttering low plaintive whines. When, at other times, I halted in my weary tramp, at a loss which way to turn, the anxious, inquiring look of their upturned eyes I shall never forget. It was seven o'clock in the evening before I got out of the jungle, and I need hardly add that my escape was due entirely to chance. I had to keep my bed for three days afterwards.

I had been much longer in the jungle this night, and consequently must be now much further lost than had previously been the case. I had, however, one circumstance in my favour on this occasion, such as it was—the dawning day suggested my geographical bearings, and I knew of course that the jungle lay to the south-east of the station. On the first occasion, the sky was cloudy, and the sun wholly undiscernible through the tangled branches overhead; so I had now one point in my favour, but two against me. I was worn out with fatigue and excitement, and I had no means of discovering from what direction I had come, or what distance.

I will not dwell further on this part of my narrative. It was noon when I got back to the station—a sight I was to create astonishment!—and I had not really penetrated more than a mile into the jungle all the night. I suppose I had been going in a circle the whole time, as lost men are said to do.

I threw off my tattered mess uniform, and replacing it with a suit of *khaki*, I flung myself on my bed. I was weary and thirsty. My bed offered me rest; my servant brought me drink; but neither availed me. I lay for more than an hour, completely broken down and wretched, before any one came near me. Of course I was expecting a visit from the adjutant—who, my servant told me (and as, indeed, I had only expected), had been there already early in the morning—and the clanking of a sword in the veranda outside soon announced his arrival. He halted in the middle of the room, and regarded me a moment with interest, without speaking. I pointed to my sword, lying on a chair in a corner, and said: 'There it is, Clinton; I know that I have finished with it now.'

But instead of going through the form of placing me under arrest, the adjutant came over and sat on the side of my bed. 'I say, Charlie,' he observed, 'you have been making rather a mess of it. Where have you been all night?'

'Never mind, Clinton; it isn't of the least

consequence—I suppose I am to regard myself as a prisoner?'

'Well, no; it isn't so bad as that, old fellow. It's bad enough, though. What possessed you last night to go on like that? And you don't drink. However, it was fearfully unlucky all those men were there. Were it not for that, I believe—between you and me—the colonel would let it pass.'

'What!' I cried in astonishment. 'An act like that—at the mess-table?'

'Even so, Charlie. He was wrong himself, and he didn't take into account your— Well, we all know how deeply interested you were about poor Mrs Humby. But happening the way it did, you know, he can't pass it over.'

'Yet you don't place me under arrest, Clinton?'

'No, not that. But—we are every man of us heartily sorry, you may be sure—you will have to send in your papers. I know the colonel will have some trouble in arranging it for you, but he will do it. You will have to act at once.'

This was my sentence. It was milder than I had expected, but was practically the same thing. Instead of being cashiered by the sentence of a court-martial, I was allowed to cashier myself. Yet in the service there is a difference between the two things; and I could not but acknowledge the colonel's undeserved leniency. I knew well enough that it would cost him something to carry this matter in my favour against the force of official martinetts of the staff, several of whom were present when I flung the wine in his face and used to him that language.

'It is very good of the colonel, Clinton,' I said, after thinking it over. 'I have not deserved his leniency. I know I behaved outrageously; but I could not have helped it.—Convey my thanks to him, will you?—And now,' I added, turning out, 'I may as well do what is necessary. It comes to the same thing for me, Clinton, in the end, doesn't it?'

'Nonsense, Charlie; you know it doesn't.'

I shook my head, for I knew that it did. I had a lively grasp of my situation now. Clinton instructed me what to do; and sitting down at my writing-table, I went through that form known in the service as 'sending in your papers,' that is, requesting permission to resign your commission. Along with this, I sent in an application for leave to return to England pending retirement from the service. As I signed these papers and handed them to the adjutant, my career as a soldier was practically terminated. It was necessary that I should leave the regiment at the earliest possible moment; and to facilitate this the telegraph would, as a matter of course, be called into service. Accordingly, I might now set about the work of packing up my traps for England.

It is depressing enough to a young man to be suddenly deprived of a career which he has learned to love; but this was the least of my troubles at the moment. I doubted whether I had money enough to pay my expenses to England; yet this did not much concern me. I was oppressed by other and heavier anxieties.

'Clinton,' I asked, as I gave him the papers, 'has anything been heard of Mrs Humby today?'

'Not a word,' was the answer. 'All that was

possible has been done to discover a trace of her, but in vain.'

'Does the policeman know nothing—the man who was on duty at her door?'

'Oh, the fellow was asleep. It was then that she disappeared. People begin to adopt Lady O'Reilly's conviction on the matter as the most probable solution of her disappearance—indeed, the only one.'

'What does Lady O'Reilly say?' I asked eagerly.

'That the poor thing's brain became affected by the terrible anxiety of her situation, and that she wandered into the jungle. It certainly is awful to think of, Everest. Yet what else could have become of her?'

What else! In that Indian station, knowing circumstances as they did, this was the only conclusion that was open to them! She had wandered into the jungle—her diseased brain lured by the promise of safety which its shadow held out to her terrors—and there met her fate. Some day, a native, tending the village cattle among its obscure paths, would find and carry to the bazaar a fragment of her dress. That would be all.

I will not dwell longer upon this dark ending to the tragedy. I dwelt upon it those days until I had sunk into a morbid gloom from which nothing could rouse me. I made my preparations for departure, and remained in the precincts of my own quarters—having my meals brought to me from the mess—until the last day of my sojourn in Jullabad. I made my round of farewell calls with a heavy heart, and was disappointed to the verge of grief by discovering, when I came to say good-bye to her, that Lady O'Reilly had left Jullabad. She was gone to Europe, a week or more. The kind word and kind look of that truest and loveliest of women, which I had hoped to take away with me as my only comfort from this dark empire, I was obliged to go without.

It was not until I had got on board the mail-steamer at Bombay and we began to recede from the dark shores, that I was able to turn my mind to the future. With the last sight of the inland hills, I went below and lay down to think. I opened the book of the future, and tried to face the task. It was a hard one. A delicate mother and sister depended mainly on my help for their support; and now my profession—to prepare me for which my mother had practised hard economies which she and Agnes could ill afford—was gone for life. I must seek something else. I must take measure of my qualifications, and push into the struggling crowd of seekers with all my strength; but alas, I might have to wait long and bear many disappointments, and what should *they* do in the meantime?

For the first three days I was too ill to come on deck, and lay in the stifling solitude of my cabin, except for an hour or so in the middle of the cool night. On the evening of the third day I felt better, and went up about ten o'clock. I had no idea up to this time how many passengers were on board, and I saw only some dozen or so lounging about the deck now. There was no moon; but the stars lit up the ocean with a faint shimmer, which was pleasant and restful after the glare of the day. I hung over the side

of the vessel, observing the phosphorescent roll of the water, and passively enjoying the quiet coolness, troubled with no thoughts of this life, as is always the case when one is caught by the influence of nature on sea or shore, when one of the last things I would have dreamed of on that calm luminous Indian Ocean happened to me. A hand lightly touched my arm, and turning round, I beheld Lady O'Reilly!

'I thought it was you, Mr Everest,' she said. 'Have you been ill?'

'Only seasick.—But I thought you were almost in England by this time, Lady O'Reilly. I needn't say I am glad to meet you on this steamer, for it was a keen disappointment to me when I went to say good-bye and was told that you were gone.'

She put her hand on my arm, and I walked along the deck with her. I longed with a morbid craving to talk about Mrs Humby's fate; but Lady O'Reilly avoided the subject; and after two or three attempts, I recollected myself, and returned to it no more. Was it a topic fitting to ask her to dwell upon? And the painful shock to her generous womanly faith which Mrs Humby's flight must have caused was in itself reason enough why I should avoid bringing the hapless woman's fate into our conversation. But suffering is selfish; it was an effort to me to think or talk of anything else.

So Mrs Humby was left in the past. I had no interest in the present, and the future was too dark to dwell upon. Cheerful words Lady O'Reilly did address to me with all the warm sympathetic kindness of her heart; but they awoke no response in me. I soon began even to feel ill and faint, and stammered a confused apology.

'You are ill, Mr Everest. You must lie down, and send for the doctor.' As she spoke, I dropped on a seat, and after looking at me a few seconds, Lady O'Reilly placed her cool hand on my forehead. 'My poor boy,' she said, 'you have fever. Go to your cabin at once; I will send the doctor to you.'

Staggering somehow down the companion-way, I succeeded in reaching my cabin, and flung myself on my bed. The gradual operation of causes long working had come to a sudden climax, and I felt prostrated like one having the heavy hand of death upon him. This was the night of the third day out from Bombay; and it was not until we had passed Gibraltar, and were steaming along in sight of the sunny Portuguese coast, that the consciousness of life again returned to me. The awakening was very gradual. I think I must have been forty-eight hours emerging slowly from the shadow of delirium. The first conscious impression was that of very low, sweet humming behind the curtain which shaded the head of my berth. I felt no interest save that of tranquil pleasure; nor was I surprised when I discovered my companion to be an ayah, as, after a while, she rose, and drawing the white *chaddar* over her head, gave me some medicine. The woman was evidently not aware that the delirium had passed away, and her small dusky hand was very light and cool when from time to time she laid it gently on my forehead.

All the night she remained with me. Sometimes I slept, but as often as I awoke, my

watchful nurse was ready to minister to my wants. She was a young woman—an attendant upon some lady passenger—and so silent and gentle and attentive, that no white-faced Sister of Mercy could awaken a more grateful glow of homage in a patient's bosom than that which I felt warming mine towards this Indian nurse. She deserved it; if her skin was dark, her spirit was that of a ministering angel of light.

In the morning, the doctor came, addressed a few questions to the ayah, and appeared much satisfied with his examination of my condition. An hour or so later, Lady O'Reilly came. I was sensible of lack of strength to speak, and therefore made no sign for the present of being so much better; but Lady O'Reilly whispered in Hindustani with the woman for a few minutes, and then sent her away.

Will it be credited that this noblest of women took her ayah's place as my nurse, and had, as I inferred, been doing so all along? I could hardly credit it myself. But as hours passed, and she sat by my berth reading or sewing, rising at frequent intervals to attend to my wants, I realised it with an access of emotion which overpowered me at last. Her surprise was great when, on withdrawing her hand from my brow, I interrupted the action and gratefully pressed it to my lips. I could not speak; I struggled to do so; and then she placed her fingers again to my lips and with a bright smile forbade me. 'Not a word now—not a word!' she gently admonished. 'You must be a man again, when you see your mother. I am responsible for you, and my orders must be obeyed!'

She withdrew behind the curtain to the ayah's seat, and I closed my eyes and slept for several hours. When I awoke, the ayah was there again—I heard them whispering—but it was Lady O'Reilly who came to me. I felt so strengthened now, that I insisted on pouring my thanks at her feet.

'I don't really deserve one-fourth of your thanks,' was her answer. 'You must give them to ayah, not to me.'

I had not forgotten the ayah. But I thought it strange that when I wanted to thank her too, she shrank still farther back from my sight behind the curtain.

'At least, ayah,' I said, addressing my invisible nurse, 'when we reach England, I will give you a mark of my gratitude to carry back with you.'

'Ayah would be proud of some Regent Street bangles,' observed Lady O'Reilly with a smile.

'She shall have the handsomest I can get!' I answered.

'Very well. Ayah will remember your promise, Mr Everest.—And now,' she added, 'I have some home-news for you; but until the doctor authorises me, I cannot let you have it.'

Home-news? The announcement struck me rather sadly. I had written to my poor dear mother the mail before I left India, breaking the news of my misfortune to her as gently as I could. Knowing what it meant to her and my sister, how could I look for comfort in a message from them? Forgiveness I should have, and abundant love; but ah, so much the harder would the message be to bear!

'The letters met us at Malta,' Lady O'Reilly explained.—'Now I will bring the doctor to see

you; and if he gives permission, you shall have them.—Your mother, I may say, will meet us at Gravesend; and I am going to stay a week or two with you myself—until I leave you quite well.' So saying, she left the cabin.

All this was very mystifying to me, and I could only shut my eyes, and try not to think at all until she came back with the doctor.

Lady O'Reilly was some time longer than I expected. While waiting for her return, full of impatience to obtain that home-news which had been announced to me with such puzzling explanations, I was struck with a sense of ungraciousness towards my silent nurse. 'Ayah,' I said, 'come here.'

She appeared to hesitate, but presently rose. Her face was not a matter of interest to me, and if it had been, it was impossible to see it; her back, as she stood before me, was to the light, and the *chaddar* hung low over her forehead. She 'salaamed' to me with that graceful movement of hand and body peculiar to Indian women, and stood, with her hands folded on her bosom, silently waiting my pleasure.

'Ayah,' I said in Hindustani, 'I am very grateful to you for your services. Only for you and Mem-Sahib, I should have died. My mother will thank you for me when she sees you.'

The ayah bent her slight figure, and again placed her open hand to her forehead in acknowledgment of my words. Then she drew back, to resume her place behind the curtain; but before she did so, I could not resist—nor, indeed, did I try to resist—the impulse to catch her small dark hand in mine and put it to my lips. She took it away with a startled flutter, and quickly retreated to her place. Then the doctor came; and I got my letters, which brought news indeed of a kind fitted for a convalescent to read.

## PHYSIOLOGICAL METAPHORS.

LANGUAGE from one point of view may be regarded as fossilised thought. Just as in the strata of the rocks are found remnants of extinct genera and species, so, in our every-day language, words and expressions survive still bearing the almost obliterated traces of ancient and half-forgotten theories. Each record is silent to the untrained eye, but eloquent with meaning to those who have learned to read it aright. In our most logical moods we still employ expressions which imply belief in long-exploded hypotheses. In our calmest moments we use metaphors and similes once instinct with passion, but now part and parcel of the common coin of current thought. We speak of an army being smitten by 'disastrous panic' without reflecting that our epithet implies belief in astrology, or that our substantive indicates faith in the existence of the god Pan. We describe a man as 'jovial' or 'mercurial' in disposition without any conscious reference either to Jupiter or Mercury.

But perhaps the most remarkable series of latent metaphors in our language are those of the physiological type which contain references to the organs and functions of the human body. Few words are more frequently on our lips than 'warm-hearted,' 'cool-headed,' 'good-humoured,' 'ill-tempered.' We talk of 'venting the spleen,' 'a man of that kidney,' 'a keen eye for business,'

'a good ear for music,' 'a silver-tongued' orator, 'a victim of hypochondriasis.' All these expressions, however loosely employed in general, involve a theory, and in most cases the theory is either false or partially inaccurate. This is not surprising when we reflect that such metaphors date from the infancy of human knowledge, when the body and its functions were still sealed mysteries.

First in frequency and importance must be placed that vast range of expressions which refer to the heart as the seat of the soul, and especially of the emotional soul. These expressions are found in the earliest known writings, and have become the commonplaces of almost every nation. We talk of the devices and desires of the heart. The heart of kings is said to be unsearchable. Here the heart stands for the whole nature, 'writ short,' but with reference rather to the natural disposition and the moral character than to the intellectual powers. More frequently, however, the heart stands for the affections and the emotions. The poet Ford calls the heart in express terms 'the seat of our affection.' Shakspeare speaks of the heart 'dancing' for joy, and the expression has become a familiar one. Tennyson, in well-remembered lines, tells us that

Kind hearts are more than coronets,  
And simple faith than Norman blood.

Especially do we speak of the heart when we are thinking of the devotion of a lifetime. The bride at the altar is said to give her 'hand and heart'—the former signifying her person and fortune, and the latter implying the surrender of her affections.

The following lines express a familiar but always touching sentiment:

The flush of youth soon passes from the face,  
The spells of fancy from the mind depart;  
The form may lose its symmetry, its grace,  
But time can claim no victory o'er the heart.

It is needless to multiply instances of such expressions, as our literature teems with them, and they are constantly upon our lips.

One almost hesitates to profane such sacred expressions with the hint that they are one and all false to nature; yet such is the hard fact. The heart is not the source or seat of the emotions; it is, on the contrary, one of the most prosaic, although most vital, organs of the body. It is simply a hollowed-out muscle, which expands to receive the blood from the veins, and contracts to propel it again through the arteries. It is merely a natural pump, very wonderful and perfect in its structure and mechanism, but still concerned in no higher function than the purely mechanical one of regulating the supply of blood to the various organs of the body. The heart does not feel emotion. It does not warm with love or burn with hate or melt with pity, as the poets have so long assured us, and as so many familiar and popular expressions imply. All these emotions have their seat in the brain.

Yet it is not very difficult to discern why so many nations have instinctively spoken of the heart as the seat of the emotions, not merely without a consciousness of absurdity, but with a firm conviction of the accuracy of such expres-

sions. Though not the source and origin of emotion, the heart is pre-eminently responsive to its influence. It is linked by many subtle cords to the brain; and when the emotional centre there is affected, the heart is the first organ to feel the electric thrill, and throbs and palpitates in ready and responsive sympathy. In this secondary sense the heart may still be regarded as concerned in emotion. It is so concerned, but as patient, not agent; as effect, and not cause. If any one will carefully analyse his sensations when struck with a sudden and overpowering emotion, he will find that the head was first affected, however momentarily, and that the effect upon the heart was subsequent and secondary. Sudden emotion produces a feeling of fullness in the head, slight giddiness, and a transient bewilderment of the intellect—all signs which clearly indicate some disturbance of the brain. The quickened heart-beat and the throbbing pulse are secondary effects, although they may follow after an interval so brief as to be scarcely appreciable.

The suddenness of the emotion is an important element in determining its effect upon the heart. There are some emotions which, although profound, are, from their nature, gradual in their onset, and these leave the heart almost unaffected. Pity may be so deep as to draw forth abundant tears, but it does not cause the throbings and pulsations of an excited heart. The sentiment of awe and reverence may be very profound, as when one gazes upon 'the long-drawn aisle' or 'fretted vault' of some ancient cathedral, or upon the birthplace or grave of some illustrious patriot or poet; or the sense of beauty and grandeur with which one views the Peak of Teneriffe or the rushing waters of Niagara may be so deep as to thrill our inmost nature; but in both these cases the pulse remains quiet. Often when we are under the influence of such emotions, the breathing is more affected than the circulation. We involuntarily hold our breath, and our respirations become soft and shallow. In such cases, it would be as logical to regard the lungs as the seat of the emotions as, in other instances, to ascribe their origin to the heart.

Love powerfully influences the heart's action, as every poet has remarked and sung. The subtle chain of association which makes the heart throb at the distant glance of an eye, the flutter of a dress, the sight of an envelope, the odour of a withered flower, the touch of a tress of hair, were it not so familiar, would justly be regarded as one of the most wonderful facts of our nature. Coleridge says, 'A spring of love gushed from my heart'—an adequate but not an exaggerated figure; and all poetry abounds in similar images.

The opposite emotion, hatred, is also one that exerts a marked influence over the heart. Sudden terror affects the heart most of all, often causing fainting, and, in very rare cases, sudden death. 'Death from fright' is fortunately an event of extreme infrequency, but there is no reason to doubt its possibility. In all these cases, however, it must still be borne in mind that the heart is secondarily affected by the emotion, and is never the source or origin of it. It is like the index on the engine which shows the pressure of the steam. The source of the steam is the water, and the fire

beneath; and the source of emotion lies hidden in the mysterious recesses of the brain.

Many curious expressions are thickly strewn through language and literature referring to the relations of the heart and the emotions. Every one knows the exultant feeling to which Wordsworth refers when he says:

My heart leaps up when I behold  
A rainbow in the sky.

Another poet addresses his heart, and asks it to inform him why he is so mournful; by which he probably implies that his heart was the source of his sorrow, and therefore responsible for it. Every one knows the oppression conveyed by the words, 'My heart sank within me,' 'My heart died within me.'

The most piteous expression of all is that of the 'broken' heart. The heart is said to be broken when the emotional nature has received a shock from which it seems incapable of rallying, when the feelings are so numbed with sorrow and suffering as to be incapable of responding to any ordinary stimulus. Many, no doubt, use the words in a more literal sense, and employ them to indicate some fancied injury to the structure and substance of the heart produced by sudden loss or overwhelming emotion. It is well to know that such an idea is a pure delusion. The heart does break sometimes, or rather burst (*rupture* is the medical term); but it is a rare accident, and always the result of advanced disease. The sequel is invariably instantaneous death. Death does occur sometimes, although very rarely, from profound emotion; but it is due not to breaking of the heart, but to paralysis of its action. Those persons, therefore, who seek sympathy on the ground of a broken heart are, strictly speaking, impostors, however deserving of our pity on other grounds. Their feelings may have been so cruelly lacerated that they will never succeed in entirely recovering their former elasticity and freshness; but their hearts are physically as sound as ever, and death will not come, however often invited. Grief very seldom kills; but it may induce a neglect of health and a repugnance to the duties of life which may gradually undermine the constitution, and thus lead to a premature decease.

The conventional use of metaphors which allude to the heart as the seat of emotion naturally exercises an almost unconscious influence upon thought and action. Queen Mary Tudor died protesting that the word Calais would be found written upon her heart. The idea that the name of the lost and bitterly lamented town would be literally imprinted upon her body was a mere disordered fantasy; but the particular site selected for the impress was no doubt suggested by some of the physiological metaphors which we are discussing. Actors put their hands upon their hearts when they wish to indicate visibly an excess of emotion. This gesture is now thoroughly stereotyped; but it is probably a false one, due to the same influence of inaccurate metaphors. In real life, people, when powerfully excited, do not put their hands to their hearts. Pressing the hand to the forehead, or bending the head slightly forward, is a more usual and more natural gesture, and correctly indicates the true seat of the emotions.

No other organ furnishes us with the same

profusion of metaphor as the heart. The expressions referring to the head are less numerous and much more accurate, since, from a very early period, the brain has been regarded as the seat of the intellectual nature. 'Cool-headed' and 'hard-headed' do not imply any erroneous theory. 'Thick-headed' probably indicates a belief that thickness of skull is inconsistent with mental capacity—a view that has considerable foundation.

The liver contributes materially to our stock of physiological metaphors. We often use the word 'melancholy,' which means literally 'black bile,' and still points out how a disordered liver was regarded as the source of despondency and mental depression. This idea, although, strictly speaking, inaccurate, as the liver is not the seat of the emotions, and can only influence them secondarily through the brain, possesses more foundation than many similar expressions. There is truth as well as wit in the reply given to the question, 'Is life worth living?'—'All depends on the liver.' The 'jaundiced eye' is another metaphor from the same organ. It probably contains a reference to the rather erroneous idea that persons suffering from jaundice see everything coloured yellow—an occasional but quite rare phenomenon. 'Hypochondriasis,' which means literally 'below the ribs,' also probably contains an allusion to the liver.

The spleen figures largely in metaphor. 'Splenetic' was a favourite epithet of some of the older writers, and 'to vent the spleen' is a phrase still occasionally heard. It is an unlucky expression, because the spleen does not manufacture any secretion, and has therefore nothing to vent; and secondly, it has not the remotest relation to the emotions.

The kidneys are frequently mentioned in the Book of Psalms under the title of the 'reins,' and are invested with various moral and intellectual functions. They survive in modern English metaphor in the single expression, 'a man of that kidney,' a phrase both false and objectionable.

Many of the organs of the body are employed in metaphor in a way that is partly accurate and partly inaccurate. We talk of 'a keen eye for business;' but we know that it is not the eye of the business man that we have most in view, but rather his general intelligence. The 'quick ear' for music which some fortunate persons possess would be of little value if it did not really imply the correlative faculty of musical taste and appreciation, which belong to the brain. The 'silver tongue' of the orator could not be dispensed with; yet the tongue is quite a subordinate organ of speech, and is much more closely concerned with the sense of taste, a faculty which we rather perversely ascribe to the palate alone. We 'tickle our palates' with a dainty dish; but 'tickle our tongues' would be much more correct physiology.

We do not imagine that any conviction, however clear, of the inaccuracy of most of our physiological metaphors would be likely to dislodge them from the secure position which they have so long held in current speech. Metaphorical language is natural to man, and strict accuracy is not likely to be regarded, if force and fervour can be attained. As an American author remarks, it is not truth

we want, but *thrill*. The jolly tar who 'shivers his timbers' would not think the expression less forcible if its literal accuracy were questioned. These expressions are firmly rooted in the language, and it would be mere purism to advocate their entire suppression; but their history is of great interest; and a clear recognition of their general inaccuracy may lead to greater moderation in their use, and perhaps to the discarding of some physiological metaphors which are not merely inaccurate, but coarse and objectionable.

## A TERRIBLE TEN MINUTES.

### A STORY OF THE MIDNIGHT MAIL.

It happened one afternoon last year, during the month of November, that I received a telegram calling for my presence in London early the next morning on an important business matter. To such a summons there was but one answer possible, so, with just a regretful thought for a card-party I should have to forego, I wired back this reply: 'Mr J. DEVON, Anderton's Hotel, London.—Shall leave Burton by the 12 to-night, and will call on you to-morrow at 8.15.—KNIGHTLY.' Having despatched my message, I finished off the day's work with all speed, and then returned to my lodgings to make preparations for my journey. These, as the masculine reader needs not to be told, consisted principally of cramming a soft cap and a spirit-flask, together with a few other necessities, into a carpet bag; after which followed the discussion of a substantial meal, and the delivery of an exhortation to my landlady to feed my fox-terrier Grip at his usual hours.

The remainder of the evening was spent in skimming over the morning's paper, wherein I found little to interest me. In disgust, I flung the thing on the floor. It alighted at a graceful angle, on whose apex appeared the heading, conspicuous as leaded type could make it—'Shocking Wife Murder in Burton.—Arrest of the Murderer.' With a mental apology to the publishers of the *Chronicle* for the injustice I had done them as caterers to the public craving for horrors, I picked up the paper and proceeded to digest the 'harrowing details.' The gist of the news was as follows: An abandoned ruffian, Chippy Watson by name, had, after the fashion of his class, beaten in his wife's skull with a mallet, in consequence of some domestic disagreement. Having committed the deed, he coolly put on his coat and hat, and was proceeding to depart, when the neighbours and police, attracted by the screams of the unfortunate victim, rushed in and secured him.—This was all, or nearly all the paragraph contained, except for the usual information that 'the prisoner will be brought up before the magistrates this morning, and charged with causing the wilful murder of his wife.'

It was now past eleven—time for me to make my way down to the station; rather more than time, in fact, since that imposing structure was distant from my lodgings by fully two miles. Fortunately, my bag was light, and I shared in its pleasing characteristic of being unburdened by superfluous weight. None the less, on reaching my destination there was only one minute left me wherein to take my ticket and secure a seat. The

latter operation, thanks to the slowness of the booking-clerk in handing me my change, had to be accomplished by running the gantlet of guards and porters as the train began to move.

No sooner had I ascertained that my limbs were uninjured by the unceremonious fashion in which the railway officials had 'assisted' me to my seat, than I discovered that the only other tenant of the compartment in which I was ensconced was a young lady, and one, moreover, of no small beauty. Now, I am a shy man as far as the fair sex is concerned. Among men, I have self-possession enough and to spare; but in the presence of ladies, that self-possession vanishes with most uncalled-for rapidity. In the presence of ladies, yes; but here there was but one, who was bound to keep me company for a whole hour until the train should make its first stop. So it happened that, as I contemplated the charms of my vis-à-vis from behind the evening paper, which I had found time to buy on my flight to the station, a measure of my courage returned, and in the inspiring words of Mr Gilbert, said I to myself: 'I'll take heart and make a start; faint heart never won fair lady.'

'I trust you were not alarmed by my unceremonious entry?' I remarked, with some inward misgivings, but much outward assurance.

For answer, a quiet stare and a slight contraction of the pretty mouth of my companion—indicating her opinion that, as a stranger and unacquainted, I had no right to speak to her.

This to an ordinary male animal was the moment for strategic attack upon the fair one's scruples; for me it was the exact opposite—the moment for flight, had flight been possible. Ostrich-like, I buried my face behind my newspaper—there being no sand available—and in a few moments heard, to my relief, a corresponding rustle from the opposite side of the carriage as my pretty prude followed suit. The sense of defeat and disgrace fairly overwhelmed me for a while, and my eyes wandered over the paper I held in my hand, seeing but understanding not what they saw. At length they lighted upon a familiar name, 'Chippy Watson,' and their owner recovered his senses and almost forgot his grief as he read the following lines: 'The Burton Murder—Escape of the Prisoner.' After detailing the incidents of the hearing before the magistrates and the remand of the prisoner, pending the inquest, the paragraph went on as follows: 'On leaving the court, Watson was conducted between four officers to the van. Just as he was stepping in, and when the policemen were endeavouring to keep back the crowd that pressed round, the prisoner suddenly snapped his handcuffs, in some inexplicable manner, and knocking down the constables who threw themselves upon him, broke through the bystanders and fled down the street. The whole affair took place as it seemed in a second. One minute, and Watson, rigorously guarded, was quietly walking into the van in the midst of the officers; the next, and he was free, tearing down the street with the police and the populace at his heels. He was seen to dodge down a back alley, known as Shut Lane, and followed by the crowd of several hundreds. At the end of Shut Lane he disappeared round a corner, and, strange to say, has not been seen again. There can be no doubt that he will be

recaptured; but his present escape and disappearance are most mysterious. We understand that the fellow possesses singular strength and agility; but none the less, it will be a standing disgrace to our police authorities that a prisoner should thus, in broad daylight and in the midst of a crowded thoroughfare, effect his escape from the very hands of justice. A reward of one hundred pounds has been offered for his re-apprehension. Watson is about five feet nine inches in height, strongly built, and when he escaped was dressed in a gray fustian suit, with a red scarf and soft hat. He may further be distinguished by a scar across his chin, and by having an arrow tattooed on the back of his left hand.'

This was about the extent of the information contained in the paragraph, and my readers will agree with me that the news was sufficiently exciting to occupy my thoughts to the complete exclusion of the unpleasant experience I had just passed through. As I lay back in my seat to muse upon what I had read, my thoughts began after a while to wander and my head to nod, according to their wont at midnight, and before long I fell asleep. How long I slept I cannot tell—probably for a few minutes only—but in those few minutes I underwent a most discomforting dream. I dreamt that Chippy Watson stood over me, mallet in hand, and that my travelling companion was holding his arm, to avert the threatened blow. She struggled in vain, and the mallet fell—yet with a strangely light touch—upon my arm. With a start, I awoke, and then saw the girl of my dream bending towards me with a scrap of paper in her hand. But her face, how terribly was it changed! Instead of the dainty pink flush I had last seen, there was a ghastly whiteness in her cheeks, and her eyes seemed starting from her head with terror. Holding up one finger, as if to command silence, she passed me the paper, on which were written the following words: 'Some one is underneath the seat, and has just touched me.'

Was it the dream which filled me with the thought that this was no idle alarm? I cannot tell; but this much I know, that in an instant there flashed across my mind with overwhelming force the thought of the escaped wife-murderer.

Returning my companion's silence-signal by a gesture of acquiescence, I wrote upon the paper: 'It is probably only a dog. Shall I look under the seat?'

Her answer was short and to the point: 'No; do not look. It was a hand.'

Here, then, was a sufficient dilemma; but by comparison with what had passed before between my fellow-passenger and myself, it was a dilemma that I felt almost disposed to welcome. The male sex in my person was about to assume its rightful position of protector to its weaker, if would-be independent companion. Sweet was my revenge; and yet, the revenge scarcely promised to be wholly pleasurable.

My first action was to remove any suspicion that there might be in the mind of the mysterious third occupant of our carriage, through the presumably accidental action of having touched the lady's dress. Giving vent to an audible yawn, as though I had just awakened from sleep, I remarked, in a tone of cool imperti-

nence: 'You really must excuse me for addressing you again, madam; but will you permit me to smoke, to enliven this tedious journey?' As I spoke, I accompanied my words by a meaning glance, and was favoured with the reply: 'Certainly, if you wish it; I cannot prevent you.'

Thereupon, I produced my pipe and tobacco-pouch and proceeded slowly to fill the former, as I thought out the plan of action. On reference to my watch, I saw that the train would stop in another ten minutes. Clearly, the only thing to do was to wait till we reached Blackley, and there get assistance to find out who our unknown travelling companion might be.

The longer I pondered over the problem, the more curious for its solution did I become, and then, heedless of the warning I had received, I struck a match and intentionally dropped it. Stooping down with a muttered malediction to pick it up, I cast a searching glance underneath the opposite seat, and then my blood ran cold, as the faint gleam of the taper revealed the back of a man's hand with the mark of a tattooed arrow upon it. Chippy Watson, then, was our companion—a doomed and desperate man!

By a mighty effort, I controlled my voice sufficiently to say: 'Excuse me reaching across you, madam, but that was my last match, and I could not afford to let it go out.'

The girl, into whose white cheeks the colour showed no trace of returning, murmured some unintelligible reply, and for a few moments we sat in silence. Again I looked at my watch. Thank heaven! in five minutes we should be at Blackley, and the awful ride would be at an end. Scarcely had the thought formulated itself, when the girl opposite me sprang up, trembling like a leaf, and shrieked, ere I could stop her: 'Oh, the hand has touched my foot again.'

The moment the words left her lips, I heard a sudden movement under the seat, and quicker than thought, a figure appeared upon the floor. In that moment I lunged myself upon the ruffian and clutched his throat with the energy of despair, knowing that should he once gain his feet, it was all over with me, the lighter and weaker man. Can I ever forget the horror of that five minutes' ride? The whole compartment seemed to be falling upon me. Teeth, nails, feet, all were attacking me at once; but through all I kept my grip upon the murderer's throat, and though I streamed with blood, and almost lost consciousness, still held on, while the girl's screams rang dimly through my ears. Suddenly the train stopped; the struggle ceased; and I fainted across the body of my captive.

When I recovered consciousness at length, I found myself lying upon a table in the Blackley Station waiting-room, with a sympathetic crowd around me, and, best of all, I saw a face bending tenderly over me, the face of the girl of my dream and my discomfiture. After making two or three efforts, I managed to ask: 'Where is Watson?'

'Very high dead,' replied a ruddy-faced farmer who stood beside me. 'You three-quarters strangled the life out of his ugly body; he was black in the face when they lifted you off him.'

'Do you know that he is an escaped wife-murderer?' I inquired feebly.

'Yes, we know,' responded my honest friend.

'The Burtown police telegraphed after the train to have it searched, because a man answering his description had been seen in the station before it left. The police have got him safe, my lad, this time, and no mistake.—Why, I saw him handcuffed and his arms pinioned behind him, and he a-lying half dead the while, after the throttling as you gave him.'

Do my readers want to hear the rest of my story, now that the catastrophe is told? If so, I will inform them that Watson, on breaking loose from the police, after turning the corner of Shut Lane—where it will be remembered he disappeared—contrived, by an almost incredible effort, to scale a high wall, and so gain the shelter of a railway embankment. Along this he crept until he reached the mid-town tunnel, where he had lurked all day, until, late in the evening, he crept into the station, and contrived to secrete himself in a carriage of the midnight mail, with the results before mentioned.

There is one more incident in close connection with that journey to be told; it is this, that there will be a marriage early this spring. The name of the bridegroom will be Knightly; the name of the bride does not matter. She was never formally introduced to her future lord and master, and therefore it is surely unnecessary to tell the name she will soon cease to bear, to a passing acquaintance like the reader.

#### THE JUNGFRAU DISASTER.

THERE is scarcely a lovelier sight in all Switzerland than the Jungfrau—the Maiden Queen of the Oberland—as she is seen from Interlaken framed in the wild grandeur of the Lauterbrunnen valley, with her mantle of snow and her dazzling glacier-slopes, thrown into still greater contrast by the black rocks on either side. It is a sight which fills the traveller with enthusiastic admiration, and enables him to realise fully the wild intoxication of the mountaineer who willingly confronts every danger—even death itself—to gain the glorious summit.

There is always to be found, even among experienced mountaineers, a certain class of men who decry the services of a guide, thinking that the glory is greater if, unaided, they can scale the higher Swiss mountains; and to this class the Swiss tourists who attempted the ascent of the Jungfrau undoubtedly belonged. The terrible sequel to their rashness may perhaps cool the spirit of bravado in others who would have done likewise had they been successful. In the Visitors' Book of the *Hotel Staubbach* at Lauterbrunnen are six names, surrounded with a black line, and in the margin appears the sad epitaph:

'Overwhelmed on the Jungfrau, July 15: recovered, July 21, 1887.' The names are as follows:

DOCTEUR A. WETTSTEIN, de Küsnacht, membre du Club Alpin-suisse. GODEFROI KUHN, de Glarus, membre du Club Alpin-suisse. H. WETTSTEIN; CHARLES ZIEGLER; W. BAER; GUSTAVE BIEDER.

All were hardy men and skilled mountaineers, two of them being members of the Swiss Alpine Club. On Wednesday, July 13, they

arrived at the *Hotel Staubbach*, and passed the night there; but although repeatedly questioned, they persistently refused to reveal their plans. It was evident that they intended to make the ascent of one of the mountains which surround Lauterbrunnen, for they came equipped with Alpenstocks, ice-axes, and ropes for the purpose. As they approached the hotel, the usual crowd of guides had beset them, offering their services; but they had refused all assistance, and had plainly determined to keep even their destination a secret. It was in vain that M. d'Allmen, the proprietor of the hotel—himself a member of the Alpine Club—had pressed them: to all his inquiries, they merely returned evasive replies.

On Thursday, July 14, they left the *Hotel Staubbach* at one o'clock in the afternoon, carrying provisions with them. For some distance they were accompanied by a guide, with whom they had entered into conversation at the hotel; and on his return he informed M. d'Allmen that they had determined to make the ascent of the Jungfrau. M. d'Allmen himself had already arrived at the same conclusion, for he knew that they had telegraphed to the Eggshorn ordering wood and provisions to be brought on Friday evening to the Concordia Hut, which is situated between the Jungfrau glacier and the glacier of Aletsch. Upon the guide's return, there was no longer any doubt that their intention was to attempt the Jungfrau, and afterwards, probably, some still more difficult peak, such as the Finster-Aarhorn or the Viescherhorn.

M. d'Allmen's fears were at once aroused, for to attempt such a dangerous climb without a guide is little short of madness, even for the cleverest mountaineer with iron muscles and the strongest head. Nothing but a life spent on the mountains can give the necessary experience, which consists not only of a knowledge of the different routes, but also of the crevasses, the movements of the glacier, the spots exposed to avalanches at each season of the year, the firmness of the snow bridges, and the different points of shelter in case of a storm.

Leaving Lauterbrunnen on Thursday afternoon, Doctor Wettstein and his party reached the Roththal the same evening; and on Friday morning, July 15, they started again on their way in splendid weather. From the Club Hut on the Roththal to the summit of the Jungfrau the ascent is made along the rocks in six hours. This route, which is by far the best, has only lately been discovered: the first ascent was made by M. Frédéric d'Allmen with six guides in September 1885. The ascent from Grindelwald occupies eleven hours: six to the hut on the Moire above the Little Scheideck, and five from the hut to the summit. The way runs over the Guggi Glacier, the Jungfrau-Firn, and the Roththal-Sattel, and has the disadvantage of crossing several enormous crevasses. The same obstacles are encountered on the route from the Bergli, which is an eight hours' walk from Grindelwald, and six from the Jungfrau. The third route crosses the Eggshorn, reaches the Concordia Hut in six hours, and the summit is gained across the glacier in seven hours more. To ascend by these three routes, it is necessary to scale the Roththal-Sattel, a peak twelve thousand feet high.

Starting from the Rothhal on Friday morning, the unfortunate party must have reached the Jungfrau towards midday. About that time, a terrific storm, the most violent of the season, broke over the mountain, and a fierce gale sprang up from the south-east. The uneasiness at Lauterbrunnen increased as the storm continued; and on Saturday morning (July 16), the weather being still rainy, the proprietor of the *Staubach* telegraphed to the Eggshorn to inquire whether the party had been able to reach the Concordia Hut. A reply in the negative augmented his anxiety. The same evening he despatched a second telegram, and received a more detailed reply. The porters had arrived at the hut on Friday evening with the wood and provisions, and had descended again on Saturday afternoon without encountering any one. The next day (Sunday, July 17), although the storm had scarcely abated, seven guides from Lauterbrunnen determined to start in search of the missing party. They passed the night on the Rothhal, after a fatiguing climb of seven hours, and returned in the afternoon of the following day. Despite their repeated and plucky attempts, their search was unsuccessful: the mist and the wind had prevented them from reaching the Jungfrau. A second search-party, consisting, with one exception, of the same men, was organised on Tuesday, July 19. They ascended the Rothhal, and again attempted to reach the Jungfrau. The storm drove them back once more; but, with indomitable pluck, they returned to the Rothhal, whither provisions had been sent for their use. At length, on Thursday, July 21, the weather brightened. They resumed their search; and about nine o'clock in the morning, so clear was the atmosphere that they could be distinguished upon the summit from Lauterbrunnen with the naked eye. A quarter of an hour before, they discovered the debris of a meal beneath a mass of rock in the direction of the Rothhal. It was evident that the ill-fated party had stopped there on the 15th to take some food in a spot sheltered from the storm. On reaching the summit, the guides observed several men upon the Jungfrau-Firn, who made signs to them to wait their arrival. They proved to be three members of a search-party organised by Madame Wettstein, who had despatched two parties, one from Grindelwald, and the other from the Eggshorn, to scour the glaciers in every direction.

From the other side of the mountain, an Englishman, accompanied by two guides, had on his own account attempted the ascent by the Bergli to search for the missing men. He reached the Rothhal-Sattel, and in a short time, at a height of about eleven thousand feet, between the Jungfrau and the Trugberg, he observed upon the great glacier first one Alpenstock upright in the snow, and a few paces beyond, a second. Descending a precipitous slope, he reached the spot, two thousand feet below the top of the Jungfrau, and there, lying side by side, still encircled by the rope, which was broken in several places, he discovered the six bodies. Their faces bore no trace of suffering, though their bones had been broken by their terrible fall. Whether they had been struck by the lightning, or carried off their feet by the wind, or whether—as seems most probable—they had been swept down by

the slipping of a mass of softened snow, it was impossible to determine; all that could be seen was that they must have fallen from a height of nearly one thousand feet. A battered watch found upon one of the bodies had stopped at a quarter to six, proving beyond doubt—as the cold renders it impossible to pass the night on the mountain—that the accident had happened in the afternoon of Friday, July 15.

The news of the discovery was rapidly conveyed by the guides to their comrades already at the summit; and then the whole party left the glacier valley, and descended with all possible speed to Lauterbrunnen, accomplishing the distance with unparalleled rapidity in five hours. On Saturday, July 23, twenty-two guides from Grindelwald and the Eggshorn ascended once more, and placing the bodies on sledges, brought them over the Aletsch glacier to Fieschi. From Fieschi they were transported, one to Berne, and the five others to Zurich; and the whole population of both towns testified to their sorrow at the sad end of their compatriots by following them to the grave.

#### LETTERS.

SUCH a little thing—a letter,

Yet so much it may contain;

Written thoughts and mute expressions,

Full of pleasure, fraught with pain.

When our hearts are sad at parting,

Comes a gleam of comfort bright

In the mutual promise given:

'We will not forget to write.'

Plans and doings of the absent,

Scraps of news we like to hear,

All remind us, e'en though distant,

Kind remembrance keeps us near.

Yet sometimes a single letter

Turns the sunshine into shade;

Chills our efforts, clouds our prospects,

Blights our hopes, and makes them fade.

Messengers of joy or sorrow,

Life or death, success, despair,

Bearers of affection's wishes,

Greeting kind or loving prayer

Prayer or greeting, were we present,

Would be felt but half-unsaid;

We can write, because our letters—

Not our faces—will be read.

Who has not some treasured letters,

Fragments choice of others' lives;

Relics, some, of friends departed,

Friends whose memory still survives?

Touched by neither time nor distance,

Will these words unspoken last;

Voiceless whispers of the present,

Silent echoes of the past!

## PANICS AND FIRES IN THEATRES.

BY AN OLD STAGER.

It is said that at the moment of the destruction of Pompeii by a volcanic eruption in 79 A.D., a dramatic representation was being given in the theatre. Whether the statement is absolutely reliable or not I am not in a position to say; but certain it is that from the earliest days of stage spectacles theatres have been peculiarly subject to the ravages of the fire-king. Nor have these ravages had their origin in external causes, as in the case of the theatre in Pompeii, or in that of the eight theatres burned to the ground during the Chicago conflagration in 1871. As a rule, the destroying element owes its origin to actual or supposed danger from within. The lessening of this danger is now a problem which those in authority must face without flinching. The terrible disaster at Exeter has made further delay impossible, and the community at large will certainly not be content until the minimum of risk attendant on theatre-going has been realised.

Before touching on a few out of the many causes and preventives of playhouse catastrophes, it might be instructive to glance at some of the more notable conflagrations and panics in theatres which have occurred during the present century. One of the earliest was that of Covent Garden Theatre, which was burned to the ground on September 20, 1808. Discovered at four o'clock in the morning, the fire raged furiously for three hours, when the entire interior of the noble structure was destroyed. Nearly all the scenery, wardrobes, and the music and dramatic library—including some of the originals of Handel and Arne—shared the same fate, and, sad to relate, eleven firemen were buried in the ruins. These men had introduced a hose through an adjoining passage, and were directing it towards the galleries, when the burning roof fell in and overwhelmed them. The origin of the fire remained in obscurity, though it was

supposed to have been caused by the wadding of a gun fired during the performance of *Pizarro* on the previous night.

Twenty years afterwards, Covent Garden was the scene of another fatality, the circumstances attending which seem sufficiently uncommon to merit a record. Between one and two o'clock in the afternoon of November 19, 1828, one of the gasometers used for lighting the theatre exploded, and the storekeeper and gas-man were killed on the spot. It appeared that the cellars, in which the oil-gas apparatus was fixed, were being cleaned. In these cellars was an accumulation of putrid oil and dirt, which adhered to the sides of the tanks and floated on the surface of the water. Water was being pumped into the tanks, and the workmen continued until the oil on the surface ran over and covered the passages ankle deep. The workmen were moving about with candles, and, by some mishap, the accumulation on the floor ignited. At the same time, there was an escape of gas from one of the gasometers, and this mixing with the burning oil-vapours, an explosion was the natural result.

Nearly thirty years later—on March 5, 1856—Covent Garden was once more demolished. This time, happily, no lives were lost, but the attendant circumstances were sufficiently terrible. Professor Anderson, the then well-known 'Wizard of the North,' had been concluding a successful season with a 'Grand Carnival Complimentary Benefit and Dramatic Gala.' Such an entertainment naturally brought together many revellers of questionable character, and it is said that 'at a late hour the theatre presented a scene of undisguised indecency and drunkenness.' At daybreak, however, many of the maskers had disappeared, and when the fire broke out, about two hundred only remained. About a quarter to five, Professor Anderson told the band to play the national anthem, and ordered the gas-man to lower the lights. The gas-man proceeding to obey the order, happened to look upwards, and saw fire breaking out in the ceiling; and the horrors of the moment may be imagined by his exclamation:

'The house is on fire! Get out for your lives!'

The gas was immediately extinguished, and terror seized on all. Fortunately, the maskers were able to escape with the assistance of the police, and in a couple of hours the building was laid low. The excitement caused by this conflagration was widespread, extending even to royalty, as the Queen, Princess Royal, Prince Albert, and the Prince of Wales visited the ruins the following day. Whatever the cause of this catastrophe may have been, a fact which came out at the inquiry held afterwards is worth noting. It appeared that the central chandelier of eight hundred burners was ten or twelve feet from the carpenter's shop, which, with the painting-room, extended right over the ceiling. 'The burners,' says the Report, 'had been lighted at twelve o'clock on Monday, had burned brilliantly on Monday night, had been turned low when the performance was over, had burned glimmering during the night and following morning, and had been turned on to their fullest extent when the revels of the masked ball had commenced.' When to this is added the information that the firemen were forty consecutive hours on duty, rendering vigilance an impossibility, the cause of the fire might easily be guessed. Strange to say, this was the third theatre burned down during Professor Anderson's tenancy—one in New York, the other in Glasgow.

The destruction of the Italian Opera House in Paris, on January 14, 1838, constitutes one out of the many instances of fires breaking out in theatres immediately after the departure of the audience. The audience had scarcely retired, when a fire broke out in the musicians' saloon, which was heated by a stove and two hot tubes. There was a hard frost at the time, and water, consequently, was obtained with difficulty. In a few hours the building was demolished, while five firemen and M. Severini, the acting-manager, perished in the flames.

Further down the list may be noticed one of the most disastrous panics of the century, which occurred at the Theatre Royal, Dunlop Street, Glasgow, in 1849. Here, as is too often the case, a false alarm of fire caused the people to lose their heads, with the inevitable result of losing their lives as well. To give a flip to the popularity of the theatre, the prices to the upper gallery had been reduced to threepence, a price which crowded the gallery with about five hundred people, mostly lads. Just as the first act of *The Surrender of Calais* was concluding, an alarm of fire was given from the crowded gallery. The alarm was occasioned by a piece of paper being thrown down after lighting a pipe, and this igniting a small escape of gas—which was, however, immediately extinguished—gave colour to the alarm. In vain the gallery boys were implored to keep their seats; in vain were they told that danger did not exist: the inevitable rush ensued, and sixty-five corpses were added to the awful total caused by senseless escapades.

Another fatality, which will doubtless be in the memory of many of our readers, was that which occurred in the Theatre Royal, Edinburgh, in 1865, when six lives were lost, including that of

the Dean of Guild, Mr George Lorimer. Here, as at the recent disaster at Exeter, the fire began in the 'flies,' though, fortunately, it broke out an hour or two before the audience had assembled.

A curious and, unfortunately, almost isolated instance of presence of mind in an audience occurred in Plymouth in January 1863. During the performance of the pantomime, a feeling of uneasiness spread over the audience, owing to a strong smell of fire; but on a strict examination of the theatre being made, confidence was restored, and the performance proceeded without interruption. After the audience had departed, Mr Newcombe, the manager, and others, wishing to make assurance doubly sure, re-examined every part of the building, and found everything in a seemingly safe condition. Soon after, however, a fire broke out in the property-rooms. Had the audience imitated the fool-hardiness of the gallery people at the Glasgow theatre, loss of life would probably have been unavoidable.

Another instance of presence of mind preventing a fatality occurred at the Surrey Theatre in 1865. The pantomime had just concluded, and the audience was leaving the building, when the fire broke out in the ceiling above the central chandelier. The stage-manager, advancing to the footlights, implored the people to disperse quietly, which advice, fortunately, they were sensible enough to follow, and, in consequence, loss of life was prevented. When it is known that in less than half an hour the theatre was in flames, and that the pantomimists were obliged to make their escape in the grotesque costumes they were then wearing, sufficient will have been said to indicate what might have been the result had the stage-manager's advice been unheeded.

Quite different was the conduct of the audience at the Victoria Music Hall in Manchester on July 31, 1868, when about two thousand persons, principally boys of the 'arab' type, were present. Late in the evening, some youths were standing on benches in front of the pit; one or two of the benches gave way, and some of the lads, to save themselves a very trifling fall, clutched at a slender gas pendant. The gaspipe broke, but was at once plugged with paper by some one whose presence of mind was considerably more developed than that of his neighbours. No harm would have resulted, had not some foolish fellow raised the cry of fire. The usual consequences followed. Out of one thousand people in the two galleries, scarcely twenty refrained from joining in the rush, in which twenty-three people were killed.

Another Music Hall panic, even more serious than that at Manchester, occurred in the Colosseum Music Hall in Liverpool in October 1878. In this instance a fight gave rise to some confusion, during which some nervous person cried 'Fire.' The scene which ensued was terrible. The people rushed headlong down-stairs; the usual barrier presented itself; a mass of struggling humanity was soon piled up, and the lives of thirty-seven persons were sacrificed to meaningless terror.

The destruction of the Opera House at Nice, in March 1881, when sixty-two lives were lost; the terrible disaster at the Ring Theatre, Vienna, which occurred in December of the same year, causing the loss of nearly a thousand lives; the

equally fearful conflagration in the Circus at Berditchey in January 1883; the Sunderland calamity in the same year, which sent nearly two hundred poor children to their last account; and the Star Theatre disaster at Glasgow, in November 1884, are all too well within our recollection to require comment here. To recapitulate their horrors would be not only unnecessary but absolutely painful. While most of us can profitably contemplate calamities of bygone years, there are few who can complacently recall fatalities within their own remembrance without feeling that they may possibly be the innocent cause of revivifying, in many a home, memories which are all too recent to be subjected to the thoughtless observation of the stranger.

Without referring, therefore, to more recent events, let me turn to a few of the causes which have brought about some of the theatre catastrophes chronicled in the century's history. The gasometer explosion at Covent Garden mentioned above is happily but a rare agent in stage calamities; not so the use of firearms on the stage; from this cause alone many a theatre has been destroyed and many a life lost. When the Garrick Theatre was burned down in November 1846, there had been a performance of *The Battle of Waterloo*, and, in all probability, a piece of burning wadding from a cannon had lodged in the 'flies,' while a similar fatality once occurred at Astley's after a performance of the same piece. To the use of mimic fire on the stage must also be ascribed the destruction of the Pavilion Theatre in Whitechapel in 1856. A drama entitled *The Red Crow* had been performed, one of the principal scenes in which was the burning of the *Robin Hood* tavern. When a slight fire occurred at the Munich Opera House in August 1879, it was found that a flash of artificial lightning had set fire to some gauze clouds, though in this case a steel fireproof drop-scene was immediately lowered, thus cutting off the stage; and the audience dispersed without accident. In November 1883, when the Theatre Royal, Darlington, was burned to the ground, it turned out that a display of fireworks had been given the previous evening. One would think that warnings such as these would prevent theatrical managers risking both lives and property in unnecessary pyrotechnic displays, yet there are theatres even now the patrons of which insist on 'a grand display of fireworks' as each fifth of November comes round. The present writer has sat in a theatre and witnessed such a display, while between three thousand and four thousand people cheered lustily, and firemen stood with hose at the wings to put out the sparks as they fell! Surely the time has arrived when dangerous exhibitions of this description should be firmly suppressed.

To recapitulate the numerous instances in which the 'flies' have been the starting-point of theatre fires would be but to bring to light many well-known disasters. The burning of the Theatre Royal, Edinburgh, in 1865, mentioned above, originated in the 'flies.' The gas-man had been lighting the 'battens,' when the drapery caught fire, and he barely escaped with his life. To probably the same locality may be ascribed the origin of the burning of Her Majesty's Theatre in 1867. Either in the 'flies' or in the property-room above them began the fire which destroyed

the Leeds Theatre in 1875; and the terrible disaster at Vienna was supposed to have been caused by a lamplighter inadvertently setting fire to a large veil required in one of the scenes.

Another prolific cause of fire—but one which, for obvious reasons, it is impossible to deal with in detail—has been the carelessness of the workmen employed about a theatre. Thus, in June 1861, some plumbers were at work on the roof of the Surrey Music Hall. On going to dinner, they left their fire behind them in a place which they supposed to be safe. On their return, a small portion of the roof was found to be on fire; and as there happened to be no appliances at hand to procure water, the fire obtained the mastery, and in three hours there were but four bare walls remaining. A somewhat similar cause brought about the entire destruction of the Alexandra Palace in 1873. Workmen had been repairing the lead-work in the roof of the great dome. A piece of charcoal dropping from a brazier set fire to some timber and papier-mâché, and in less than two hours the building was destroyed. Again, when the Czech National Theatre at Prague was destroyed in 1881, it was found that a smith had been fixing a lightning-conductor in the roof, and that the conflagration had originated there.

Having enumerated a few of the causes and effects of some of the more notable theatrical fatalities, let me conclude with a brief reference to the preventives proposed. Perhaps the most generally discussed—and it might be fairly assumed the most generally accepted—safeguard is the iron curtain. Taken for granted that the fire in most cases originates on the stage, the very natural idea suggests itself that the first thing to be done is to sever the connection between stage and auditorium. Unfortunately, the iron curtain is not always an infallible safeguard, for although it probably prevented a panic at Munich in 1879, yet the Berlin National Theatre was totally destroyed in 1883, despite the iron curtain and use of incombustible scenery. Iron curtains, too, have an unfortunate knack of getting out of order just when they are most wanted, so that until they become more easily accessible in cases of sudden necessity, their utility is questionable. That they could be made more easily accessible, goes without saying. Were they—to quote the happy idea of the practical editor of *The Stage*—'painted and used as act-drops,' there is no good reason why they might not be utilised in any emergency. The more general use of electric light instead of gas might be another means of lessening the number of fatalities in theatres; while the prohibition of open fireplaces, limelight tanks, and carpenter's and property-maker's shops within the main walls of the building, would undoubtedly tend to make theatres much safer than they are at present. Then, again, the removal from the stage of all scenery not in actual use, and especially—when not needed—such scenery as 'borders' hanging from the 'flies,' ought to be insisted on; while the hydrants, buckets, &c. at the 'wings' and 'flies' should be inspected regularly by some competent person. It is this want of inspection which often renders the most perfect appliances useless in time of need. On an Atlantic passenger steamer, the carpenter is

obliged to visit and test twice each day every bulkhead in the ship, while the seamen are regularly drilled in every probable circumstance of a fire or wreck at sea. Why not apply the same discipline to theatre employees?

In spite of the most elaborate precautions, however, fires will occasionally occur, and as the safety of the audience is after all the first thing to be considered, the real remedy consists in the construction of proper and unimpeded exits, instead of the tortuous corkscrew passages which are too often *en évidence* in the older places of amusement. I lay a stress on unimpeded exits, for, though wide and roomy passages may be built *ad infinitum*, they will be of little service if impeded by a barrier, which, however useful for the orderly admission of the audience, is decidedly disadvantageous to their chances of getting out alive should a panic of any kind occur. Will it be believed that in a well-appointed theatre I happened to visit a week or two after the Exeter disaster—a theatre, too, which possessed admirable exits, and in which the spaces between the rows of seats in all parts of the house were everything that could be desired—that even here a barrier, firmly fastened by an iron bar, extended more than halfway across one of the passages, and was not unhinged until the performance had almost concluded! Doubtless, the barrier was necessary to enable the check-taker to pass the people into the theatre; but surely common-sense should have suggested its removal immediately the performance had commenced.

After all, the greatest and most effective preventive of loss of life in theatres rests with the audience itself, namely, presence of mind. Were the people to 'keep their heads,' to use a homely phrase, fatalities would seldom occur. This was happily instanced in the Casino in New York in September last during the five hundredth performance of *Erminie*. Naturally, such an event brought together a crowded audience. Suddenly large volumes of smoke drifted into the auditorium; but the audience took matters quietly, and it was soon found that practically no danger existed, as the smoke came from a burning store adjacent to the theatre. In nine cases out of ten, a little presence of mind on the part of the audience would reduce risk to a minimum; and could people only be induced, in case of fire or other danger, to leave the theatre as orderly as they generally do when the orchestra plays the national anthem, the death-list of the theatre would become almost a thing of the past.

## RICHARD CABLE, THE LIGHTSHIPMAN.

### CHAPTER XLIX.—A DROPPED 'S.'

RICHARD CABLE wheeling a barrow that he had borrowed from the stables, laden with Josephine's box, went out of the grounds of Bewdley Manor, and Josephine walked at his side.

'Richard,' she said, 'how comes it that you are lame?'

'You have lamed me.'

'Richard,' she said, 'how oldened you are.'

'You have oldened me.'

'And bent?'

'You have bowed my back.'

'Do not speak unkindly to me,' she pleaded. 'I know I have done wrong, and am sorry for it.'

'When you break china, can you mend it that the cracks do not show and that it will hold as before?'

She did not answer this question.

'And man's heart, when it is broken, can it be patched up? If you pour love into it again, does not the love run out at all sides and leave the vessel dry?'

'You do not forgive me, Richard?'

'I do not—I cannot.'

'Then why have you come for me now?'

'Because you bear my name, and, to my woe, are my wife, and—I would not have you there, where a stain may come on the name, and where my wife may be—nay, is, lightly spoken of. Mind you,' continued Cable, bending between the handles of the barrow, 'I do not mistrust your conduct. Though he is there under the same roof with you who loved you, and perhaps loves you still, I have no doubt about your conduct. God spare me that! I know you to be proud and cruel, but I know also that you are not light. You have brought me down, but not to such baseness as to think that.'

'I thank you for that, Richard, at all events for that.—Where am I going now? What will you do with me?'

'You are going now to the inn, to Mrs Stokes. Where you go next, what I do with you after this night, I cannot tell; you shall know to-morrow. My head is like the old lightship in a chopping sea.'

As soon as they reached the tavern, Richard brought Josephine in, and said to the landlady: 'This is my wife; take her in for the night; give her my room. I am going out, and shall not be back before morning. If she needs anything, let her have it, and stint her not.' He said no farewell to Josephine, but went out at the door, wiping his brow on his sleeve.

He walked by the river. He had not got his stick, and he cut himself one from the hedge; and as the night was dark and he had to grope among them for a suitable stick, he tore his hands, and they were covered with blood, and when he wiped his brow the smears came on his face. He obtained a good stout stick at last on which he could lean, and he stood resting on it by the river, looking over the slowly flowing water to the dark horizon, and the red glare in the sky beyond over Bath.

The season was autumn, the time when, at the rising of the sun, the whole face of a field and every hedge are seen to be covered with cobwebs strung with dew. And now, in the night, the air was full of these cobwebs; one might have thought they were spun in heaven, and came down charged with water. They drifted in the light air, and the dew that rose settled on the minute fibres and weighed them down, that they came leisurely down—down through the raw night-air. They settled over Richard's head—they fell on his face—they came on his hands, and he was forced to brush them away, because they teased him. There were other cobwebs, in his brain, confusing, teasing that, charged also with drops, bitter and salt; but these he could not sweep away—he thrust them aside, and they spread

again; he squeezed them together and wrung out the brine and gall, and they unfurled and fell again over his brain. They obscured his sight of the future; they troubled his thought of the present; and they all rose, thick, teasing, even torturing, out of the past; and all the myriad threads went back to one root—Josephine. But as in a web there are fibres and cross-fibres, so was it with this inner cobweb—there were some revengeful and others pitiful; some hard and others soft; some of hate and some of love; yet by night, as he stood by the water, striking now with his hand, then with his stick, at the falling cobwebs, he could not distinguish one thread from another; one feeling was so interlaced and intertangled with another, that they were not to be unravelled.

There still lurked in his mind that fear of Josephine which he had first entertained when he saw her on the stranded lightship and heard her sing the mermaid's song; that fear which his mother had detected in him when he lay crippled at the *Maggie*, and which she at once brought back to its true source—love. Richard Cable did not know that there remained any trace of his old love there; he thought that all his feeling for Josephine was anger and resentment; but he was not a man given to self-analysis. He was aware of the ever-presence of pain in his soul, and he knew who had hurt him, but hardly the nature of that pain. We carry about with us for many years, may be, a something in us that never allows us to forget that all is not well—a spasm of the heart, a gnawing pain in the chest, a shooting-needle in the brain, a racking cough, and we do not consult a physician: we may soon outgrow it; it came on after an overstrain, a chill, and a long rest will recover us of it. What it is, we do not know; we generally attribute it to a wrong cause, and regard it as that which it is not. It is so also with our mental aches—we have them; we go on enduring them, and often wholly misinterpret them. Richard supposed that he had acted out of regard for his own name, that the fever and alarm he had felt were occasioned by no other dread; but when he sprang up from Mrs Stokes' table and hurried to the manor-house to fetch away Josephine, he had not thought about the preservation of the name of Cable from a slur, only of her—of her in bad moral surroundings; of her exposed to slights, and perhaps temptations. On this night, the sight of her in her quiet servant's dress, with her face pale, the eyes deep, the lines of her countenance sharp drawn, had strangely affected him. He thought that it had roused in him his full fierceness of resentment for wrong done; but he was mistaken—the deepest bell in the rugged belfry of his heart had never ceased thrilling from the first stroke dealt it; and now it was touched again by the sight of her face and the sound of her voice, and the whole mass quivered with its renewed vibrations. Though the dew fell heavily, Richard Cable did not feel the moisture; and though there was frost, he was not cold. The night was long, but he was unaware of its length.

He did not return to the inn till morning, and then he had formed a plan, and he had gained the mastery over himself. Early though

the hour was when he arrived, he found Josephine already down. Contrary to his former frank ways, he did not look her full in the face; he felt his weakness, and would not venture to do so. He spoke to her only when necessary, and with restraint in his tone. The voice was hard and his face drawn and cold.

'I truck my young calves to Exeter,' he said. 'We will go thither by train. After that, you will have to come the rest of the way in my conveyance, unless you prefer the coach.'

'No,' answered Josephine; 'I will go with you.'

He drew a weary breath; he would have preferred to send her by the coach. The oppressiveness of a journey with her was not to be contemplated with composure.

'Then,' said he, 'we will start at once; that is, when I have got my calves in truck. The train is at ten-fifteen. You will be at the station. I will speak to a man to fetch your box, and I will pay him. Have it ready labelled for the *Clarendon Hotel* at Exeter.'

'The *Clarendon*! Is that where you stay when there?'

'The *Clarendon* is where you shall be. You will be well cared for there; it is a good hotel, the best in Exeter; it looks out on the close, and is very respectable.'

'Shall you be there, Richard?'

'No; I go elsewhere. Calves are not taken in at first-class hotels.'

'But I had rather, a thousand times rather, be with you.'

'I have my calves to suckle. I must go where I am accustomed to go, and where I can get milk for them.'

'But why should I not go there too? I will help you with your calves.'

He laughed harshly. 'You are a lady.'

'I am a servant-girl out of place,' she said with a faint smile.

'They drink and swear and fight where I go,' he growled.

'No, Richard—you go to no place that is bad. Where you go, I will go also.'

He did not look in her face; he could hardly have resisted the appeal, had he done so, her face was so full of earnestness, so pale and anxious, so humble, and the eyes so full of tears. Perhaps he knew that he could not resist, were he to meet her eyes, so he kept his own averted. But the tones of her voice thrilled him, and made his head spin. He bit the end of his whip, with his brows knitted. He knew her great eyes, those lovely eyes that went through him when he met them, were fixed on him; but he would not turn towards them; his face became more frozen and drawn.

'You,' he said—by her Christian name he would not call her—'you—understand me. I am not Richard to you. You must speak of me and address me as Mr Cable.'

'But—I am your wife.'

'No,' he said; 'that is all past and for ever done with. For a little while, and then the tie was torn away by yourself. You are coming with me into Cornwall, to St Kerian. There you will live as you like. If you want money, you shall have it; but you shall not live there as my wife, but as Miss Cornellis, or by any other name you like to assume. My mother will see you want

nothing; you shall not live in my house; you will be a stranger there; but my mother—and I, yes, and I, will know how you are, what you do, and that you do not again fall into evil company, and run the risk of'—

'Of what? I ran no risk.'

'No,' he said; 'you ran no risk. No. You are proud, proud as Satan; and yet Satan, for all his pride, fell.'

The tears which had formed in her eyes rolled over her cheeks. The disappointment was very great. She had hoped that he was going to take her back to himself. 'You need have no fear for me,' she said in a voice half choked with her tears; 'I have that in me which will always hold me true and upright. Not pride; O no, not pride—that is broken long ago, ever since I found I had driven you away.'

'What is it?' Still he did not look at her, but he turned his ear attentively towards her. She might have seen, had not her eyes been so dim with salt, that a nerve down the side of his face from the temple was twitching.

'It is, that I love you,' she answered in a low, faint voice, but little above a whisper.

Then he stamped on the sanded floor of the village inn parlour and clenched his hands, and stood up and shook himself, like a great hairy dog when it leaves the water. 'Ha, ha!' he laughed; 'as of old, to patronise and play with, and then break to pieces, as a child loves its doll. I will have none of your love. I have tasted it, and it is sour.'

'Richard!'

He struck the table. 'I am not Richard—to you. That is part of your grand condescending ways. You shall call me Mr Cable. Who knows!—in time you may come to look up to me, when I am rich and esteemed. Mr Cable of Red Windows, Esquire.' Then he went forth tossing his shoulders, and he put on his hat in a hot and impatient way.

A struggle ensued in Josephine's bosom. It was hard for her to go down into a strange country and there live, in the same village with her husband, without being acknowledged by him, divided by all England from her own friends. He was asking too much of her, putting her through too sharp an ordeal; and yet, after a little boil up of her old pride and wilfulness, she bent to his decision. It was not for her to rebel. She had wrought the disunion that subsisted between them; she had made the great change in him; and she must submit, and suffer and wait, till he took her back. She must accept his terms, not impose terms of her own.

She was at the station at the time appointed, and Richard handed her a second-class ticket to Exeter. He travelled in the van with his calves, and she saw nothing of him till their arrival. Then he came to the carriage door, called a cab, shouldered her box himself, and limped with it to the carriage. 'To the *Clarendon*,' he said, shut the door, and climbed on the box.

On reaching the inn, an old-fashioned hotel, looking out on the close with its great trees and gray cathedral, he descended, let her out of the cab, and preceding her, ordered the waiter to let her have a room. 'The lady—she is, mind you, a real lady—she must have a good room, and a capital supper, and a fire, and be made

comfortable.—Don't you stare at me as if I had aught of concern with her. I'm a common man, a cattle-jobber; but I'm charged to see after her, and that she be well attended to, as a real well-born lady full of education and high-class manners. As for me, I put up elsewhere—at the *Goat and Compasses*, down by the iron bridge. I'll come in the morning and fetch her away. It is my duty, set me by them as are responsible for her, to see that she be cared for and made comfortable.' Then he went away.

Josephine was given a well-furnished bedroom, with a large window, looking out on the elms and grass and old towers. Her box was in the room; and she opened it, and drew from it some little things she needed. Then she bathed her face, and seated herself by the window, looking out into the quiet close. The bells of the cathedral were ringing for afternoon service, deep-toned musical bells. The autumn had touched the leaves and turned them. The swallows were clustering on the gray lead roof of the minster, arranging for migration. There was coolness in the air; but it was not too chilly for Josephine to sit at the open window, looking at the trees and listening to the bells. She felt very lonely, more lonely than at Bewdley. There she had the association with old Miss Otterbourne to take off the edge of her sense of solitude; but now she had no one. She was with her husband, yet far removed from him. She was associated with him without association. It was better to be separated altogether, than to be in his presence daily without reciprocation. She drew her wedding ring from her bosom and looked at it. The night before, she had put it on, and had hesitated whether to wear it again; but had rehung it round her neck, determined to wait another day and see what her husband's wishes and intentions and behaviour to her were, before she did so. And now, as she looked sorrowfully at the golden hoop, she knew that it must continue to hang as before; he had forbidden her to acknowledge her tie to him and to wear his name.

How strange is the perversity of the human heart! She had married Richard without loving him; and now that she had lost him, she loved him. Her love had started up out of her anguish over her wrong done him. He had loved her when she had only highly esteemed him; and now she loved him when he despised her.

She knelt by her box and looked over her little treasures. They were few. Her bullfinch she had not brought away; she had given it to the housemaid who had cleaned her room. She turned over her few clothes in the box and unfolded Richard's blue handkerchief. In a cardboard box was the bunch of everlastings. They were now very dry, but they retained their shape and colour. 'Everlastings!' she said, and recalled the night in the deserted cottage when she asked the rector whether he was looking up at the everlastings. 'To the Everlasting,' he had answered, and she had not understood him; but she remembered the scene and the words he had used.

The cathedral bells had ceased, and across the close came the sounds of music—the roll of the organ and the voices of the choir. Josephine closed her box and locked it, and went back to the window and listened to the soothing strains. Then, drawn as by an irresistible attrac-

tion, she went down stairs and crossed the close and entered the side door of the cathedral. She did not go far; she made no attempt to enter the choir, but seated herself in the aisle on the stone seat that ran along the wall. The evening light shone through the great west window, and filled the upper portion of the nave with a soft yellow glow. Below were the gray pillars and cool gray shadow. There were few loungers in the nave, and she was quite unnoticed. Her love of music made her always susceptible to its influence. The effect of the sacred music in the great Gothic minster on Josephine, in her then state of depression, was great: it soothed her mind; it was like breath on a wound, lulling the pain and cooling the fever.

For long there had been in Josephine a craving for help, for something, or rather some one whom she could lay hold of and lean on. It was this want in her which had driven her to take Richard Cable, in defiance of her father's wishes and of the opinion of the world. Richard had failed her; and she had cast herself into a sphere in which she was as solitary and lacking assistance as much as in that she had occupied before. And now, once again, she was torn out of that sphere, and was about to be cast—she knew not where, among—she knew not what companions—and again she was without support.

She sat with her head bowed and her hands clasping her bosom, listening to the music. Her soul was bruised and aching, like the body that has been jolted and beaten. But the hurt body is cast on a bed and sleeps away its pains. Where is the bed of repose on which the weary suffering spirit can stretch itself and be recruited? Josephine was not thinking at all; she was feeling—conscious of want and weariness, of a void and pain. The aisle in which she was, was on the north side of the church; and quite in shadow, only in the beautiful vault of the nave, with its reed-like spreading ribs, hung a halo of golden haze; and in that golden haze the sweet music seemed to thrill and throb.

The pain in Josephine's heart became more acute, and she bent on one side and rested her elbow on the stone seat and put her hand to her heart, and breathed laboriously. The attitude gave her some ease; and as she half reclined thus, the waves of golden light and angelic music swept over her, softly, gently, as the warm sea-waves used to glide in over the low Essex coast. Presently, Josephine slid down on her knees and laid her head on the cold stone seat. Then only did the meaning of the rector come clear to her, when he dropped an *s* as she spoke of the everlastings, and he answered her, that he looked to the Everlasting.

(To be continued.)

#### SOME LITERARY RELICS.

CHARLES LAMB, in one of the most delightful of his essays, 'The Two Races of Men,' warns his reader to be shy of showing his books; but he says: 'If thy heart overfloweth to lend them, lend thy books; but let it be to such a one as S. T. C.—he will return them (generally anticipating the time appointed) with usury; enriched with annotations, tripling their value. I have had experience.' One of these doubly valuable

books, the folio *Beaumont and Fletcher*, published in 1616, is now in the British Museum. It contains many marginal notes both by Lamb and by Coleridge. Notable amongst those by the latter is the following: 'N.B.—I shall not be long here, Charles! I gone, you will not mind my having spoiled a book in order to leave a relic.—S. T. C., Oct. 1811.' Every book-lover must envy the Museum the possession of this relic. It is the identical volume whose acquisition 'for the mighty sum of fifteen—or sixteen shillings, was it?' Lamb describes with such pleasurable zest in the essay on 'Old China.' After his death, it passed into the possession of Lieutenant-colonel Francis Cunningham, at the sale of whose library it was purchased for the national collection.

An even more desirable possession than one of Lamb's books would be the original draft of one of his essays. One such manuscript, that of the famous 'Dissertation on Roast Pig,' was sold at Sir William Tite's sale in June 1874 for thirty-four pounds. Another interesting relic of Lamb, now in private hands, is the copy of the first edition of Milton's *Paradise Regained*, which, in 1820, the essayist gave to Wordsworth, with the following quaintly phrased inscription on the page opposite the title: 'C. Lamb to the best knower of Milton, and therefore the worthiest occupant of this pleasant edition—June 2, 1820.' Volumes so enriched must always be objects of interest to the lover of letters. A few more examples may be mentioned. The library of Trinity College, Cambridge, is fortunate in the possession of Dryden's own copy of Spenser's works, with manuscript notes by the former poet. Two small volumes of Milton, the Edinburgh edition of 1755, formerly belonging to Robert Burns, and bearing his autograph on their title-pages, are now in the library of St Paul's School. There is a note inside the cover of the first volume, apparently in Burns's own hand, to the effect that the books were a present from Lord Monboddo. They were given by the poet's widow to R. H. Cromek; and from Cromek's granddaughter they were purchased in 1879 for the library of the school in which Milton was educated. Keats's copy of *Beaumont and Fletcher*, with the many underlinings which the poet was so fond of making in his favourite books, and his Bacon's *Advancement of Learning*, full of manuscript notes, are both in the possession of Sir Charles Dilke. Pope's annotated copy of Garth's *Dispensary*, Swift's own copy of the *Dunciad*, and Johnson's own corrected copy of his *Lives of the Poets*, were all bequeathed by John Forster to the South Kensington Museum.

Among other interesting literary relics in the Forsterian collection now to be seen at South Kensington are Goldsmith's chair and the original assignment of *Joseph Andrews* in Fielding's own handwriting. This valuable paper was sold at Mr Jolley's auction in July 1861 for ten shillings only, and was afterwards purchased by Mr Forster at the Daniel sale for nine guineas. The original assignment of *Tom Jones* was sold at the Jolley sale for twenty-two shillings; but its present whereabouts is unknown. A substantial relic of the great novelist was lately presented to the Somerset Archaeological Society by Mr Merthyr Guest. It is a large and solid oaken table, made for and used by Fielding when he lived at East

Stour Manor-house. It bears on a brass plate the following rather unkind inscription: 'This table belonged to Henry Fielding, Esq., novelist. He hunted from East Stour, 1718, and in three years dissipated his fortune keeping hounds.' A curious relic of one of Fielding's contemporaries, John Gay, was discovered in 1882 at Barnstaple. At that time the parish church was undergoing the process of restoration, and amongst the pieces of timber removed from the interior was a part of a pew with the name 'John Gay' and the date '1695' cut into it. As the future author of the *Beggars' Opera* was then ten years of age, and as no other John Gay appears in the parish register, there can be but little doubt that the fragment was the poet's own handiwork.

Longfellow was in possession of many valuable mementos of poets of the past. He wrote from Coleridge's own inkstand, which was given to him by Mrs S. C. Hall, and also owned the inkstand of George Crabbe. The latter was presented to the poet Moore by the sons of Crabbe, and was bequeathed by Moore's widow to Mrs S. C. Hall, by whom it was sent to the American poet. The Irish harp which belonged to Moore is now in the possession of Mr George W. Childs of Philadelphia. A curious old bronze inkstand, loaded with figures, which once belonged to Ariosto, is described in one of Shelley's letters to T. L. Peacock. 'Three nymphs lean forth from the circumference,' says Shelley; 'and on the top of the lid stands a Cupid, winged and looking up, with a torch in one hand, his bow in the other, and his quiver beside him.' Truly, a fit receptacle for the ink to feed the poet's inspired pen. In Hone's *Table Book* there is an account, with a woodcut, of the standish once used by Petrarch. A large old-fashioned ebony inkstand which Gray used whilst composing his famous *Elegy* is now in the possession of a Lincolnshire gentleman. There are several manuscripts of the *Elegy* in existence, in Gray's own very neat handwriting, so that no one copy can claim to be the original; similarly of another famous poem, Burns's *Scots wha hae*, the Address at Bannockburn, there are several 'original' manuscripts known. One copy in Burns's writing, framed and glazed, and enclosed in a mahogany case, sold at Sotheby's in August 1867 for twelve pounds. The Burns Museum at Kilmarnock contains many articles of interest relating to the poet, amongst them being his chair, and a perfect collection of the various editions of his works, made by Mr McKie, a bookseller of the town. A very characteristic relic of the author of *Tam o' Shanter*, his punchbowl, was sold by auction at Dumfries early in 1877, and realised ten guineas.

We doubt whether Dr Johnson would have set much value upon Gray's inkstand; he thought but little of its owner. Boswell tells us how one day at Thrale's the doctor attacked Gray. It had been denied that Gray was dull in poetry. 'Sir,' replied Johnson, 'he was dull in company, dull in his closet, dull everywhere. He was dull in a new way, and that made people think him great. He was a mechanical poet.' The dictatorial doctor is the presiding divinity of the Museum at Lichfield. There are to be seen his snuff-box, cup, cribbage-board, and—mute witness of conjugal affection—the saucer on which his breakfast roll was placed every morning, and which he called 'Tetty,' in memory of his wife.

In November last, at the sale of the effects of the late Joseph Maas, there was sold a tall eight-day clock in a wooden case inlaid, which was said to have been made for and during many years owned by Izaak Walton. This venerable 'ticker,' as Rawdon Crawley would have called it, was bought by Mr Sabin, of Garrick Street, for £70, 17s. 6d. The clock, apart from its association with Walton, is valuable on account of its age and capital condition. Walton was born in 1593, and lived until 1683.

There are some relics, now apparently completely lost, that one would like to have news of, as, for example, that fan which Pope painted himself for Miss Martha Blount. It came into the possession of Sir Joshua Reynolds, was stolen from his study, and has never been heard of since. There are others as to the genuineness of which we would like to have further proof. More than twenty years ago it was stated in the newspapers that a flute which had formerly belonged to Bunyan, and which had helped to while away the tedium of his imprisonment, was at that time in the hands of a tailor at Gainsborough; and in 1875, Bunyan's clock was said to be in the possession of a descendant of his, then resident in Australia. Both these relics would probably stand in need of authentication. A Bible printed at Cambridge in 1637, and having the signature 'John Bunyan' on the title-page of the New Testament, is now in the Summer collection in the Harvard College Library, and would appear to be a genuine relic of the immortal dreamer.

The various objects that we have mentioned, with many others for which we have not space, would be valued by all book-lovers, although they can be owned but by few. To all, however, is possible the acquisition of the best and the most valuable of relics of the great writers and thinkers of the past—their immortal works.

## THE JULLABAD TRAGEDY.

### CHAPTER V.—CONCLUSION.

I was left alone to read the letters. Long I regarded the handwriting on the two envelopes before I had enough courage to open them. No prisoner ever shrank from his sentence more than I did from the loving forgiveness which I knew both these letters to contain, and which I deserved so little. They were of course from my mother and sister. As they differed only in expression, I can give the substance of both in that of my mother. Never was news from home more surprising or unlooked-for. The first thing that struck me was the address; instead of being written from the old apartments in Brompton, here was thick paper, bearing on the left-hand top corner the old crest of our family, and on the right the imposingly enamelled words: 'Monk's Dene, Chislehurst.'

What had happened since their last communication to me a month ago? This: my mother's brother had died in South America, and left her a fortune worth, when invested in good securities, eight hundred pounds a year! This had happened two months ago; but she and my sister had kept it secret from me until everything was settled and they could give me a surprise.

I could not keep back my tears. I was weak, and they flowed freely; had I been strong, they

would have come just as gratefully. Dear, dear mother! To know that she and Agnes had now sufficient to give them those comforts and attentions which they had lacked so long, and pined away inch by inch through the lacking of—to know this was to open the floodgates of my heart's gratefulness without a thought of my underserving self. But *they* had thought for me, and more than enough.

'And now, good-bye, dear, dear Charlie,' my mother concluded, 'until I press you once again to my bosom at Gravesend!'—'Good-bye, darling brother,' Agnes wound up, 'until we meet you, and pay our thanks to this dear Lady O'Reilly, who has so kindly told us all about you. We are only distressed by the thought that we shall not have *somebody else* to welcome too—poor dear Charlie!'

This brought me back to where I was. How had Lady O'Reilly been in communication with them? She had told them my story—*how* she would tell it, I knew too well—but when or where? My mind was very confused, and I was under a half-delusion that Lady O'Reilly had just been to England—by some unknown route—and come back to meet me on the sea. This was only for a minute or so. I put the dear letters to my lips, then placed them under my pillow, to be read again and again, and waited. Lady O'Reilly would soon be back to my cabin, and then she would tell me all about it.

In half an hour she came, and it seemed so long to me. 'The doctor,' she said, 'believes that if the weather keeps fine—as the captain assures me it will, and must—you may come on deck for a while going up the Channel. It is supposed that English air will quicken your convalescence.'

'These letters,' I answered, 'have quickened it; your kindness has quickened it.—So you have written to my mother, Lady O'Reilly?'

'Of course I have, you foolish boy,' she replied, laughing. 'I knew the lugubrious account which you would give of your troubles; and out of kindness to your mother, I sent her a fairer explanation before I left India. I told her you were not half so black as no doubt you painted yourself.'

'How did they know,' I asked, as it flashed upon me, 'that you would be on the same ship with me? I never dreamt of it myself.'

'They knew because I told them. I promised your mother to wait for you, and take care you didn't jump overboard in a melancholy fit—or anything. You see, you wanted somebody to look after you, didn't you?'

I could say nothing; I was too full of gratitude. I knew, from the reference made by Agnes in the end of her letter to 'somebody,' that Lady O'Reilly had told them the real state of the case with me there; but I held back from speaking to her about this. I resolved to wait and suffer her, if she chose, to open the subject herself. She did not do so: I understood why. What more, alas! could be said concerning the poor girl's fate? One thing I was sure of—Lady O'Reilly had never hinted to my mother and sister the remotest possibility of the guilt of her I had loved—whose memory I would always revere, and whose white innocence I would always canonise in my heart.

I enjoyed a long, delicious, and invigorating sleep that night. I awoke late in the morning, as the ship's bell gave one stroke overhead—half-

past eight—and the pleasant home sunlight came through the open port. I was at once conscious of a new sensation—that of hunger, and I called immediately to the ayah. But I received no answer. Drawing back the curtain, I saw that she was not there. Yet I was somehow conscious she had been there at one time during the night.

By-and-by the doctor came, and he ordered my appetite to be suitably ministered to. The food, and the air, and the composure of mind which yesterday had brought me, all combined to accelerate my recovery, and that afternoon I was able to sit for two hours on deck with my kind and lovely friend. Next day, I was almost able to get up the companion-ladder without assistance, and I stayed above all latterment. The day following we were steaming up the Channel with a delightful south-westerly breeze; and only those who have spent years in the tropics can appreciate the rapture of drinking in such air and feasting one's eyes on the green fields of Old England once again. The steamer stopped at Plymouth to land such passengers as wished to get off at that port. To my great surprise—for she had not given me a hint of her intention—Lady O'Reilly was one of these. I offered no comment—what right had I?—and she sought me where I sat, away aft, to say adieu.

'I shall come down to see you at Chislehurst directly,' she said. 'I want to get off here for a special reason; I had intended going on with you.'

I did not feel warranted in inquiring Lady O'Reilly's reason for landing at Plymouth, and from her manner of waiting after she had told me this, I fancy she expected me to say something about it.

'And now, adieu. Be careful of yourself, for— for your mother's sake, until you reach Gravesend. Perhaps,' she added with a smile after a moment's thought, 'you will find a note from me awaiting you there.' Then she went away, leaving me thinking over her last words. A note from her—about what? An excitement which I could not analyse was gathering in my breast. But she was gone, and I could not ask her meaning. Gone, too, I presently thought with a sensation of shame and self-reproach, without carrying from me one word of thanks to that gentle Hindu girl who had been so kind and attentive a nurse to me. Surely the ayah must think her patient ungrateful and unfeeling, little as natives look for thanks at the hands of the superior race for any services rendered. But I resolved that she should have such bangles as would convince her I was neither forgetful nor ungrateful. This may seem a small matter to the reader; it was no small matter to me, or I should not dwell upon it.

The old Thames at last, with its low shores and its mighty freights; but picturesque and lovely to the eyes of the returning exile! It looks like the wide welcoming opening of the heart of Home after one's long absence; and the crowd of us on the steamer's quarter-deck were mostly silent, or spoke low, because of the fullness of feeling within. Dear Old England! even if they are but coming back to lay their wasted frames in one of your quiet churchyards, your breath brings a tinge to the pale cheeks and a light to the hollow eyes of the returning wanderers.

My mother and sister were there, awaiting me. I saw them only for a moment, their dear faces eagerly watching for me on the deck of the slow-moving steamer—only for a moment, for my eyes filled with tears, which blinded me. I must pass over all this.

It was not until we were in the railway carriage, speeding along through the delicious air of Kent, that I opened the note which had been unfailingly awaiting me. Hard pressed as I was on each side by the loving caresses of mother and Agnes, I had for the moment to forget their presence in the mystification of Lady O'Reilly's brief message. It was written from Plymouth, immediately after landing, and this was what it contained:

'I and ayah are just starting for London. Had you forgotten her when parting from me, that you had no word for her? I hope at least you will not forget the bangles, for the poor thing will certainly expect them—and has earned them more than you know of. I shall come to Chislehurst to see you in a week from to-day, as I am of opinion that you will by that time be strong enough to endure a shock without its killing you. I am sorry to be the agent of a business of this dangerous kind, but I cannot shirk it.—Give my love, please, to your mother and sister.'

It was of no avail to speculate on the hidden significance of this strange letter. I gave it up at last, though the words were constantly present to me. Only two points stood out clearly—the ayah must not be forgotten, and the news Lady O'Reilly was bringing to me was good news. What else could it be? Only my ignorance of it kept me in a nervous state of expectancy.

When I told them at home of my illness on the voyage, Agnes went to London herself and brought back the bangles. I would give them to Lady O'Reilly when she came, and then the ayah would no longer think of me as unmindful of her services. Even the near prospect of discharging some portion of a debt of this nature is comforting.

There was an arbour in the garden of my mother's house which, as soon as I discovered it, became my favourite nook. The weather was delightful, and the sweet air of the sweetest spot in England was a draught of delicious intoxication. Here I lounged most of the day, reading, smoking, doing nothing, by turns, until the gloomy events out in India began to seem to my memory like a dream. The scenes around were so different from those with which my great grief was associated, that I could not avoid softening under their benign influence.

Lady O'Reilly came a day earlier than I expected, and quietly surprised me in my retreat. She was alone; and the radiance of her lovely face I had never before thought so bright.

'You do not look like the agent of a dangerous business!' I exclaimed, referring to the language of her letter as I sprang to my feet and took her hand. 'Ah, Lady O'Reilly, you are welcome—welcome, welcome, for your own sake.—But please sit down and tell me what it is!'

'I have had news from Jullabad,' she answered, smiling—'a letter from my husband. It came overland, and I received it on board at Ply-

mouth, which was partly why I disembarked there.'

News—news from Jullabad! How my heart beat! I could not have uttered a word to save my life.

'The mystery has been cleared up. The innocence in which your faith, and mine, were never for a moment shaken, has been established. Is not this news?'

'Thank God for it!' I answered. 'Alas, alas! she was done to death all the same!'

'Let me tell you how it was. The cook, Sinya, was the man who fired the bungalow. It was discovered by another native with whom he quarrelled in the bazaar, and the man himself has confessed everything. He wanted revenge. But to save his mistress, and at the same time turn suspicion on her husband and from himself, he adopted that strategy which has been the source of so much mystery. He dressed himself in Colonel Humby's clothes, and roused Mrs Humby to her danger by pretending to strangle her. She saw only his back, and believed him to be her husband.'

Amazement filled me as I silently turned this intelligence over in my mind. All was clear now—her truthfulness, which had been her death, most of all!—and the whole plot was so worthy of oriental ingenuity. I fancied—and I believe I was right—that the cook would never have made confession of the manner of his deed but for remorse for the fate into which he had plunged his mistress in attempting to save her. Had she lived, the world would never have seen her innocence established."

'And no word at all—of course there is none!' I said with a groan—'of her? No fragment of her dress, no bit of ribbon—has nothing at all belonging to her been found?'

'Nothing' was the reply, spoken, I fancied, so oddly, that I started.

'The bangles,' Lady O'Reilly went on, without appearing to notice the start I gave—'they are very handsome ones, and I will give them to ayah. Your sister showed them to me.—Now, let us come in to tea; I have a friend with me whom I should like to introduce you to.'

'A friend—a lady?'

'A lady.'

We walked half the length of the garden in silence. At a spot where a clump of shrubs hid the house from us, Lady O'Reilly stopped and looked up in my face. 'I want a promise from you now,' she said gravely—'a promise upon your honour.'

'Surely,' I answered; 'I promise beforehand whatever you ask!'

She paused, still looking me in the face, as if she were taking careful measure of my strength. I began to tremble, with foreknowledge.

'Come back for a minute to the arbour. I was going to venture on a surprise, but it is better not.—Do you imagine *who* is in the house?'

'Lady O'Reilly,' I exclaimed, 'for God's sake, tell me! Has the dead returned to life, that you ask me that question?'

'The dead never return.—Listen for a minute, and I will tell you. I planned and executed Florence Humby's disappearance. You men think one woman cannot help another as *you* would do

it? We can do it better! I carried her to my bungalow, kept her there, and took her thence in the face of all Jullabad—my husband not even knowing it—and behold, sir, she is in England now, and in your very mother's house!

The ayah! I was rushing out of the arbour, when she caught my arm.

'Your promise—your promise!'

'Yes, yes. Tell me what it is?'

'Never—never to reveal to her that you know she nursed you!'

I laughed aloud. Was that all? I heard Lady O'Reilly laugh too, as I left her most unceremoniously. I made straight for the drawing-room. There was no one there. 'Where is she—where is she?' I cried, loud aloud, as I turned to the door to search elsewhere.

A figure seemed to rise out of the floor—or had I been blind when I came in?—a slight girlish figure, draped in black, with a white face, and neck draped in pink. I see her now, and will see her for ever, looking at me with bright and timid eyes, with her little hands clasped in front of her. Oblivious of ceremony, and flinging decorum to the winds, I caught her wildly to my breast. My captive gave a little startled cry, then a flutter or two—and was at rest.

Fickle Fortune having done her worst, seemed humoured to compensate us with generous hand. An old man from over the ocean found his lost lamb again, and gave us wealth which we can never use. He gave us his blessing, too, which was more to us. In that fair garden of England we have taken up our abode, and it is little to say that we are happy. Only, to this day we have never spoken of how Florence got to England. I pretend to take it that she came as others do, and make my pretension good by simply not referring to the matter at all. To this day, also—as I believe will be the case to the end—Florence firmly believes in her innocent heart that I do not know who nursed me on that voyage home from India.

One last word, which will furnish a sufficient key to what would otherwise be inexplicable. One August evening, two months after our marriage, we were sitting at an open window facing the Channel. I was reading aloud passages, here and there, from *Paradise Lost*, and had just read the opening lines of the grand description—

High on a throne of royal state, which far  
Outshone the wealth of Ormuz or of Ind,  
Or where the gorgeous East with richest hand  
Showers on her kings barbaric pearl and gold—

when a sob stopped me, and Florence, bursting into tears, hid her face on my shoulder. It was then that my poor darling told me what I had never questioned her about. Her father, in the excess of his anxiety for her happiness, had brought her up in jealous seclusion from the world, resolved that her wealth should not expose her to the designs of men; so that at eighteen she was still a child. Colonel Humby made her father's acquaintance, and was invited to the house as a man, from age, condition, and looks, with whom it was perfectly safe to trust a child. The trust was betrayed. It was easy even for Humby to fill the imagination of a secluded and innocent girl with glowing pictures

of oriental splendour and luxury and pleasure. He turned her head; and in an infatuated hour—thinking of the East, not of *him*—she forgot her father, and fled with the man. The simulated affection turned to mortal hate when he found himself spurned by her indignant father with the wrathful assurance that he had missed his mark—that he should never share one dollar of the fortune at which he had aimed. The assurance was so given that there was no doubt about it; and in the bitterness of his disappointment, he turned his wife's hopes into Dead Sea fruit.

'My poor, poor darling!' I said, kissing her when she had told me the outline of the story.

'No, no, no, Charlie,' she replied, looking up and laughing. 'Was it not worth going through to—to bring me to the present?'

I looked down in that sweet fair face, and I prayed heaven to grant me virtue to be a worthy custodian of a treasure so rich and pure.

### FUNNY SAYINGS AND ANSWERS BY JUVENILES.

In an article which appeared some time ago in *Chambers's Journal*, and which was entitled 'Unexpected Answers,' the writer asserted that 'no class of men seemed so likely to receive strange and unexpected answers as school inspectors.' This, perhaps, is not quite correct. The inspector only occasionally appears on the scene at school, whilst the teacher is part and parcel of the scene, and always there. The fact is that the comical element amongst youngsters is not nearly so frequently made note of by teachers as it might be, and many Twain-like sayings and laughable answers are thus lost, giving only a temporary diversion and hilarity amid the tedium and monotony of school-work.

Examinations are the times at which our juvenile shooting-stars pop off their unwitting jokes with most frequency. At times, too, the squibs hit the teacher, but only to tickle him, although thoughts may cross his mind that his instructions in geography, Scripture history, or other pedagogy must have been defective, and somehow not lucid to the 'young idea.'

The vicar of a certain parish in Sussex was in the habit of giving religious instruction at the grammar-school of the town. At the close of his series of lessons, he was wont to receive written replies on the subject-matter. On being asked what a 'laver' was, one answer was indited: 'A labourer is a washing-vessel or bason'; the writer thoughtfully concluding, for the credit of his calligraphy, 'George Juniper, forth class, wrote with a sprain thumb.'

A teacher having told his class that 'divers' meant 'various' in the verse beginning, 'But when divers were hardened,' added, that to make the sense complete another word (people) was necessary; whereupon a pupil instantly rose and read out the petrifying paraphrase, with considerable emphasis on the article, 'But when the divers were hardened.'—Asked to place an adjective before the noun 'tree,' an unconscious but grammatical one wrote, 'wooden—wooden tree.'

It is to be supposed that our next youth had heard that the eagle could gaze at the sun without winking. He wrote, however, in a rather

redundant way: 'The Romans never had flags but a eagle on their sticks, it is a noble bird, it looked up at the sun with its eyes open.' Historians make a mistake in calling Christopher Columbus a Genoese—he was an Englishman, for, with the spirit of patriotism burning in him, a boy says: 'The first Englishman who sailed round the world was by name cristerop Com-lumbus.'

The following geographical definitions may be of use to our Fellows of the Royal Geographical Society: 'A cape is a piece of land joining the sea;' and 'a volcano is a burning mounting wich spits fire and lather.' That the earth is round is proved by the fact that the earth goes round the sun!—A little well-brought-up boy wrote: 'Geography tells us about the earth and the sea, countries and rivers and lakes and'—with a devout and extraordinary apostrophe pens the invocation—'*above grace give us knowledge.*'

The under-mentioned lad held up his hand triumphantly whilst several companions gave the correct answer. His twinkling eyes showed he knew, if they didn't. 'How many feet were there in a field where stood a shepherd, his boy, and five sheep?'—'Four' was his eager reply; because the rest, he said, 'weren't feet—they were only trotters.'

A quiet and watery-eyed pupil transcribing, 'These poor savages cannot be called the ancestors of the British people,' was slightly in error when he wrote, 'These poor sausages, &c.—Being asked for examples of animals having coarse hair, one boy thought a Shetland pony. After a pause, another remarked that a pig, too, had coarse hair. But this was completely beaten by another boy, who rose to wind up the subject by stating that 'hedgehogs and porcupines,' he considered, 'had the coarsest and stiffest hair of all.'

A master having propounded the Darwinian theory that such birds as herons, storks, and the like owe their length of leg to the habit, extending over ages, of seeking their food in the water and constantly dragging their feet out of the mud, met a poser from a juvenile anti-Darwinian who requested to know, 'How long will the legs of herons be in a few more ages?'—A boy in the same division was heard shortly afterwards to give a malicious recommendation to another rejoicing in the sobriquet of 'Stumpy' on account of his remarkably short understandings. He recommended 'Stumpy' to 'wear heavy boots.'

In the course of a reading lesson, the word 'sensation' cropped up, and the teacher asked what it meant. Receiving no satisfactory response, he attempted to elicit the answer by saying: 'Come, boys, I'm sure you must know; it's something, for instance, which passes up your arms when you touch a galvanic battery. What is it? Well, my lad, I see you know.'—'Something we feel, sir.'—'Yes, that is very good,' encouraged the questioner; 'but I want the name for it.'—'Please, sir, I know,' came an answer from another part of the class: 'my mother caught one up our Tom's sleeve this morning!'

In examining the boys in the composition of sentences, a master began: 'If I ask you,' said he, 'what have I in my hand? you must not say simply "Chalk," but make a full sentence of it, and say: "You have chalk in your hand." Now I

will proceed. What have I on my feet?' The answer came immediately: 'Boots.'—'Wrong; you haven't been observing my directions,' he rebukingly replied. 'Stockings,' another heedlessly ventured to answer. 'Wrong again—worse than ever,' wrathfully exclaimed the *magister*. 'Well?' he continued interrogatively to a lad near him. 'Please, sir,' then he paused—perhaps he thought it *might* sound funny, but he felt it *must* be right, and so he recklessly gasped it out: 'Corns!'

'What are you talking about there?' demanded a teacher, addressing himself to the loquacious son of a railway porter. But the teacher obtained no response, and was obliged to ask another lad who sat next the delinquent. 'What was George talking about?'—'Please, sir, he was saying as his father's trousers is sent down to Brighton when they gets old, and they's made into *sugar* there, and that's how 'tis sugar's gone down!'

Another Cuvier has arisen. He is very young yet; but the time will come when he will take his proper place as the leading light among animal physiologists. In his essay on the horse he wrote only a bit, but that bit was good—it was concise, and to the point. The examiners showed the paper upon which the dissertation was written to one another, and smiled approvingly at the little author. Young Cuvier had simply touched upon the subject in a geometrico-physico manner:

'*Essay on the Horse.*—The horse is a useful creacher. It eats corn it is a sort of square animal with a leg at each corner and has a head at one end and a tale at the other.'

The examiners forgave the little chap. He looked innocent. They thought his mind had been perhaps wandering—that he had been thinking about his hobby-horse.

The following is a sample of a young historian's acumen: 'In 1839 the English had to stop the advance of Russia in India, and Suraja Dowla was made governor. In 1846 confusion again broke out, but the English government went out and stopped it. This led to the appointment of a Secretary of State. It consisted of fifteen persons.'—Mathematicians will be surprised to learn that 'a circle is a figure contained by a straight line.'—Students of geography may not know that 'the Nile is the only remarkable river in the world. It was discovered by Dr Livingstone, and it rises in Mungo Park.'—Home influences appeared in the answer of a child, whose father was a strong teetotaler, to the query, 'Do you know the meaning of syntax?'—'Yes,' was the ready reply; 'syntax is the dooty upon spirits.'

A lady asked one of the children in her Sunday-school class, 'What was the sin of the Pharisees?' 'Eating camels, ma'am,' was the reply. The little girl had read that the Pharisees 'strained at gnats and swallowed camels.'—'In what condition was the patriarch Job at the end of his life?' questioned a teacher of the stolid-looking boy at the foot of the class. 'Dead,' was the quiet response. 'What is the outward and visible sign in baptism?' asked a lady of her Sunday-school class. There was silence for some seconds, and then a girl broke in triumphantly with, 'The baby, please, ma'am.'—'Do you know, mamma, I don't believe Solomon was so rich after all!' observed a sharp boy to his mother, who prided herself on her orthodoxy. 'My child!' she

exclaimed in pious horror, 'what does the Bible say?'—'That's just it,' he answered. 'It says that "Solomon slept with his fathers." Now, surely, if he had been rich he'd have had a bed to himself.'—A teacher, in trying to explain to her scholars the meaning of repentance, used this illustration: 'Suppose a bad boy were to steal an orange, and his good mother should catch him with it, and take him by the hand gently and tell him how wicked it is, and how very, very grieved she was; don't you think, now, that the little boy ought to feel sorry?' One of the scholars eagerly replied: 'Yes, mum.'—'And why, Marmaduke?'—'Cause.'—'Because why, Marmaduke?'—'Because he hadn't et the orange befo' his ma catch him and tuck it away from him!'

'Did any of you ever see an elephant's skin?'

asked the master of an infant school. 'I have,' shouted a six-year-old at the foot of the class. 'Where?'—'On the elephant, sir.'

### THE MONTH: SCIENCE AND ARTS.

THE recent meeting of the British Association at Manchester conclusively proves, if any proof were needed, that the public take a great and increasing interest in modern developments of science. The attendance of nearly four thousand persons, which is more by five hundred than the number registered at any previous meeting, and the collection of more than four thousand pounds in money, are two facts which speak for themselves. The general Committee, with the help of this satisfactory support, have been enabled to put aside half that sum for purposes of research; for those purposes, indeed, which represent the real work for which the British Association was founded. The recent meeting was no less successful with regard to papers read, and although none of these can be said to deal with any very startling theme, several of them were full of interest. We need hardly say that the social part of the business was carried on with as much enjoyment as is customary. Manchester is a city full of factories of various kinds and businesses of a technical character, and thus the visitors had plenty to see and to study.

It is gratifying, says the *Lancet*, to learn that humanity, to say nothing of good taste, has asserted itself at last among a section at least of the fairer portion of the fashionable world. At a conference of ladies held in Bond Street on the subject of dress, it was decided, a few days ago, that the plumage of small birds should no longer be considered as fashionable trimming for robes or bonnets. Let this decision become accepted by the community in general, and a blot on our civilisation will have been removed.

Messrs Griffiths Brothers, of 9 New Broad Street, London, E.C., call attention to the fire-proofing solution and paint with which the buildings at the Manchester Exhibition have been protected. They claim for these preparations that they will not flake off; that they contain no caustic alkali or chemical calculated to injure the most delicate material; that the paint can be made in any colour; and that it is no more expensive than ordinary oil-paint. If these materials fulfil

all the advantages which are claimed for them, theatrical managers cannot afford to ignore them.

Captain Cook and his voyages in the South Seas belong to the romantic days of a past era, and the name of the brave old mariner is now seldom quoted. But once more he comes before public notice, and in a strange way. An old house in Soho Square, London, in process of demolition, has revealed a certain recess furnished with doors, which had remained hidden and unopened for half a century. In this recess has been found a remarkable collection of articles gathered during Captain Cook's voyages in the South Pacific. The building in which these relics have been found formed part of the Museum of Sir Joseph Banks, who accompanied Captain Cook on his travels. Inside the panelling was found this inscription, in Sir Joseph Banks' handwriting: 'Instruments used, carvings, weapons and heads collected by Captain Cook during the voyage of the *Endeavour*.' Among the relics, perhaps the most remarkable are some old quadrants and other instruments used on board the *Endeavour*; two mummied, tattooed heads of New Zealand chiefs; and a wooden bowl with lips, used, in the dark days of cannibalism, for handing round human blood.

M.D., writing to the *Times*, gives a most useful note of warning to those who at this season of the year return to their town abodes. These houses, he points out, have in most cases been practically uninhabited for weeks. The traps, which when full of water seal the sewers, have probably by evaporation become inoperative; hence the shut-up house gets full of noisome gas, which we may observe does not necessarily betray its presence by a smell. He urges upon the returning inmates the importance of allowing every tap to run for a time, while the windows at the front and back of the house are opened. He has traced many cases of sore throat to the neglect of this sanitary precaution.

An American medical journal gives the following cure for whooping-cough, which is said to be most effectual; it has at anyrate the virtue of simplicity, and, unlike some remedies, it cannot do harm, even if no good results from its adoption. The method consists in fumigating with sulphur the sleeping-room, as well as any other room used by the patient, together with his bedding, clothes, toys, and everything which he uses. The sulphur is simply burned in the apartments, while the clothes are hung up in any convenient manner, and the rooms remain closed, and subjected to the fumes for about five hours. Everything is then well aired, and the rooms are once more ready for the occupation of the sufferer.

According to the *Lancet*, an alkaloid called Stenocarpine has been discovered by a New York doctor, which it is probable may become a formidable rival to cocaine. It is said that if one or two drops of a two per cent. solution of this preparation be communicated to the eye, any operation may be performed on that sensitive organ with complete absence of pain. The anæsthesia caused by the administration of the drug lasts for twenty minutes. This new alkaloid does not seem to have been yet tried in this country; but no doubt we shall soon have reports as to its alleged efficiency.

In a paper read before the recent meeting of the American Association for the Advancement of Science, a curious statement was made, that although the population had increased thirty per cent. in ten years, blindness had increased to the extent of one hundred and forty per cent. in the same period. Why this should be so is not stated. But it is alleged that the United States actually spend about five millions sterling annually in support of the blind.

A new method of collecting gold from its ores has been invented by Mr B. C. Molloy, M.P., under the name of the Hydrogen-Amalgam process. It is well known that particles of gold, such as are found in crushed ore, readily amalgamate with mercury, from which metal the gold is afterwards freed by heat. Under ordinary conditions, the amalgam 'sickens,' as it is called, that is to say, its surface becomes quickly contaminated by certain products of the ore, which coat its surface and prevent its amalgamating action. From this cause only, it has been computed that nearly half of the precious metal found is washed away uncaptured in the form of a fine floating dust. In the new process, the power of electrolysis is called into play. The mercury is placed in a shallow pan about one inch in depth and forty-one and a half in diameter. In the centre of this pan there is a battery cell, so connected with the mercury that hydrogen is constantly given off by that metal, and forms an amalgam upon its surface. This insures absence of that sickening action to which we have already referred. The mercury is kept constantly bright, and the particles of gold are pressed into contact with it by means of a revolving iron disc which floats upon its surface. It is said that by this process every particle of gold is bound to be caught; it cannot possibly escape. The entire machine weighs about five hundred-weight, and will deal with ten tons of ore per day.

Mr Henry Ffennell, who has for many years been endeavouring to preserve an authentic record of the largest salmon caught in the various waters of the United Kingdom, has lately written to protest against unauthorised stories of captures of large fish, which so constantly appear in the various newspapers, but have no foundation in fact. He has made close inquiries into one or two of these tales, and is positive as to their unreliability. For instance, a salmon said to be from the Tay, and weighing eighty-seven and a half pounds, was a short time ago exhibited at a London fishmonger's. This monster has, it seems, now been identified with one weighing thirty pounds less. As a fact, the heaviest fish which has been caught in the river Tay this season scaled sixty-four pounds.

At a recent meeting of the Gas Institute, Mr Livesey is reported to have advised the gas shareholders to be content with smaller dividends, so that the price of gas may be reduced, by which means their business might be much extended and opposition kept away. The advice is well timed, for there are now in the market plenty of well-devised and safe lamps for the burning of cheap mineral oil. Many householders who burn gas because of its convenience in parts of their houses, prefer oil lamps for the living-rooms. Mineral oil gives a brilliant and pleasing light, and at the same time it does not blacken the ceilings. With

such a powerful rival in the field, Gas Companies should take the advice quoted.

Antiquaries and collectors of curiosities generally have always been subject to the operations of ingenious forgers. It is well known that the manufacture of antiques is one which often flourishes, in spite of every endeavour to extinguish the nefarious trade. The latest instance of the kind is reported from Switzerland, where a band of these forgers stand unmasked and their villainy exposed. They devoted their peculiar talents to the reproduction of relics from prehistoric lake dwellings. In one case it was proved that a lacustrine shield had been skilfully made out of a copper plate, the metal having been afterwards steeped in mud for a long period, so as to give it the appearance of venerable age. There is reason to believe that the discovery, some years back, of various specimens of carved and engraved horn, and which pointed to the existence of a 'horn age,' was due to the operations of these ignoble artists. Once more the owners of cabinets will experience a thrill of doubt as to the genuineness of some of their specimens. Let them refrain from too close an examination. In such a case, ignorance is surely more blissful than full knowledge.

It is said that recently several fires have occurred in the chimneys of metropolitan restaurants, although every ordinary care has been taken to keep them free from soot. The cause is traced to particles of grease which are constantly arising from the cooking operations, and which quickly collect to a dangerous extent in the flues.

Attention having been called to the fact that the two Committees of experts appointed by the Department of Science and Art to inquire into the alleged deterioration of water-colour drawings have not yet sent in their Reports, an authoritative statement has been published giving the reasons for the delay. The Committees are engaged in some exhaustive experiments which cannot yet be concluded. In the meantime, every precaution is being taken to preserve the national drawings as far as possible from the action of light and other deleterious influences. The compiler of this statement reasonably asks, whether a drawing will have more exposure to light by the time one hundred thousand persons have seen it on the walls of a picture-gallery, or when each drawing separately has been taken by each of those persons out of a portfolio, a method of preservation which had been suggested.

An electrician in Ohio is said to have invented a new form of speaking-apparatus called a Sea Telephone, which is described as a sort of trumpet with which conversation in an ordinary tone of voice can be carried on between persons separated by three or four miles. The range of the instrument is said to be as much as twenty-six miles; that is to say, the sounds of a train or a whistle can be heard at a distance of thirteen miles in all directions. If we remember rightly, Mr Edison contrived an instrument of this kind, to which he gave the name of Megaphone. But his researches were merely of an experimental kind, and did not lead to any practical result. Perhaps this new inventor may be more fortunate.

At the time when the incandescent system of electric lighting came into vogue, it was

doubted whether the life of the little carbon filament within the glass globe would be long enough for practical purposes. But these doubts have long ago been set at rest. There are many such lamps which have been used in this country which have long outlived the period for which they were guaranteed to last; but they have all been eclipsed by one particular lamp in a newspaper office in Toronto. This lamp has been burning for several hours each night ever since November 1884. It was originally guaranteed to burn for six hundred hours; but its life has already been extended to six times that period.

We have more than once called attention to the circumstance that iron furnace slag, which used to be a waste product, is now being turned to various uses. In Germany, the slag is specially prepared for mending the roads, a material being produced called 'slagstone.' The method adopted is to run the liquid slag direct from the furnace into cast-iron moulds, which slightly taper towards the top. The mould has no bottom, but stands on an iron trolley, so that, when the slag is sufficiently set, it can be released, and the mould is ready to receive a fresh charge. The freshly moulded block is pierced, and its interior contents, still liquid, are allowed to run out. The block is then covered with cinders and allowed to cool gradually. This method insures a hard crystalline stone, which is found useful for purposes of paving.

A new method of preserving milk has been patented in this country. The process consists in placing the liquid in a closed vessel and injecting into it pure oxygen. This process is patented by M. Brin of Paris, one of the same firm, we presume, now established in London for supplying pure oxygen for various purposes.

That energetic body, the Institute of Civil Engineers, invites contributions in the form of original papers upon different subjects. One or two of these we may mention: 'The Application of Liquid Fuel for Steam-boilers and other Purposes'; 'The Distribution of Electricity for Lighting Purposes, and its Application to the Working of Street Tramways'; 'The Utilisation of such Sources of Power as the Tides and the Radiant Heat of the Sun, and some International System of uniformly Lighting the Coasts of the World.' The Council of this Institution has power to award premiums for papers which may meet with their approval.

M. Jovis, whose experimental balloon ascents in Paris were recently adverted to, announces that he intends to make a balloon voyage from New York to Europe some time between the present month and January next. The time of starting will be governed by the state of the wind, which the adventurous aeronaut hopes to find in the right direction for his purpose. The balloon is to have a capacity of eight thousand five hundred cubic yards, and it is estimated that the voyage will be completed in less than sixty hours!

Although we hear much in the present day of the wonders of photography, it would seem that the rapid gelatine plates do not fulfil all the conditions that photographers require. We judge that this must be the case from the circumstance that a Frenchman offers a prize of one thousand francs (forty pounds sterling) for a process by

which a plate can be prepared which shall combine the advantages of gelatine with those of the old collodion process. The method must be simple, and must be capable of extreme sensitiveness. The competition will remain open until the last day of the year; and intending competitors must be prepared to furnish a full description of the process which they submit, accompanied by proofs of what it will do.

The Lighting Committee of the Glasgow International Exhibition, profiting by the great success achieved by the illuminated fountain at South Kensington, which was shown during recent Exhibitions there, have resolved to construct a fountain of a similar kind, but on a far larger scale. The well-known engineers, Messrs Gallo-way of Manchester, have been intrusted with the erection of this fairy fountain, the base of which is to be one hundred and ninety feet in diameter. One hundred jets of water will rise from this basin, and the electric light for giving them their coloured effects will be worked from a distance of two hundred feet from the fountain. It is estimated that one hundred and fifty horsepower will be necessary for furnishing the required amount of energy to produce the light for this beautiful display.

According to the *Electrician*, a new and quick method of soldering telegraph wires has been invented in Russia. The principal advantage of it lies in the saving of time required for the work, and also in the avoidance of any 'scraping,' which would to some extent reduce the strength of the wire. The process consists of dipping the two ends of the wire—already embraced by binding wire—into a vessel holding a considerable quantity of melted solder, upon the top of which there is sufficient powdered sal-ammoniac to leave a thick layer of liquid salt. The ends of the wire pressed into this vessel are quickly joined, however dirty they may be.

It is not generally known that the inflammable vapour of benzene can be ignited by means of friction. A case has occurred in Philadelphia which shows in a curious manner how an accident happened by this means. A boy was cleaning a printing-press with benzene, rubbing in the volatile liquid with a rag, when the vapour suddenly caught fire, and the poor boy was severely burnt. Another fact not generally known is that benzene can be ignited by a copper soldering tool at less than red-heat, for a case of accident has been recorded where a workman soldering a leak in a tin can holding this dangerous liquid, noticed that the application of the tool caused an immediate flame around the opening which he was about to seal. These two examples are quoted in a recent American publication.

There is now to be seen running on the pleasant waters of the Upper Thames a launch of novel construction. Apparently it is a steam-launch, for it has the outward appearance of one; but in reality it owes its motive-power to the explosive vapour of some hydrocarbon such as petroleum. It is indeed a petroleum engine applied, for the first time in this country, to the purpose indicated. No boiler is required, and therefore much space is saved. The boat is set in motion by the act of lighting a lamp, which lamp must be extinguished when it is desired to stop the engine.

The tank holds sufficient liquid for sixty hours' consumption at a cost of about one sovereign. This is clearly much cheaper than the quantity of coal required to do the same amount of work would be. There is also a great saving of labour, for no stoking is required, and a working engineer is hardly necessary. This new boat may possibly be the pioneer of a system which will drive the steam pleasure-launch from the Thames. We understand that it is of American origin.

#### THE GREAT VINE OF KINNELL.

The Black Hamburg vine of Kinnell, a former seat of the Macnabs, near Killin, at the western end of Loch Tay, in Perthshire, is one of the great sights of the Breadalbane country. It is now the largest specimen of a growing vine in the United Kingdom. The Marquis of Breadalbane, on whose grounds of Auchmore it is situated, is justly proud of this splendid vine, and has arranged that it may be seen by the public every Wednesday between the hours of ten and two o'clock. When we saw it this autumn, about five hundred bunches of luscious grapes were hanging from it, which, at an average of two pounds per bunch, means about half a ton of grapes. The yield of this prolific vine in recent years is interesting. In 1879 the yield was 1179 bunches; but 376 bunches being taken off green, only 803 were left to come to maturity. In 1880 the yield was 1274 bunches, 560 taken off, and 714 left to mature. In 1883 the yield was 2102 bunches; in 1884, 2172; in 1885, 2844; in 1886, 2868; and in the present year it yielded 2548 bunches, 500 only being left to mature. It now fills a glass house two hundred and seventy feet long, is growing as rapidly as ever, and is remarkably healthy looking. The stem, a little way above the ground, before it sends out its branches, measures one foot ten inches in circumference. It shoots out for five or six feet before it runs to branches. The only extra 'food' the soil now receives is old bones broken to about half an inch. It is now about fifty-six years since it was brought as a young and healthy shoot to Kinnell. It may be mentioned that the famous Black Hamburg vine at Hampton Court is less in size than this Kinnell vine, the leading branches, according to a recent authority, being about 110 feet long; but its principal stem is 38 inches in circumference.

The story of the vine as told by the oldest inhabitant is briefly this: There happened to be an English shooting-tenant in one of the Macnab residences called Auchlyne, in Glendochart. He was fond of sport, but at the same time had paid so much attention to horticulture as to organise a glass house in the garden, in which this shoot of the Black Hamburg vine brought from the south was planted. This sporting tenant having suddenly gone abroad, the healthy shoot was removed to Kinnell, near Killin, and planted there. It took root and flourished fairly well. A genius of a gardener, Robertson by name, now took means to aid its growth. He had a substantial subsoil of leaf-mould brought from near Finlarig, the burial-place of the Breadalbane Campbells, on the shores of Loch Tay. This soil he prepared in the usual way for use, and with his best gardening skill and experience,

the roots were sunk in this compost. The first year after this treatment, the results did not appear very satisfactory; a few scraggy grapes were the total yield. But immediately afterwards it began its remarkable growth and fruit-bearing, until it has attained its present magnificent condition. It is worth adding that the fruit of this vine is not sold or selfishly used in any way; but, with commendable liberality, the Marchioness of Breadalbane sends perhaps a hundred bunches at a time of these luscious grapes to the hospitals and infirmaries of Edinburgh, Glasgow, and Dundee.

#### SHADOWS.

##### I.

SAY, dost thou love me, dear? Those eyes of thine  
Look at me through the shadows gray, that creep  
Into this silent room, and stir the deep  
Of my sad heart with longing, but to mine  
They give no answer. Evermore they shine  
Quietly grave as when in dreams of sleep  
I see thee face to face. Does thy heart leap  
Ever with joy to greet me? Would no sign  
Set all my fears at rest? Dear, couldst thou stand  
Intent on other things when I am there?  
Wouldst thou not hasten forth to clasp my hand,  
If but thou hearest my foot upon the stair?  
I have no place in thy thoughts' shadowland;  
I am not worthy, love, that thou shouldst care!

##### II.

I am not worthy! Yet the sunbeams bright,  
At dawn, fall on the drooping wayside flower,  
And straight it lifts its head to drink the shower  
Of perfect blessing in. Forgot is night,  
With all its cold and darkness, in the light  
That thrills it through with life's strong, wondrous  
power.  
And thus, O my beloved! if thou shouldst dower  
With love my life, that, erst so wan and white  
Beside the world's wide way, should learn to glow  
With colours vivid as the flaming west  
Wore ere the twilight fell. The Past could throw  
No shadow o'er a Present that had rest  
'Neath love-light from thine eyes. So should I grow—  
Not worthy of thee, dear—but ah, how blest!

KATE MELLERESH.

The Conductor of CHAMBERS'S JOURNAL begs to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the Editor, 339 High Street, Edinburgh.
- 2d. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.
- 4th. Offerings of Verse should invariably be accompanied by a stamped and directed envelope.

If the above rules are complied with, the Editor will do his best to insure the safe return of ineligible papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH.

## THE ROMANCE OF THE WOOL-TRADE.

WHAT is wool? 'The covering of the sheep, of course,' replies somebody. Yes; but what *is* it? Let us ask Professor Owen. 'Wool,' he says, 'is a peculiar modification of hair, characterised by fine transverse or oblique lines from two to four thousand in the extent of an inch, indicative of a minutely imbricated scaly surface, when viewed under the microscope, on which and on its curved or twisted form depends its remarkable felting property.' At first sight this definition seems hardly less bewildering than Dr Johnson's famous definition of network: 'Anything reticulated or decussated with interstices between the intersections at equal distances.' But it will bear examination, and is really more tangible than, for instance, Noah Webster's definition of wool: 'That soft curled or crisped species of hair which grows on sheep and some other animals, and which in fineness sometimes approaches to fur.' It is usually that which grows on sheep, however, that we know as wool, and the number of imbrications, serratures, or notches indicates the quality of the fibre. Thus, in the wool of the Leicester sheep there are 1850—in Spanish merino, 2400—in Saxon merino, 2700, to an inch, and the fewer there are, the nearer does wool approach to hair.

Here is a still more minute description by Youatt, a great authority on wool: 'It consists of a central stem or stalk, probably hollow, or at least porous, and possessing a semi-transparency, found in the fibre of hair. From this central stalk there springs, at different distances in different breeds of sheep, a circlet of leaf-shaped projections. In the finer species of wool these circles seemed at first to be composed of one indicated or serrated ring; but when the eye was accustomed to them, this ring was resolvable into leaves or scales. In the larger kinds the ring was at once resolvable into these scales or leaves, varying in number, shape, and size, and projecting at different angles from the stalk, and in the direction of the leaves of vegetables—that is, from the

root to the point. They give to the wool the power of felting.'

This is the estimate of the chemical composition of good wool: Carbon, 50·65; hydrogen, 7·03; nitrogen, 17·71; oxygen and sulphur, 24·61. Out of a hundred parts, ninety-eight would be organic, and two would be ash, consisting of oxide of iron, sulphate of lime, phosphate of lime, and magnesia. What is called the 'yolk' of wool is a compound of oil, lime, and potash. It makes the pile soft and pliable, and is less apparent on English sheep than on those of warmer countries, the merino sheep having the most 'yolk.'

The fibre of wool varies in diameter, the Saxon merino measuring  $\frac{1}{12500}$  of an inch, and the South-down,  $\frac{1}{10000}$ . Lustrous wool, it is said, should be long and strong; but if it is very fine, it is not long. Strong wool may be as much as twenty inches in length. The wool of the best sheep adheres closely, and can only be removed by shearing; but there are varieties of sheep which shed their wool, as, for instance, the Persian, which drop the whole of their fleeces between January and May, when feeding on the new grass.

This, then, is wool, the first use of which for cloth-making is lost in antiquity. There is no doubt that the pastoral industry is the oldest industry in the world; for even when the fruits of the earth could be eaten without tillage and without labour, the flocks and herds required care and attention. The shepherd may be regarded as the earliest pioneer of industry, as he has been for centuries the centre of fanciful romance, and the personification of far from romantic fact. The old legend of Jason and the Golden Fleece is in itself evidence of the antiquity of the knowledge of the value of wool, and much as the mythologists make out of the legend, there are some who hold that it merely is meant to record how the Greeks imported a superior kind of sheep from the Caucasus and made money thereby.

Australia is now the land of the Golden Fleece, and millions of money have been made there out of the docile sheep. It is not indigenous, of course, to the land of the Southern Cross, where

the only mammal known when Europeans discovered it was the kangaroo. Mr James Bonwick, a gentleman well known in Australian literature, has lately gathered together many records of the introduction of the sheep into Australia, and of the marvellous development of the pastoral industry there. We shall avail ourselves of the information collected by Mr Bonwick, in his very interesting book, *The Romance of the Wool-trade* (London: Griffith, Farran, &c., 1887).

But, first, as to the different kinds of sheep. The Bighorn is the wild-sheep of Kamschatka, of which we lately gave some notes; and it may be taken for granted that all species of the domestic sheep were at one time wild, or are descended from wild tribes. When the Aryan Hindus invaded India, it is recorded that they took their flocks with them; but whether the wild-sheep still to be found on the hills of Northern India are the descendants of wanderers from these flocks, or descendants of the progenitors of them, we do not pretend to say.

Chief among the domesticated sheep of the British Isles is the Southdown, whose characteristics used to be—although we are told they are changed somewhat now—thin chine, low fore-end, and rising backbone, a small hornless head, speckled face, thin lips, woolled ears, and bright eyes. The wool should 'be short, close, curled, fine, and free from spiry projecting fibres.' Then there are the Romney Marsh, the Cotswold, the Lincoln, the Leicester, and the Hardwick sheep, each with its distinctive marks and value. The Welsh sheep have long necks, high shoulders, narrow breasts, long bushy tails, and small bones; the wool is not first-class, but the mutton is excellent. The Irish native sheep are of two kinds, the short-woolled and long-woolled; but Southdowns and Leicesters have been so long crossed with them, that their idiosyncrasies are no longer marked. The Shetland sheep are supposed to have come from Denmark, but have also been crossed with English and Scotch varieties. In Scotland, the Cheviot and the Blackfaced are the two ruling types. The Cheviot is a very handsome animal, with long body, white face, small projecting eyes, and well-formed legs. The wool is excellent, as the 'tweed'-makers of the Border know, but is not so soft as that of the English Southdowns. The Blackfaced is the familiar form we see in the Highlands, supposed to have come originally 'from abroad,' but now regarded as the native sheep of Scotland. It is a hardy animal, accustomed to rough food and rough weather, with a fine deep chest, broad back, slender legs, attractive face, and picturesque horns. The wool is not so good as that of the Cheviot variety, but the mutton is better. Of course, English varieties have been largely crossed with the two native Scotch kinds; yet these still remain distinct, and are easily recognisable.

As long ago as the time of the Emperor Constantine, the wool of English sheep had a high reputation, and had even then found its way to Rome. Of English monarchs, Edward III. seems to have been the first to endeavour to stimulate the pastoral industry by the manufacture of woollen cloths and the export of raw wool. But Henry VIII. thought that sheep-breeding had been carried too far, and the farmers were making too

much money out of it; so he decreed that no one should keep more than two thousand four hundred sheep at one time, and that no man should be allowed to occupy more than two farms. In the time of Charles II. the export of both sheep and wool was strictly prohibited. As late as 1788, there were curious prohibitory enactments with reference to sheep; and the date is interesting, because it was the date of the settlement of New South Wales. There was a fine of three pounds upon the carrying off of any sheep from the British Isles, except for use on board ship; and even between the islands and the mainland of Scotland, or across a tidal river, sheep could not be transported without a special permit, and the execution of a bond that the animals were not for exportation. Indeed, no sheep could be shorn within five miles of the sea-coast without the presence of a revenue officer, to see that the law was not evaded.

It is not surprising, then, that the first sheep settled in Australia—the only great pastoral country that has never had a native variety—did not go from England. It is very curious that in Australia, New Zealand, and Tasmania, where now lies a great portion of the pastoral wealth of the world, there never was any animal in the smallest degree resembling a sheep until some enterprising Britons took it there.

The first sheep introduced into Australia were from the Cape and from India. The ships which went out with the convicts of 1788 had a few sheep on board for the officers' mess, which were presumably consumed before the Cape of Good Hope was reached. There some animals were procured for the new settlement. The Cape at the time was in the hands of the Dutch, who had large flocks of sheep and immense herds of cattle. The sheep they had were not imported from Europe, but were the native breed they had found in the hands of the aborigines when the Dutch colony was founded one hundred and thirty years previously.

The native African sheep is of the fat-tail kind. Wool was not then an item of wealth in the Dutch colony; but the fat tails were appreciated as an excellent substitute for butter. All over Africa and over a large part of Asia, varieties of the fat-tail species are still to be found. In Tibet they abound; and the Turcomans have vast flocks of them. But Tibet has also other varieties, and notably one very like the llama of Peru, with a very soft and most useful fleece, providing the famous Tibetan wool. In Palestine and Syria the fat-tail sheep is abundant; and of the Palestine breed it is recorded that they 'have a monstrous round of fat, like a cushion, in place of the tail, which sometimes weighs thirty or forty pounds. The wool of this sheep is coarse, much tangled, and felted, and mixed with coarse dark-coloured hair.

Although the first sheep taken to Australia were from the Cape, the most important of the earlier consignments were from India, the nearest British possession to the new colony. Indeed, for over thirty years Australia was ecclesiastically within the see of the Bishop of Calcutta, and letters to England usually went by way of the Indian capital.

The Bengalee sheep are described as 'small, lank, and thin, and the colour of three-fourths

of each flock is black or dark gray. The quality of the fleece is worse than the colour; it is harsh, thin, and wiry to a very remarkable degree, and ordinarily weighs but half a pound.' Not a very promising subject, one would think, for the Australian pastures, but the flesh was excellent; and climate and crossing of breeds work wonders.

That which gave value to the Australian breed of sheep, however, was the introduction of the Spanish merino, which in time found its way to the Cape, and thence to Australia. There is an old tradition that the famous merino sheep of Spain came originally from England; but it appears from Pliny and others that Spain had a reputation for fine wool long before the Roman occupation. The word merino is supposed by some to be derived from *Imri*, the fabled flock of Palestine; and by others from *marino*, or ultramarine, from the tradition of their having been brought by sea. Some writers believe that the merino came originally from Barbary, probably among the flocks of the Moors when they captured Southern Spain. The merinos were considered very voracious, and not very prolific; they yield but little milk, and are very subject to cutaneous diseases. Youatt describes two varieties of them in Spain, and the wool is of remarkable fineness.

About the year 1790, the Spanish merino began to be imported into the Cape, and a few years later a certain Captain Waterhouse was sent from Sydney to Capetown to buy stock for the colonial establishment. He thought the service in which he was engaged 'almost a disgrace to an officer;' but when he left the Cape again, he brought with him 'forty-nine head of black-cattle, three mares, and one hundred and seven sheep'—arriving at Port Jackson with the loss of nine of the cattle and about one-third of the sheep. Three cows, two mares, and twenty-four of the sheep belonged to that officer, and with this voyage he founded not only his own fortune, but also the prosperity of the great Australian colony. Further importations followed; and a Captain Macarthur, early in the present century, went home to London to endeavour to form a Company to carry on sheep-rearing on an extensive scale. He did not succeed, and returned to Port Jackson to pursue his enterprise himself. Eventually, he obtained the concession of a few square miles of land, and thus became the father of Australian 'squattling.' He located himself on the Nepean River, to the south-west of Sydney; and to his industry and sagacity is attributed in great part the origin of the immense wool-trade which has developed between the colony and the mother-country.

And what is now the wool-wealth of Australasia? In 1820 there were not more than ten thousand sheep of 'a good sort' in New South Wales; and in the same year, wool from the colony was sold in London at an average of three shillings and sevenpence the pound. This led to the circulation of fabulous reports of the profits to be made out of sheep; and there was quite a run for some years on squatting lots. In 1848 some Australians started sheep-running in New Zealand; and by 1860 the sheep in these islands had increased to 2,400,000. In 1865, the number there had grown to 5,700,000; in 1870, to 9,500,000; and in 1877, to 14,300,000.

In 1886 the pastoral wealth of the whole of the Australasian colonies stood thus:

Colony.	Number of Sheep.
New South Wales.....	37,820,906
New Zealand.....	16,677,455
Victoria.....	10,681,837
Queensland.....	8,994,322
South Australia.....	6,696,406
Western Australia.....	1,702,719
Tasmania.....	1,648,627
Total.....	84,222,272

At only ten shillings per head, this represents a capital of over forty-two millions sterling, without counting the value of the land.

But now as to the yield of the flocks. Our latest complete figures are for 1884, and are as follows:

Colony.	Pounds of Wool.	Value.
New South Wales.....	171,612,279	£8,895,543
New Zealand.....	82,138,718	3,342,509
Victoria.....	61,369,000	3,878,620
South Australia.....	47,296,784	1,823,431
Queensland.....	35,525,977	1,889,504
Tasmania.....	8,215,101	453,567
Western Australia.....	4,272,948	249,255
Total.....	410,430,807	£20,532,429

The London prices of 'Australian greasy wool' have thus varied: In 1850, 11d. per pound; in 1858, 9½d.; in 1860, 1s. 2d.; in 1869, 1s. 6½d.; in 1871, 7½d.; in 1872, 1s.; in 1884, 11d. In 1884 the price of Lincoln wool in the same market was 10d. per pound.

The total importations of wool into England in 1885-86 were 1,819,182 bales, of which no fewer than 1,139,842 bales, or nearly three-fourths of the whole, came from Australasia. The rest came from the Cape and Natal, 227,289 bales; India, 101,770; the Mediterranean, 79,433; Russia, 65,027; other European countries, 47,655; China, 2393; and the Falkland Islands, 6614 bales.

It would transcend the limits of this article to attempt to sketch the history and growth of the woollen industry in the manufacture of cloths. It is an industry, if not as old as the hills, at least very nearly as old as the fig-leaves of Eden; for we may assume as a certainty that the next garments worn by our forefathers were constructed in some way from the fleecy coats of these bleating followers.

In the middle ages, all the best wool was produced in England, and the woollen manufacture centred in Norfolk, although both the west of England and Ireland had also factories. There are in existence specimens of cloth made in these medieval days which show that the quality of the wool employed was not equal to that which we now use. The art of weaving is supposed to have been brought from the Netherlands; at anyrate there were strong political alliances between the English sovereigns and the weavers of Bruges and of Ghent. In these old days, when Norwich, Aylsham, and Lynn had the lion's share of the woollen trade, the great mart for English and foreign cloths was at Stourbridge, near Cambridge, where a fair was held which lasted a month every year.

How the woollen trade has extended to Yorkshire and Scotland it would take too long to tell. But a word may be added of a quite new development of it at the antipodes. The Aus-

traliains are not going to be content with growing the wool; they are also manufacturing it into cloth, turning out some millions of yards of woollen cloth per annum. What is to be the result? Will our colonial children take away from us the industry which we have monopolised for centuries? It may be so, and our consolation is, that it will be our own children who are succeeding to the inheritance.

RICHARD CABLE,  
THE LIGHTSHIPMAN.

BY THE AUTHOR OF 'MEHALAH,' 'JOHN HERRING,'  
'COURT ROYAL,' ETC.

CHAPTER L.—BOOTS AGAIN.

NEXT morning, Josephine found a cab awaiting her. Cable had paid her bill and sent the conveyance for her. He had given instructions to the driver to convey her along the Okehampton and Launceston road beyond the town to a point where, at the head of the first hill, stood a fragment of an old stone cross. She had fancied that he would have come with his van of calves into the cathedral yard, drawn up before the *Clarendon Hotel*, and had her box laden on the van there; but Richard Cable had too much delicacy under his roughness of manner to subject her to such a humiliation; she was to leave the *Clarendon* as she had come to it, in a hired conveyance, and as a lady; only when beyond the town would he receive her box and her on his van.

She reached the cross before him, and dismounted. When she opened her purse, the driver objected—he had already received his fare; the man who had ordered him had paid. Josephine had her box placed by the side of the road. A little inn stood near the cross, and the landlady good-naturedly asked her to step in—if she were waiting for the coach. 'No charge, miss; you needn't take anything.'

'Thank you,' said Josephine modestly; 'you are very kind; but I am not going by the coach. A gentleman—I mean a man who drives a van of calves, is going to pick me up.'

'Oh, you mean Dicky Cable. He often goes by our way.'

'Yes; I am going on with Mr Cable.' As she spoke, she saw the cob, and Cable limping at its side, ascending the red road cut between banks of red sandstone hung with ferns and overarched with rich limes.

'He looks very greatly changed,' said Josephine to herself—'oldened, hardened, and somewhat lame.'

Presently he came up. Rain had fallen in the night, and the red mud was splashed about his boots and the wheels of the van. The calves within put their noses between the bars and lowed; they were frightened by the motion of the vehicle; but they were not hungry, for they had been fed by Cable before starting. He scarcely said good-morning to Josephine; it was mumbled, but he touched his hat to her. Then he should-

ered her travelling-box and put it on the top of the van. This van consisted of a sort of pen or cage on wheels; the sides and top were constructed like a cage, with bars of wood, and between the bars the air got to the calves, and the calves were visible. There was a seat in front, and the door into the pen was behind—it let down so as to form an inclined plane, up and down which the calves could walk, when driven into or out of the cage.

How was Josephine to be accommodated in such a contrivance? Was she to go into the cage among the calves, or to be slung under the conveyance between the wheels, or to be perched on the top, as in an omnibus? Richard pointed with his whip to the driver's seat.

'Am I to sit there?' she asked.—He nodded.

'Then where do you sit?'

He got upon the shaft, as a carter perches himself.

'I do not like to take your place,' said Josephine. 'You will be very uncomfortable there.'

'It is not the first time you have made me uncomfortable. Sit where I have put you. I must be off every few minutes when we come to a hill; then I walk.'

That was—he limped. His thigh was well, but he never could walk with it as formerly. It gave him no pain, and his movements were not ungainly, but there was a decided limp as he walked.

He was not in a mood for conversation. Josephine could touch him as he sat at her feet on the shaft with his back to her. He did not once look round; he went about his work, driving, walking, attending to the calves, as if he were quite alone. Nevertheless, he must have thought of her, for when he came to a piece of road newly stoned, he went leisurely, and glanced furtively behind—not at her face—to see that the jolting did not hurt her; and when a shower came on, without a word he threw his waterproof coat over her knees. Presently they came to a long ascent. He got down and walked. She also descended and walked on the other side from him. She wondered whether his silence would continue the whole way, whether he would relax his sternness.

The journey was tedious; the cob travelled slowly, and the stoppages were long, whilst farmers haggled with Richard over the price of the calves. The sale of these latter did not, however, begin till the road left the red sandstone and approached Dartmoor. The yeomen and farmers in proximity to the moor were a thriving race; they could send any number of young cattle to run on the moor at a nominal fee to the 'Moor-men'—that is, to certain fellows who had the privilege to guard the vast waste of rock and down, of mountain and valley, under the Prince of Wales as Duke of Cornwall; for Dartmoor forest is duchy property though situated in Devon, and indeed occupying its heart. To the present day, it is about the borders of the moor that the old yeoman is still to be found, occupying in many cases his ancestral farm, the buildings of which date back three or four hundred years.

They consist of a large quadrangle; one side is occupied by the dwelling-house, that looks into the yard, but is divided from it by a small raised garden. The major portion of the yard or court is a pen for the half-wild cattle driven in from the moor; and about it are the stables and cow-houses, the 'shippen,' and the 'linneys'—the 'shippen' for sheep, and the 'linneys' for wagons and carts and the farmer's gig.

The worst seasons do not affect the yeomen round the moor; they must thrive, when they have free run for any number of sheep and cattle and horses over the downs, where the grass is always sweet, the water pure, and where disease never makes its appearance. All they have to concern themselves about is a supply of winter-food for the stock. Elsewhere, the depression in agriculture, the repeal of the corn-laws, killed off the yeomen; only on the moor-fringes do they thrive to this day as sturdy, as well-to-do, and as independent, and, it must be added, as delighting in law as of old. Dartmoor lay on the south and east, and the cold clay land of North Devon on the west; land also, as already said, that is excellent running and rearing ground for young cattle. Consequently, Richard Cable, as soon as he reached the frontiers of these two poor lands—one peat, and the other clay—found buyers, but not buyers who were ready to part with their money without a haggle over coppers.

It was not Richard who went after the farmers with his goods, as a chapman goes about among farmhouses with his wares; but the yeomen and farmers came to him. But when they came, they made poor pretences that they had chanced on him when bound elsewhere, or were at the tavern for some other purpose. The times of Richard's arrival were pretty well known. The van travelled slower than the news, as the thunder rolls after the flash. The men who came after calves were all alike in this—they had very red faces, and all filled their clothes to overflow. They had all loud and cheery voices, and a breezy good-humour not unmixed with bluster, bred of the consciousness that their pockets were well lined, and that they were petty lords on their own domains. In one thing, they, moreover, were all deficient—in the knowledge of the value of time. Josephine looked on with wonder at the business Richard did and at the way in which it was done. The scenery was lovely, so lovely that she enjoyed it in spite of the trouble in which she was. The ranges of tors, or granite peaks of the moor, its wildness and barrenness, contrasted with the richness of the country at its feet; now clothed in the many-tinted garment of autumn, gray desolation towering above pillowy woods of gold and amber, of copper and of green. What could be more beautiful? In her present weariness of expectation and disappointment, she longed to fly to the recesses of the moor, build herself a cell there of lichened granite stones, and there spend the rest of her days away from the sight and sounds of men.

At noon on the first day, the van halted at a small wayside inn, and Richard ordered dinner. 'There is but ham and eggs,' he said. 'Your ladyship must put up with that to-day. The ale is bad, but you shall have tolerable ginger beer.'

The night was spent at an old coaching inn, a large rambling place with vast stables. There she was treated to an excellent supper and to the best of rooms; but Richard did not sup with her, or indeed see her after their arrival at the inn.

Next morning he paid the account, and they started on their further course. Her boots had been well cleaned; not so those of Cable, which still bore the red mud splashes that had come on them when they were in the sandstone district.

It was now clear to Josephine that Richard would not agree to a reconciliation; she must abandon the hopes she had entertained that he would unbend and yield. She also had made up her mind; and when they came to a hill, up which both walked, she went to him on his side of the horse. 'Mr Cable,' she said, 'you are at once kind and cruel. You provide for me very differently than for yourself, and make provision that I shall lack no comfort; but you do not give me a good word, and not a look good or bad.'

'Well,' said he, 'of whom have I learned to be cruel? You were scornful and offensive because I did not in a few weeks acquire your ways; and now I am better, I have learned something—that you have taught me—to be unfeeling and seek my own self-interest.'

'No; I was never either one or the other.'

He laughed contemptuously. 'Not unfeeling!'

'No—Richard, I mean Mr Cable—I was thoughtless, but not unfeeling. I was not self-seeking, or I would not have married you.'

'You married me, to suit a whim, and when you had me, the whim came to slap me in the face and sneer at my manners.'

She drew a long sigh; there was truth in this, and she did not contradict it.

'But we will not cry over spilt milk and strive to patch up broken eggs. The thing is done and sealed up and stowed away in the lockers of the past.'

'Tell me this, Richard: are you so set against me in your own mind that you will not take me to your side again? Are we never to come nearer each other than as I sit on the box, and you on the shaft, with your back turned to me? Is your face always to look away from me?'

'For ever and for ever. It is your doing.'

'I have trespassed against you, I know; but, I suppose, to all who trespass, forgiveness is due when sought with tears.'

'No,' he said; 'your trespass was too deep.'

'And I am to be for ever separated from you?'

'For ever.'

'Then—Mr Cable, if I am not to be regarded as a wife, I will owe you nothing. I have money, and I will pay for my lodging and food at the inns. I will not be indebted to you for anything.—What had you determined on for me at St Kerian?'

'I also have money; I will not let you want. You shall have all you need to live like a lady; you shall have a house and a servant; and you shall have half of all the money I earn, and I earn now a great deal.'

'I will not touch it—no, not a penny of it.'

'You are proud,' he said, scowling—'proud and wilful; headstrong always.'

'And you are proud, Mr Cable. There is the fortune of Cousin Gabriel Gotham—your father, lying untouched; the rents and dividends are accumulating. You will not have them, and I will not. Yes, you are proud, and I am proud also. I have some spirit left in me, though much is gone. I will live at St Kerian, as that is your wish; but I will not share your money—I will not touch any of it. I will work for my own bread, and not eat that of charity. I have a little money. Good Miss Otterbourne forced a five-pound note on me, and I have saved my wages. I will buy myself a sewing-machine, and live at St Kerian by my own hands and feet. I suppose there is sufficient vanity among the girls there to make them desire to dress beyond their station; and that the government schools have done their work effectually in giving them a distaste for doing their own needlework. So there will be an opportunity for me to pick up a livelihood, and to be indebted to none—to you least of all.'

'Proud,' he muttered—'proud and wayward, as of old. I feed my calves. Why should not I feed you?'

'Because I am not a calf.'

They walked on in silence some way. Josephine's blood was roused. After reaching the top of the hill, before mounting, she said in a less excited and resolute tone: 'Do not call me wrong-headed. I have my self-respect to sustain, and I cannot live on your charity if I may not bear your name.'

Again they drove on some little way—now over a down that commanded a glorious view of rolling land stretching far away to the west and north-west, and of rugged granite peaks, their sides strewn with overturned rocks, divided from each other by clefts, out of which rushed brawling torrents, coffee-coloured with the dye of the peat-bogs out of which they sprang.

When they came to another rise, Josephine dismounted again and walked up the hill beside her husband. The hill was steep, and she walked bent forward, looking at the ground. 'Mr Cable,' she said, 'at the inn where we spent the night, my boots were cleaned, but not yours.'

'No,' he answered, with a short laugh. 'I was not there as a grand gentleman traveller, but as a plain trading wayfarer. They don't black the boots of such as me.'

'They are plastered with mud of many colours.'

'Does it offend you that your driver has dirty boots, my lady?'

'No, Mr Cable; but I think it would be pleasant for yourself, if your boots were cleaned.'

'My boots! I remember what offence they gave you once. They would not take a polish. They were so steeped in oil that they might not come into your ladyship's boondoir! Are you sneering at my boots again?'

'No, Richard; I never sneer now.' She put her delicate hand over her brow and wiped it, and then got up into her place again.

Presently they came to a spring that gushed into a granite trough—a spring of such crystalline brightness, that looking down through the water was like looking through a magnifying glass. There was a button at the bottom of the trough, and one could distinguish the four holes in it.

'This water is very good and fresh; shall I give you some?' asked Richard Cable.

'No,' answered Josephine. 'I will take nothing from you, not even a cup of cold water. I will help myself. I will take nothing till it is offered in love.'

He looked hastily at her, and saw that her eyes were full of tears. He trembled, and lashed his horse savagely, and uttered something much like an oath. He was angry with the cob—it was going to sleep over its journey; and a horse that goes to sleep whilst walking is liable to fall and cut its knees. Richard Cable detected, or fancied he detected, somnolency in the horse, and he worried it with whip and jerk of rein till he had roused it to full activity and a trot, whereat all the calves began to low and plead not to be so severely shaken; but Cable had no compassion on the calves; he lashed into the horse, and made it run along as it had not run that day or last.

'It is all pride and wilfulness,' he said to himself.

From sitting on the shaft with his legs hanging down, they were much splashed with mud by the horse, as it went through every wet and dirty place in the road; this was especially the case when it was trotting; and Richard, looking down at his boots, saw them caked with mud, layer on layer, or clot on clot; below was the red, then the white mud of the pounded granite, then the brown of loamy land, then black from peat-water, where the road traversed the down.

'They are a bit unsightly,' he said to himself. 'And when I come to Sticklepath, where I put up for the night, I'll mind and have them dried over the fire in the kitchen; and I'll clean them myself in the morning. She's right—one ought to keep one's-self respectable.'

When they reached the place called Sticklepath, a hamlet with an inn, and a chapel whitewashed and thatched with straw, and looking like a cottage, he ordered supper, and then went after his cob, to rub it down with straw. He was careful of his beast, and always attended to his comforts and necessities himself. Then he got milk for the calves; but when he came out into the yard, he found Josephine there with a pan of skimmed milk, dipping in her hand and holding it to the hungry creatures, who opened their pink wet mouths and mumbled her hand till they had sucked off it all the milk.

'How proud she is!' muttered Cable. 'She does this out of wickedness—to pay me for having given her a lift in my van. She will owe me nothing.'

Before he went to bed, he took his boots to the kitchen and asked that they might be put where, they would dry before morning, when he would brush them over himself. He slept soundly that night; and on waking, dressed himself, brushed the mud off the bottoms of his trousers, and then descended in his stocking-soles in quest of his boots. As he came down the back-stairs, he could look into and across the kitchen, and he saw behind it, in the back-shed that served the purpose of boothole and back kitchen, the figure of Josephine. She stood near the door, with the fresh morning light streaming in on her, and white pigeons flying about outside, and perching near the

door, expecting the morning largess of crumbs. She had her sleeves turned back, exposing her beautiful arms, and—she was blackening his boots.

## SOME HINTS TO AMATEUR ACTORS.

### MAKING-UP.

WHAT amateur actor thoroughly understands the art of making-up? There are many who think they do, but who generally succeed in producing a different impression upon their audience; and when a performance is given under professional superintendence, the wise course is usually followed of hiring an artist from the perruquier to perform the necessary transformations. Professional actors dispense, as a rule, with the services of any such auxiliary, and there seems to be no reason why amateurs should not do the same. All that is needed for the purpose of changing one's appearance is a little knowledge and a little imagination. The knowledge extends to what colours must be used in making-up the face for different characters; and the imagination should teach how those colours should be applied in order to produce the desired effect at the proper distance.

In the first place, we have to remember that the actor is to be seen in an artificial light, where, except in burlesque or pantomime, he wishes his face to present a natural appearance. In order to judge of the effect he is to produce, it is therefore necessary that he should make-up by the same light as that in which he is to perform. To make-up by candle-light for a gaslight performance would be a great mistake; for there is probably as much difference between the colours of these two lights as there is between that of gaslight and of the light produced by electricity. Colours which look perfectly natural by gaslight, appear, when seen by daylight, to be hideously overburdened with yellow. The fact is that all artificial lights possess the power of 'killing' yellow, some in a greater and some in a less degree; so that we must always remember to add a certain proportion of yellow to any pigments whose effect by daylight we desire to reproduce upon the stage. A person ignorant of this will struggle ineffectually to impart freshness to the colour of his complexion by the aid of white alone, and only succeed in producing what professional critics contemptuously characterise as a 'dirty make-up.' This property which gaslight possesses of 'killing' yellow probably furnishes the reason why a clear and healthy complexion looks muddy and haggard if exhibited in the full glare of the footlights. It explains, in fact, the necessity for making-up, even when the actor does not wish to alter the character of his face.

Before making-up, the actor should dress for his part and put on his wig, if he has to wear one. These preparations will enable him to judge of the effect he is producing far better than if they were postponed until the completion of the make-up. The face should previously be washed in order to remove any perspiration which would prevent the colours from adhering smoothly to the skin. It is first necessary to powder the face and neck to the required tint for the general complexion. This should be done with

violet powder or pearl powder with which a little powdered chrome has been mixed—how much, the judgment must decide—with a little red. If the character is a youthful one and the complexion clear and delicate, vermillion in the powdered form is the proper red to use. For sunburnt soldiers or dark-skinned foreigners, Armenian bole (a dark reddish brown) is to be preferred. Combinations of these two reds in suitable proportions with yellow and white will give all the varieties of complexion likely to be wanted.

The next step is to rouge the cheeks. This should be done with vermillion applied by means of a hare's foot. If the complexion is dark brown, vermillion will still be necessary if any warmth of colour is to be imparted to the cheeks, as the addition of more Armenian bole will only make the complexion dull and heavy. The red should be applied close up to the eyes—higher up than it appears in nature—the effect of the strong contrast of colours being to give the eyes a more brilliant appearance. A little red should also be applied under the eyebrows, to counteract the cavernous appearance caused by the shadows thrown upwards by the footlights; but the eyelids should not be reddened unless an expression of grief or age is desired. The marking of the eyebrows is frequently overdone by amateurs, who over-estimate the effect of distance in toning down strong lines. An eyebrow pencil, which should be dark brown or black, may be used either to increase the length or the thickness of the natural eyebrows. By increasing their thickness we give a sterner and more masculine expression to the face; but their natural length should not be increased unless it is conspicuously deficient. The expression of the eyes is greatly assisted by a thin line close under the lower eyelashes. This line should be dark brown or black, but it is only necessary in a theatre or a large hall. At a drawing-room performance it is better omitted. For many parts, also, it is necessary that the nose should be treated so as to bring the face into harmony with the desired characteristics. This requires some skill and care.

If any false hair is to be put upon the face, this should be done before the colouring is completed. False hair is made to adhere by means of liquid 'spirit gum.' The gum should be laid upon the face with a camel-hair brush, and the hair should then be applied and pressed home with a damp towel. The hair is easily pulled off again after the performance; and the remains of the spirit gum may be removed with the aid of a little grease, which will prevent any subsequent soreness of the skin. Most actors prefer vaseline for this purpose; but spermaceti ointment, or even lard, will do equally well; and the writer once used salad oil with a perfectly satisfactory result.

If the actor has a moustache of his own which he wishes to hide, this is a delicate and difficult task to accomplish. The best way is to rub the two sides of the moustache down with a moist cake of soap until the hairs all adhere flatly to the face. If the ends persist in sticking out, they may sometimes be fastened down with a little spirit gum, which must be applied before the soap is laid on. When the gum is dry, the soap should

be passed over it. The use of the soap serves two purposes: it sticks the hair down flat against the face, and it forms an adhesive surface for the powder afterwards to be applied. The operation must be performed before the complexion is made-up, and as much time as possible should be allowed for the soap to dry. Practice alone can make a person an adept at concealing his moustache, and of course some of these ornaments are so thick and bristly that they obstinately refuse to be effaced at all.

The art of 'lining' the face to simulate the wrinkles of age is one very imperfectly understood. Frequently does the amateur performer draw a labyrinthine meshwork of thin dark lines, which only convey the effect of a dirty face when seen upon the stage. The point to decide is rather how few than how many wrinkles to mark upon the face. A few broad touches partaking more of the nature of shadows than of mere lines, will often give an effect which would be destroyed by any attempt at a more minute treatment. The lines should be made with dark red, not black. An ordinary water-colour cake and a small brush are the implements needed. The natural wrinkles of the face will afford the best guide to where the artificial ones are to be painted, although, of course, they must be varied according to the character to be represented. For example, in marking the 'crows'-feet' in the outer corners of the eyes, a jovial expression is given by drawing the lines downwards, and a serious or mournful expression by drawing them upwards. It should further be borne in mind that if the light is strong, the lining will require to be strong in proportion; but in performing by an imperfect light, the lining should be subdued as much as possible.

If a wig with a bald front is to be worn, it must be carefully fixed before the face is made-up. The bald front is joined to the face by the aid of 'wig-paste.' This consists of a pinkish colouring matter combined with wax; consequently, it readily melts with warmth. A little of the paste should be rubbed upon the forehead and also upon the inside of the bald front. The latter should then be fitted to its proper position in front, and the wig should be carefully drawn over the head. No attempt should be made to adjust the bald front after the wig is on, as this will invariably spoil the set of it. When the wig is on, some wig-paste must be rubbed over the joint between the bald front and the forehead. The complexion must, of course, be made up to match the colour upon the bald front, and the latter must be powdered to conceal any glossiness which would mark a distinction between it and the face. If the actor's moustache or whiskers have to be whitened, a moist cake of soap should be passed over them, to enable the powder to adhere to them. We must remember to temper our white with yellow in producing the effect of gray hair, unless we wish to represent a cold bluish gray.

We have described some processes of making-up with the ordinary powders which may be obtained at any chemist's shop. Of late years, 'grease-paints'—which are manufactured in the same manner as wig-paste, only in various colours—have come largely into use. These grease-paints are sold, like wig-paste, in sticks at fivepence or

sixpence apiece. The grease-paint may be applied to the face by first rubbing it in the palm of the hand, where any desired combination of colours can be mixed. Grease-paints are not liable, like powders, to be disturbed by perspiration; and by their use, the process of making-up the face to match the bald front of a wig is greatly facilitated, and they are therefore much in request by actors who play 'old men and character business.' A small stick of dark-red grease-paint cut to a point with a penknife does admirably for lining the face. These paints can be removed from the skin easily, with the aid of grease, but they should not be applied to the hair. We believe the composition of these paints to be no difficult art, and we have heard that an eminent London actor always makes his own grease-paints. As regards what can be purchased ready made, we prefer the sticks of German manufacture.

## THE OLD WAY AND THE NEW.

A STORY IN NINE CHAPTERS.

By T. W. SPEIGHT.

### CHAPTER I.

'I HOPE to goodness, dear Lady Cheshunt won't disappoint me at the last moment. Her presence would give quite an eclat to the affair. But she is so eccentric and forgetful—at least so I am given to understand—that little dependence can be placed on anything she promises.'

'After what Mr Roding has done for her nephew in obtaining for him such an excellent appointment in the City, it would be very ungrateful of her not to come.'

'It would be just like her not to do so. Her nephew has got the appointment, and I have no doubt that is all she cares about. And yet, I do so wish she would put in an appearance, although she is only a baronet's widow, and is deaf and disagreeable into the bargain. Mrs Barker and Mrs Wignall will both be here, and I know for a fact that neither of them has been able to secure any one of higher standing than a Dean's daughter at their dinner-parties.—Well, we can but hope for the best. I sincerely trust that the dining-room of our next house will be nothing like so cramped in size as this one.'

'Surely, you are not thinking of leaving this house already! You have only been in it since last June.'

'That may be,' said the elder lady with a nod of her head, which she meant to be full of significance; 'but Mr Roding has said several times of late that he doesn't like this neighbourhood. Now that he is coining a fortune so rapidly, he thinks we ought to aspire to something higher—that, in fact, we ought to get into a different "set." He even hints at a mansion in Tyburnia or West Kensington; and I myself often feel that I am scarcely in my proper sphere in these suburban circles, however exclusive they may try to make people believe they are.'

The person who enunciated this candid expression of opinion was Mrs Matthew Roding, of Chesterfield Villa, Tulse Hill. She might have been two or three and thirty years of age, and was not without considerable pretensions to good looks; but as against those pretensions must be

set down her vanity, her affectations, and a selfishness so transparent as to deceive nobody. Although it was still early forenoon, she was as overdressed as she always was. She would not merely have been offended, she would have disbelieved any one who told her how much more attractive she would have looked in a simple morning robe, and minus her rings, chains, and bangles, than in the befurbelowed and befounded dress, with its long rustling train, which she was now wearing. But not to every one is it given to appreciate the charms of 'sweet simplicity.'

Her companion was a brown-haired, brown-eyed girl of twenty, Mary Nunnely by name. She was a distant relative of Mrs Roding, and was the orphaned daughter of a country doctor who had died in impoverished circumstances. When, after her father's death, and with only twenty pounds in the world, a home was offered her by Mrs Roding, Mary gratefully accepted it, and here she was still. But Mrs Roding knew quite well what she was about in making the offer in question. The world gave her credit for doing a charitable action, which is a charge that all of us can bear with equanimity; while at the same time she obtained a companion for herself, whom she could snub or make much of, as the whim might take her, and a governess for her only child, at a much less cost than the market price of that commodity. Fortunately for herself, Mary had one of those happy dispositions which not all the little slights and snubs to which she was subjected, disagreeable though they might be and were at the time, had power either to sour or harden. The sunshine might be clouded for a little while, but that was all; a few raindrops might fall, but April showers are gone almost as quickly as they come. Then, again, Mary was not without certain compensations, of which Mrs Roding knew nothing; of what nature these compensations were, we may learn later on.

Scarcely had the last envelope been addressed, when there was a sudden disturbance and irruption. Through the open window which looked on to the lawn came prancing, with an activity which belied his apparent years, a very tall, gaunt, bony, white-haired old man, with massive aquiline features, bushy eyebrows, and keen, deep-set, cavernous eyes. He was dressed in a black tail-coat and pepper-and-salt trousers, with a black silk neckcloth, and a high pointed collar. On his back he was carrying a boy some five or six years old, in one of whose hands was a tin sword; while the other held a toy trumpet, on which he was sounding a fanfare with all the breath at his command. The old man in question was 'Grandad' Roding, aged seventy-two this very day; the youngster was his grandson Freddy. Grandad just now was supposed to represent a fiery Arab steed, while Freddy was a gallant knight riding away to the wars.

Mrs Roding's hands went quickly up to her ears. 'Child, child! do you want to drive me crazy!' she cried. 'Do at once cease that horrid noise.'

'It ain't howid; it's bootful,' answered Freddy the bold; and with that he blew another blast, louder than before. Then to his steed he said 'Whoa!' and proceeded to dismount on to a chair. The steed sat down on another chair,

slightly blown. Mrs Roding looked as black as a thundercloud.

Turning to his daughter-in-law, as soon as he had recovered his breath a little, Grandad said: 'I have come to thank you, Matilda, for the pretty posy I found on my breakfast table this morning: it shows you have not forgotten what day this is.'

'I don't know what you mean "by a pretty posy,"' answered Mrs Roding in her most ungracious manner. 'Certainly, it was no present of mine: neither do I understand your allusion to what day this is.'

'Ah, then, if the posy didn't come from you, I can give a good guess who it did come from; and his eyes turned meaningly on Mary, who, however, was busy affixing postage stamps and did not seem to hear a word.

Turning again to Mrs Roding, Grandad went on: 'If you have forgotten what day this is, or don't care to remember, I may just remind you that it's my birthday. I'm seventy-two years old to-day—sev-enty-two.'

'Ah, indeed. Well?'

'Nothing much. Only, I want you to do the same to-day as you did last year, and the year before that. I want you and Matthew to come and dine with me in my room, and'—

'It is quite impossible—altogether out of the question, Mr Roding; so you needn't say another word. My husband and I are engaged to dine out this evening in Upper Brook Street, where we expect to meet a number of distinguished people.'

'Ah, in that case, as you say, not another word is needed. Still, I'm sorry; but that matters to nobody but myself.—Come, sonny, let's off to the wars.' He bent his long back; and Freddy, standing on a chair, remounted his gallant steed; and away the two ambled out on the lawn, Freddy blowing a parting blast of defiance as they went. It was noticeable that the child never went near his mother, nor, after his first remark, addressed a single word to her.

'Tiresome old man!' remarked Mrs Roding as soon as the two were out of hearing. 'But he can't expect many more birthdays at his time of life. He's getting quite into his dotage; and the way he spoils that child is altogether outrageous. I must really persuade Matthew to insist upon his living in a little cottage somewhere in the country, with an old woman to look after him.'

As there was nothing in this remark that seemed to call for any reply from Mary, she made none to it. Presently she said, in her quiet way: 'Had I not better go and post these notes at once, and then most of them will get delivered in the course of the afternoon?'

'Perhaps it would be as well to do so, seeing the time is so short. I must consult Mr Roding about the *menu*. He's quite an hour past his time this morning. I never knew him to be so late before.'

Scarcely had the words left her lips when Matthew Roding entered the room. At the same moment, Mary Nunnely left it by another door.

Five minutes later, Mary was speeding down the street to the nearest post-office. It was a bright spring morning, and the fresh air and sunshine brought out the delicate roses in her cheeks, which, when she was indoors, were less seen than

suggested. As she was turning a corner rather quickly, she nearly ran into the arms of a young man who was coming with rapid strides in the opposite direction. They both started back in amazement, and then they both laughed: Mary blushed as well.

'Why, Ruff!' exclaimed the astonished girl.

'Why, Mary, my darling!' cried the young man; and then somehow he got possession of her hand. 'It's the luckiest thing in the world that we should have met in this way.'

'Why is it the luckiest thing in the world?' asked the girl demurely.

'Let me turn and walk with you, and then I will tell you,' was the answer.

Ruff Roding was the son of Matthew Roding, and was secretly engaged to Mary Nunnely; but this was a fact of which no one save Grandad was cognisant.

But before proceeding further, it will simplify matters to explain, as briefly as may be, the position of the different members of the Roding family with regard to each other at the time we take up their history.

Some fifty-five years previously, Abel Roding, a rawboned country youth, fresh from school, the second son of a small Cumberland 'statesman,' found himself thrown, by no wish or will of his own, into the great seething vortex of London life. There was no room for him at home, and he had come all the way to London Town to fill the situation of junior clerk in the counting-house of Messrs Dibble and Tyson, oil and flax merchants, Bankside. In the service of this firm he had remained, without any thought of change or wish to try to better his fortunes elsewhere, till his fiftieth birthday had come and gone. Then Mr Dibble died—the other partner had died twenty years before—and Dibble junior, who preferred club-life at the west end to looking after such vulgar commodities as oil and jute in the east, was glad to benefit by the long experience of Abel Roding and take him into partnership. Five years later, Abel was in a position to buy out Dibble junior, and take over the business into his own hands. This he did, but without changing the long-standing title of the firm.

His home-life during all these years had not been without its changes. At the age of two-and-twenty he had married, but only to lose his wife some three or four years later. She left him with a son two years old. This child, Abel, not without many pangs of regret at having to part from him, despatched to his old home among the Cumberland fells, where there were plenty of warm-hearted women-folk to look after the motherless boy, and where he would grow up hearty and strong amid the wind and sunshine of the moors. After this brief episode, Abel Roding's domestic life settled down into a routine from which it never varied for forty long years. He rented a couple of rooms in a quiet street off the City Road, with windows that looked on to the New River, which at that time had not been covered in. These rooms were consecrated to him by the memory of his young wife, and not even after the oil and flax business had become his own did he care to leave them.

Except when the weather was very bad, Abel, accompanied by his stout gingham, walked to and fro between his lodgings and the office. At other

times the 'bus conveyed him. He never varied more than a couple of minutes in his time of leaving home, and his return might be predicted with almost equal certainty. He always dined at one place, a little dingy, out-of-the-way tavern, where even on the brightest day in summer a glimmer of gas was needed. Two or three evenings a week he spent a couple of hours in the bar-parlour of a quaint, old-fashioned tavern in the Essex Road, which since those days has been transmogrified into a flaring gin-palace of the most pronounced type. Here a little knot of congenial spirits were wont to assemble, nearly all of whom were brothers of the angle: Islington, of old called 'merrie,' was always noted for the number of its disciples of the 'gentle craft.' Over church-warden pipes and a few modest 'goes' of grog, matters piscatorial and political were discussed with equal gusto, minnows and ministers both coming in for their due meed of criticism. By half-past ten the company, gently mellowed, had broken up and gone discreetly home, like good citizens who knew they had business to attend to on the morrow. On other evenings, Abel stayed quietly at home with no company save that of his beloved fiddle. He had a fair ear for music, and some taste into the bargain, and, as he expressed it, could play sufficiently well to please himself, which was all that was needed. The music of his choice was in the main that of dead and gone and all but forgotten *maestri* of the French and Italian schools of the last century. He was apt to look askance at compositions of a more modern date. He remained faithful to the loves of his youth, and desired to know none other.

Every autumn he went down to Cumberland for a week to see his boy. The lad grew up strong, wilful, impetuous, and boastful; there was a strain of blood in him which it was difficult to believe he could have inherited from his staid, thrifty, shrewd, yet unambitious ancestors on his father's side. Young Matthew Roding would never have been content to spend his life within the narrow confines of a Cumberland valley. By-and-by it came to the question of a career for him, and Abel was utterly puzzled what to do with the lad. Fortunately, the difficulty soon solved itself. From a distant connection came the offer of a situation in a stock and share broker's office in Liverpool. It was an offer that young Matthew jumped at. Even at that early age, the one ambition of his life was to live and die a rich man, and now his foot would be planted on the lowest rung of the ladder he meant to climb. So to Liverpool he went.

Several years passed, and, to all appearance, Matthew Roding had done nothing to justify the ambitious dreams of his youth. He was a clerk at a hundred pounds a year, and nothing more. At an early age, he committed the imprudence of marrying a girl as poor as himself; but his married life, like that of his father, was not of long duration. In a few years he was a widower, and left, as his father had been left, with one son, who in due course was sent to Cumberland to be there brought up; and so more years went by.

This youngest member of the Roding family—Ruff by name—proved to be a born artist, although those around him either would not or

could not recognise the fact till the lad was well on into his teens. He began to draw men and women, horses, cows, and sheep, after a rude but intuitive fashion, before he could either read or write; and as he grew in years the faculty grew with him. When he was fifteen years old his father sent for him. A stool had been found for him in a Liverpool counting-house, and, much to Ruff's disgust, he was made to feel that there was no option left him but to accept it.

Meanwhile, Matthew Roding had married again, and this time his wife brought him a dowry of five thousand pounds. With this sum for a basis, he began to speculate boldly, and in the main successfully. In a little while, he threw up his situation and took to himself a partner, of like proclivities to his own. The new firm called themselves 'financial agents;' but in reality they speculated largely on their own account, and at length Matthew Roding's dream of a fortune seemed on the high-road to be realised. He had not, however, calculated on one possibility, which was that of having a rogue for his partner. During a brief holiday which the state of Matthew's health compelled him to take, this man absconded, taking with him not merely the firm's balance at the bank, but every negotiable security he could lay hands on. At forty-five years of age, Matthew Roding found himself a ruined man. The blow was a terrible one.

In the meantime, matters had gone anything but smoothly between Ruff and his father. The lad hated the drudgery to which he was condemned, but his father persistently kept his nose to the grindstone. He had no belief in Ruff's ability as an artist, and scouted the idea of any son of his attempting to earn a livelihood after a fashion which to him seemed little better than disreputable. Then, again, Ruff's stepmother had from the first taken a strange dislike to him: it was the narrow jealousy of a narrow-minded woman; and that did not tend to make home more attractive to him. At length the inevitable climax came. An election was at hand, and party feeling ran high. Certain clever caricatures and *jeux-d'esprit*, which attracted considerable attention at the time, were traced home to Ruff Roding, and the consequence was an explosion. The firm by whom Ruff was employed happened to be on the opposite side—the side caricatured—and they at once gave the audacious young satirist notice to quit; while his father sternly forbade him ever to cross his threshold again. Nothing daunted, the young man set out for London, determined to seek his fortune there with the help of that gift which nature had so evidently implanted within him. But before that happened, he had set eyes on Mary Nunnely.

Ruff's grandfather received him kindly, and applauded the resolution he had taken, much to the young fellow's surprise. They had not met since Ruff left Cumberland; but before that, on the occasions of Grandad's annual visits to the north, they had been much together, and each had conceived a strong affection for the other. Ruff had brought a few pounds with him to London, together with a portfolio full of sketches and water-colour drawings of various degrees of merit, or demerit; and he proceeded to establish himself in a third-floor-front in that portion of the west-central district which is most affected

by struggling geniuses in his particular line. He had taken lessons for some years in one of the Liverpool night-schools; but he knew how defective his education in that respect still was, and he at once set about remedying it. He husbanded his resources to the utmost; but his tiny store of sovereigns slowly dwindled, and at times even his sanguine spirit began to despair. By-and-by, however, he contrived to dispose of a few of his water-colours, of course at a ridiculously low figure, and he was also enabled to earn a few precarious shillings by his drawings for one or two papers, chiefly of the 'penny dreadful' kind. Later, but not till his struggle had lasted for three long years, he found more permanent and lucrative employment on some of the higher class of illustrated papers and magazines.

Every Sunday, Ruff made a point of dining with his grandfather at Islington. Grandad and he got on famously together, and the old gentleman was never tired of listening to the account of the young man's struggles and adventures during the week; and yet, strange to say, he never even hinted at opening his pursestrings for the other's benefit. Probably, he was not without reasons which seemed good to himself for his apparent penuriousness. As for Ruff, he had only the haziest notion of what his grandfather's position in life really was. He had a vague recollection of having heard that the old man had succeeded to a business of some kind; but, judging from his surroundings and mode of life generally—he never failed to grumble if his 'bus fares for the week amounted to more than ninepence—Ruff concluded that the business in question was probably that of a small shopkeeper in some out-of-the-way nook of London. He was altogether incurious in the matter, and the old man never spoke about his private concerns. No one would have been more amazed than Ruff Roding had he been told that his grandfather's cheque for ten thousand pounds, or it may be for double that amount, would have been duly honoured by his bankers.

When Matthew Roding found himself a ruined man, he went up to London to consult his father, who at that time was sixty-nine years old, but by no means looked his age. The result was that Matthew accepted the position of managing clerk to his father at the same salary that had been paid his predecessor, who had lately died. Half a loaf was better than no bread, and the situation would afford Matthew breathing-time while waiting for something better to turn up.

Abel, who had seen but little of his son during the past twenty years, had never rightly gauged the ambition of the latter—an ambition which rendered a life of plodding industry, even though there might be substantial gains at the back of it, utterly distasteful to him. If Matthew Roding ever conquered Fortune it must be by 'leaps and bounds;' his father's old-fashioned mode of doing business had no charms for him.

Matthew's knowledge of his father's business transactions, or of the probable amount of his income, had only been a little less vague than that of Ruff; consequently, he was more than surprised, he was amazed, when he came to look into the books and to sum up in their totality the entries he found there; but his amazement had a large element of the agreeable mixed with it. If figures

spoke the truth, his father must be a much richer man than he had ever imagined him to be. The bank pass-book told him nothing except the amount of deposits and withdrawals; but to what purposes the latter were applied he had no means of ascertaining, his father's private ledger being sacred from every eye but his own. Matthew began to have visions of a possible partnership before he was much older, and of something better still when his father's span of days should be finally run. He began to respect the old gentleman as he had never respected him before, and to feel an interest in the fluctuations of oil and hemp which would have seemed impossible to him three months previously. Having a definite end in view, he resolutely set himself towards the attainment of it. He dressed as soberly as Abel himself, and, to all appearance, lived almost as penuriously—but only in appearance. He reached the office as punctually in the morning, and stayed as late in the afternoon as his father did; but his evenings were his own, and he spent them after his own fashion. And so a twelve-month went by, and then Abel Roding made the one great mistake of his life.

Ever since his start in London, it had been the wish of his heart to be able one day to retire with a competency, great or small, as the fates might determine. He was seventy years of age; his son had taken to the business in a way that both surprised and delighted him; surely now, if ever, was the time for him to carry out his long-cherished wish. He was not a man to do things by halves when once he had made up his mind. Instead of taking Matthew into partnership, he determined to make the business over to him in its entirety, and secede from it altogether himself. A month later, Matthew Roding, to his unbounded astonishment, found himself sole master of the situation, with a balance of ten thousand pounds transferred to his name at the bank—the frugal savings of his father's lifetime. One or two stipulations Abel made: the first was, that the name of the firm should in no wise be changed; and another was, that Matthew should find board and lodging for him under his own roof, free of charge, for the remaining term of his life.

#### THE CENTENARY OF THE FIRST ASCENT OF MONT BLANC.

THE month of August last marked the centenary of the first successful ascent of Mont Blanc, by Horace Benedict de Saussure; and the inauguration, this summer, of a monument to the Swiss savant at Chamouni was consequently made the occasion of a popular demonstration in his honour. How much Saussure did towards rescussitating the obscure valleys of the Arve and Chamouni from oblivion, the following brief sketch of his life and scientific work will show.

Saussure was born in 1740; and at an early age he was the associate of such men as Pictet the astronomer, Bonnet the philosopher and mathematician, and Albrecht Haller of Berne. At the age of nineteen, when still a student at the Geneva Academy, he wrote a work on the Nature of Fire. Becoming acquainted with the investi-

gations of J. Pitton de Tournefort and the great Linnaeus, the young Professor of Mathematics commenced the study of botany. In 1762 he became Professor of Philosophy. About the same time, electricity began to engage the attention of the scientists of the period. After studying the works of Franklin, Volta, and Nollet, Saussure invented, in 1784, a portable electrometer, which he used in his investigations of aerial electricity. Saussure was a great traveller, and in 1768 he visited France, Belgium, and England. The year 1772 found him in the scientific circles of Paris. Subsequently, he travelled in Italy, visiting Tuscany, the Italian islands, and Rome, where he was historian, antiquary, naturalist, and artist at the same time. He then proceeded to Naples and Sicily, where he climbed Etna, the craters of which supplied scientific work for him. Everywhere he carried with him his meteorological and hygrometrical instruments and the indispensable hammer, collecting whatever seemed interesting to him. On returning from his travels, he collected his experiences and gave them to the world.

Saussure's greatest merit consists in his study of the Alps, in which branch of investigation he was the pioneer, taking observations on air-pressure, temperature, light, and electricity on their heights, which are still used at the present day. At the opening of the eighteenth century, a perfect travel-fever seized upon savants, and the latter gradually penetrated into the Alpine world. The Alps of Savoy were the least known. The fertile and beautiful valley of the Arve was visited from Geneva; but the valley of Chamouni, lying at the foot of Mont Blanc, remained almost a closed book. And yet this valley is one of the most wonderful of the Alps. It is far from any route of communication, almost isolated, trending in a direction from north-east to south-west, from twenty to twenty-five miles long, and only about a mile wide. It is watered by the Arve, and bounded on the north-east by the Col de Balme, on the south-west by the Lacha and Vaudagne, on the north by the Brevant and the chain of the Aiguilles ranges and by Mont Blanc (15,732 feet). The village of Chamouni, which at that time was inhabited by chamois-hunters and shepherds, was poor and little known. In the summer of 1741, two Englishmen (Pocock and Wyndham) penetrated into the obscure valley and made it known to the world. From that time, the number of visitors increased. Twenty years later, two Englishmen made the first attempt on Mont Blanc, but did not reach the region of snow. Saussure, in his eagerness to study the Alps, also paid a visit to the valley, and ascended, within a radius of about two hundred and fifty square miles of the Alpine world, a number of peaks of average height. On August 1 to 3, 1787, finally, he made, in company with his servant and eighteen experienced guides, the first successful ascent of Mont Blanc, which undertaking he describes in his charming pamphlet, '*Relation d'un Voyage abrégé à la Cime du Mont Blanc en Août 1787.*'

Up to 1834 the mountain was ascended only seventeen times, after that year more frequently, and now ascents are of common occurrence. This summer, the highest point of Mont Blanc

was reached by two Russian ladies, the sisters Gortchakoff; they made the ascent in twenty hours. The ladies, who were accompanied by two guides, were enthusiastically received on their return to Chamouni, and almost buried in flowers. Amongst the 1032 persons who, up to the present year, have scaled Mont Blanc, there are a few other instances of ladies having successfully made the ascent. Englishmen are most largely represented in the crowd who have successfully ascended the mountain. Since Saussure's ascent, many routes have been discovered by which the summit may be reached much more easily and more quickly. At the present day, Chamouni is a beautiful village with many hotels, and is visited every year from June to September by thousands of travellers. The inhabitants of Chamouni are indebted for their present prosperity to the intrepid traveller and scholar whom they have honoured this year.

### OUR HOLIDAY GHOST.

Two years ago, last July, my better-half, one morning after breakfast, came and placed her arms affectionately on my shoulders, and gazing into my face, made the portentous remark: 'John, dearest, I don't think you are looking half well.'

'Really, my love!' I replied with composure; for I had never felt better in my life.

'No, dear. You look jaded and worn-out rather. You have been sticking too close to that horrid work of late, and I am sure you want a rest.'

Now, experience had taught me that these spontaneous manifestations of sympathetic concern on the score of my health—which by a strange coincidence had recurred about the middle of every summer of our five years of married life—were the invariable preliminary to a proposal for a stay of some weeks in the country or at the seaside; so, with a prompt and commendable appreciation of the situation, I rejoined: 'That is to say, you mean that *you* are tired of Carlisle, and would like a change, eh? Well, I have been thinking about it myself, to tell you the truth. I suppose we must go somewhere. And what is the favoured spot that your ladyship would like to patronise this summer?'

'John, you are an old dear!' answered my wife with seeming irrelevance, but with great fervour. Then taking up a newspaper, she continued: 'Look here—what do you think of this?' pointing to the following advertisement:

*'Seaside Lodgings.*—Porthpenllwyd, Pembrokeshire. To let, for any period between three and six weeks, during the temporary absence of the owner, a comfortable Cottage, furnished. Suitable for small family. Beautifully situated on St Bride's Bay, in a village of three hundred inhabitants. Bathing and fishing excellent. Use of boat. Every convenience. Terms moderate.—Apply X Z, the Post-office, Porthpenllwyd, R.S.O.'

'What, in the name of fortune,' I exclaimed, 'possesses you to think of going to an outlandish place with an unpronounceable jaw-breaker of a name like that? Why, it will take us two days at least to get there; and when we do get there, we may find ourselves in the midst of a

land of barbarians, in the etymological sense, who won't understand a word we say without an interpreter. You would be tired of it in less than half a week, and find it slower than Silloth.'

'Impossible,' said she emphatically, as the recollection of a month spent at that watering-place rose vividly before her mind. 'No, dear; I thought it would be such a thorough change for us. You know I've always longed to go to Wales. And if the inhabitants are barbarians, as you call them, so much the more fun; we can have all the sensation of being on the continent, and getting misunderstood, for less than half the expense!—Besides, I don't think it is such an outlandish place. I believe it is this *Porth*—what is it?—that I have heard Ethel Austin speak of as one of the quaintest, most delightful old-fashioned villages you could find. It was *Porth*—something, anyway; and I know my cousin Tom, who is in India, once went down as far as St David's Head, and simply raved about St Bride's Bay for ever afterwards. And I thought, dear' (insinuatingly), 'you always said you liked a quiet place, and that the racket of a fashionable resort was no change for you,' &c.

I caved in. To make a long story short, the matter ended, as every sensible reader has foreseen it would, in my writing to X Z (a gentleman, it turned out, of the uncommon name of Jones), and settling, after satisfactory inquiry, to take the house for a month from the beginning of August. Accordingly, we left Carlisle at the appointed time, a party of four; the other two being Master Jack—the junior member of our family, a sturdy young gentleman of the mature age of three and a half—and his nurse, Maria Emma (pron. 'Mariar-emmer'), who was his constant and devoted attendant.

I resist the temptation to expatiate on the events of our journey, or to launch forth into detailed description of our travelling miseries, which culminated in the seemingly interminable ride in a crowded old-fashioned stagecoach along a road the nature of which has already been sufficiently and graphically expressed by the laconic description, 'Sixteen miles and seventeen hills.' Very novel and romantic it was, no doubt, to sit on the box of a last-century coach, with the horn of the postillion tootling merrily away to awaken the echoes all around, and the crack of the driver's whip combining with the sound of his terrific guttural objurgations to stimulate the flagging energies of the horses to activity; while away to our left stretched the calm blue expanse of St Bride's Bay, sparkling and scintillating into myriad gems in the golden beams of the setting sun, as we sped up hill and down dale along its shores. All very poetical and stimulating to the imagination, no doubt. But one appreciates these things better when they do not come on top of a day and a half's dusty railway travelling, and when one is not in a frame of mind which is far more concerned about supper than scenery.

Well, we arrived at Porthpenllwyd at last, and found our cottage all our fancy painted it, and more. It was beautifully situated and no mistake, standing by itself, and overlooking a placid creek a furlong wide, which wound its way in a graceful curve between lofty cliffs, covered with a wealth of blooming heather and gorse for three-quarters of a mile inland. Mr Jones (alias X Z), a

pleasant-looking old bachelor of fifty, was there to receive us, and did the honours that night with great courtesy, leaving on the following morning, after showing us round generally, and seeing that we were comfortably settled in our temporary abode.

Of the first week of our stay there is not much to record except the usual series of seaside enjoyments—the perfection of bathing in water as clear as crystal, boating and fishing of every kind in abundance, plenty of beautiful scenery to keep my wife's brush abundantly employed (Laura is fond of sketching), plenty of bright shells on the beach to be gathered diligently by the assiduous Mariaremmmer for John junior's delectation—in short, everything calculated to satisfy and delight people who can enjoy life under conditions of Arcadian and primitive simplicity. I will not dwell on these events, but hasten on to the climax of my story.

On the eighth day, I think it was, after our arrival, my wife, who had gone down to the village, according to the established usage of Portpenllwyd, to inquire for letters at the post-office, came rushing into the house in a breathless state of excitement. 'O John, who do you think is in the village?'

'Well, I should imagine, the Shah of Persia at least, or perhaps the Prime Minister,' I suggested.

'Don't be provoking. No; Ethel Austin is here. She came last night, and was being driven to St David's. She has an aunt living there. But the horse fell coming down the steep hill leading into the village, and she and the driver were pitched out. Fortunately, they were more frightened than hurt; but the shafts were broken and they couldn't go on; so she stayed at the inn all night.'

'Dear me, what a thrilling adventure!'

'Yes; and I've made her telegraph to her aunt to say she is not coming just yet, as she has found us; and she is to stay with us for a few days. She can have the middle room. Won't it be jolly to have dear Ethel here?'

'Oh, very, my dear. She will be nice company for you. But who'd have thought of her turning up in this unexpected kind of way?' This Miss Austin had been my wife's bosom friend at a London boarding-school, and they had kept up the intimacy loyally ever since. She was now about eight-and-twenty, and being of a warm-hearted sentimental nature, had lapsed, for want of a husband, into that gushing type of tender womanhood which indulges in idealistic theories of life, and is fond of discoursing largely about 'sympathies,' and 'affinities,' and 'attractions,' and other subtle agencies of the same mysterious kind. She was also a firm believer in spiritualism. I often used to wonder how her intense and effusive nature, which poured itself forth periodically in sheets of densely written note-paper, could receive enough nourishment from Laura's brief matter-of-fact epistles to keep alive the sacred flame of affection between them in her heart. But such, it seemed, was the case; and Laura was, I know, glad to see her. So, about noon, her travelling trunk arrived at the cottage, followed shortly after by its owner, who received a very hearty welcome from both of us, Laura declaring that she would have to stay a fortnight at least. And in this way Miss Austin

became a temporary member of our small and happy family.

As I said, that lady was a firm believer in spiritualism, of which we soon found she was a most aggressively zealous advocate; nor was she backward in proclaiming her views for our edification both in season and out of season. It amused me to argue with her and draw her out upon this subject, she used to get so eloquent and enthusiastic.

One evening—she had been with us about a week, perhaps—we were sitting, we three, in the cosy little front sitting-room of the cottage, looking out upon the sea in the twilight. It was a glorious night; and the harvest moon just rising above the Gribin hill opposite streamed in through the windows and lit up parts of the room with a 'dim religious light,' leaving the rest in strong shadow. Jack had been put to bed, and Mariaremmmer was sitting sewing in the next room. Miss Austin was holding forth with her customary enthusiasm on her pet topic.

'You may sneer as much as you like,' she was saying, 'and marshal your materialistic arguments with all your ability; but you will never persuade me that the dwellers in the spirit-world do not still feel an interest in the scenes and associations with which they were once familiar. Why, then, should not they be able, being untrammelled by any physical restrictions, to return and hold converse with those who were and are dear to them, and to make their presence known by certain external and material indications?'

'Well, it rather puzzles me—it may be my obtuseness, of course—but I can't quite make out how a spirit can make a noise, for instance, by rapping its shadowy knuckles on a substantial wooden table; or what interest a staid and solemn ghost can take in playing frivolous pranks with fiddlestrings and slate pencils.'

'Scoff away now, you unbeliever,' she retorted; 'perhaps even you will be convinced some day.'

'Pooh—never. You may be sure that'—My sentence was cut short by a crash as of falling crockery, followed by a scream from the region of the pantry, and the next moment the door of the sitting-room was unceremoniously burst open by Mariaremmmer, who appeared with a look of terror on her white face and a candle in her trembling hand.

'O master, missus!' she gasped, 'that I should ha' lived to see this night.'

'What's the matter?' we chorused.

'There's evil sperrits in the pantry,' said she, in a horror-struck tone of voice.

'Rubbish!' I exclaimed. 'The only spirits in the pantry I know of are good spirits—Home & Brindle's best Scotch, in fact'—forcing a joke. 'Maria Emma,' I proceeded sternly, 'if you have been meddling with those spirits, and let one of the bottles fall'—

'No, no, no,' interrupted she eagerly; 'not them sperrits at all, but them other sperrits what Miss talks about, what raps and makes noises. So true as I'm a-standin' on this blessed spot, just now as I was a-carryin' a plate into the pantry, I heered somethin' go rap, rap, rap, like that, three times. It did give me such a turn, and the plate dropped from my hand, and went all to smash on the floor. If I'd a-known as we was a-comin' to a house with uncanny things like that in it'— The sentence

terminated in a display of suggestive pantomime. Mariaremmers's feelings were too strong for words.

Miss Austin looked very much interested, and turned to me with an unmistakable expression of triumph in her face. Laura was plainly alarmed; and I must confess to a momentary sensation of 'creepiness' myself. Sitting in the dark and talking about ghosts is calculated to give an eerie feeling even to the most strong-minded of sceptics, and Mariaremmers's interruption had certainly come with an appropriateness which was, to say the least of it, startling. I tried, however, to let no trace of my weakness appear in my voice as I banteringly remarked to Miss Austin: 'I hope you are pleased with the effects of your preaching. Here's Maria Emma so affected by your observations on spirit-rapping and such things, that she can't go into the pantry without breaking plates under the influence of the delusion that she hears ghostly noises.'

'Hadh't we better investigate for ourselves,' said Miss Austin, in a tone of mild confidence, 'before we pronounce it to be a delusion?'

It was evident from her manner that she really believed this to be a supernatural demonstration for my benefit to vindicate the truth of the manifestations which I had been deriding.

'By all means,' I said, with an assumption of eagerness. 'We'll all go together.'

Mariaremmers protested at first that nothing on earth should induce her again to visit that awful spot, but finally acquiesced, 'if missus would go first,' which Laura heroically consented to do.

So we marched in procession to the pantry. I took the lead, armed with the kitchen poker (this was in deference to the combined entreaties of my wife and the servant, though for my part I could not see what advantage a poker would be in the event of an encounter with a ghost; but it seemed to give them a feeling of security); Miss Austin came next, Laura and Mariaremmers bringing up the rear. When we got there, everything was perfectly quiet and in its normal condition. Nothing revealed itself to eye or ear to indicate the presence of anything out of the common. Nothing could have looked more prosaic and of this world than the empty beer-bottles and the cold remains of the shoulder of mutton we had had for dinner. Decidedly the most ghostly-looking object in view, to my thinking, was a lean fowl of scraggy aspect which hung dejectedly from a pothook in the ceiling, and certainly presented a very unsubstantial appearance, viewed in connection with the thought of its presentation at table in the near future to satisfy the needs of four hungry people.

'Well,' I laughed, 'I hope your minds are at rest now. There's nothing here, you see.—Silly girl!'—to Mariaremmers—'what a fright you've given yourself and us about nothing.'

'Indeed, sir, it was something,' she protested.

'Nonsense! Mere fancy. If there are any spirits here,' I went on boldly, 'I call upon them now to signify their presence in the usual way—and be quick about it too, or they won't have us for an audience.'

Rap, rap, rap, followed by a sort of scraping, creaking noise, was the immediate response, as if in direct answer to my audacious challenge.

My heart jumped to my throat. The women

screamed; Mariaremmers fled precipitately; Laura stood her ground, clinging desperately to Miss Austin, who turned to me and said solemnly: 'Are you convinced now?'

'Not yet. I must see and hear more.—It may be only the mice,' I said feebly, and fully conscious that the explanation sounded very lame and inadequate.

'Mice don't make a noise like that,' said she. 'I am sure,' she went on with conviction—'I am sure it is a messenger from the unseen world. I wish I were a medium, and knew how to address it.'

'So do I, if it would lead to a solution of this mystery.'

'Hark! there it is again.'

And again we heard the same noise as before, an irregular knocking, as on some metallic substance, which produced a resonant hollow kind of sound, varied at intervals by the same rasping, scraping noise which we heard at first.

'O John, let's go away from this horrid house at once!' implored my wife with a tremble in her voice.

'We can't go to-night anyway, my dear, and this knocking is harmless enough, in all conscience,' I said, my courage beginning to return. 'And if Miss Austin cannot lay the ghost she has disturbed, I am determined to take no rest till I have fathomed this mystery.'

The knocking was heard more vigorously than ever.

'Poor spirit!' sighed Miss Austin sympathetically; 'how eager it seems to unburden itself of the message with which it is charged. And alas! there is no one who can relieve its pangs and interpret these mystic symbols. How I wish my friend Mrs Anson were here. She is a medium. I will write for her to come to-morrow.'

'No-o-o, please,' shivered Laura. 'Perhaps the ghost won't stay if it finds it isn't understood here, and may go somewhere else. We don't want any medium—do we, John?'

'Certainly not, my dear. We won't have Mrs Anson here. I don't mean to encourage ghosts to hang about these premises.' Renewed interruption—this time only the scraping noise was heard.

'I'll eat my hat,' said I vehemently, after a pause, 'if that noise doesn't proceed from rats; though how on earth a rat could make those other noises and rattle away like a telegraph operator or a pair of castanets, I must own, gets over me for the present.—Yes, and it comes from that corner too,' I added after a moment, pointing to a stone bench, the space under which was occupied by some empty bottles and an old broken filter.—'Wait a minute. If it's rats'—And I turned with a sudden resolution towards the door.

'Where are you going?' asked the others.

'To borrow Captain Lewis's dog. I think he'll be more use than a medium.'

'What sacrilege!' said Miss Austin, horror depicted on her face. 'Fancy! Setting a dog at a spirit! Something dreadful will happen to us, I am sure.'

'Oh, don't leave us!' implored Laura.

'You wait in the front parlour; I shan't be gone five minutes'; and off I went.

Captain Lewis was our nearest neighbour, and lived about fifty yards away—a jovial old salt, who had retired from his profession a few years

before, and settled down for the remainder of his days in Porthpenillyd, his native place. He willingly consented to lend his little rough terrier Cymro for the purpose of the rat-hunt, which I told him I thought was on hand, and came himself to see the sport.

'If there's any vermin there,' said he, 'I'll back Cymro against any dog I know to give a good account of himself.'

So we returned to the scene of action once more.

Miss Austin refused to sanction our outrageous and sacrilegious proceedings by her presence, and Laura went up-stairs to comfort Mariaremmur, who had betaken herself to her room and hidden herself under the bedclothes, where she lay in momentary expectation of some terrible denouement to the events of that night.

No sooner had we got into the pantry and let the dog loose, than he went straight up to the corner I had indicated, and sniffing all round it, commenced barking, and showing other signs that his game was afoot.

'Something there, evidently,' said the captain.

'Stay,' I said. 'I'll move the old filter out of the way, for the dog to have a better chance;' and I lifted it up and placed it on a slab at the other end of the room. 'Now, then, Cymro, good dog.'

Strange to say, however, 'Cymro, good dog,' took no further interest in that corner, but began capering wildly round and flying up at the slab on which I had placed the filter.

'Bust me!' said the captain after a pause, with more force than elegance, 'if I don't believe there's something inside that old concern.'

'Wait a minute,' I rejoined. 'Just keep the dog quiet.' Then I put my ear to the outside of the filter. In a few seconds I heard unmistakably the tap, tap, and the scraping noise close to my ear. The mystery was solved. The ghost was indeed a rat, inside the filter. The question was, how had it got there, and how could it make that noise? On closer examination, we found that the filter was without a tap, and that the hole where the tap ought to be was choked up by something hard and roundish. This turned out to be the joint of a good-sized bone about four inches long; and the conclusion was forced upon us that, incredible as it may seem, the rat had abstracted this bone from one of the dishes, carried it to the hole, and succeeded in dragging its burden in after itself until the thick end of the bone got too big for the passage, and stuck fast, thus making the rat a prisoner in its extraordinary retreat. The bone did not fit the hole all round where it was stuck, but was only in contact with the filter at two places, so that, while sufficiently tight to resist the efforts of the rat to expel it or drag it in altogether, the bone was still loose enough to admit of a lateral movement as on a pivot when touched at the other end; and thus it was that the frantic struggles of the imprisoned rat produced the mysterious noises which had given us all such a start.

I was not long before informing the other inmates of the house that we had captured the ghost, and I could not help adding maliciously to Miss Austin: 'Do write for Mrs Anson to come; we shall want her to interpret its mystic symbols.'

We did not think it safe to trust to Cymro's skill and liberate the prisoner in the semi-darkness, so we placed the filter bodily in a tub full of water, and wishing the captain good-night, retired to rest. Next morning, we extracted the dead rat from the filter, and all the family gathered round with interest to look on its remains.

'Here lies the ghost of the pantry,' said I, 'more a ghost now than he was when he imposed on us last night.'

'Only to think, now!' said Mariaremmur.

'O you wretch, what a fright you gave us!' said my wife.

'Let me play wif his tail,' said Master Jack.

Miss Austin looked rather foolish, but said nothing; and during the remainder of our stay, the taphole of the filter was carefully bunged-up with a large cork.

#### INCOMPLETENESS.

Not he who first beholds the aloe grow

May think to gaze upon its perfect flower.

He tends, he hopes; but ere the blossom blow,

There needs a century of sun and shower.

He shall not see the product of his toil;

Yet were his work neglected or ill-done,

Did he not prune the boughs and dig the soil,

That perfect blossom ne'er might meet the sun.

Perhaps he has no prescience of its hue,

Nought of its form and fragrance can foretell;

Yet in each sun-shaft, in each bead of dew,

Faith, passing knowledge, tells him he does well.

Our lives, O fellow-men! pass even so.

We watch and toil, and with no seeming gain:

The future, which no mortal may foreknow,

May prove our labour was not all in vain.

But what we sow we may not hope to reap,

Perfect fruition may not seek to win;

Not till, work-weary, we have fallen asleep,

Shall blossom blow, or fruit be gathered in.

Let it be so. Upon our darkened eyes

A light more pure than noontide rays shall shine,

If pain of ours have helped our race to rise,

By just one hair's-breadth, nearer the divine.

Upward and outward, plant-like, life extends;

Grows fairer as it doth the more aspire;

Never completed, evermore it sends

A branch out, striving higher still and higher.

Because so great, it must be incomplete,

Have endless possibilities of growth,

Strength to grow stronger, sweetness still more sweet,

Yearning towards God, Who is the source of both.

## CURIOSITIES OF CHESS.

BY THE REV. A. CYRIL PEARSON, M.A., AUTHOR OF 'ONE HUNDRED CHESS PROBLEMS.'

PUBLIC interest has of late been aroused by reports in the daily papers of the great match for the chess championship of the world, and space was spared, in spite of the absorbing claims of party politics, to record the progress of this famous fight. It will be well if we can help to strengthen the impression thus made in favour of this king of games by cracking for our readers some few chess-nuts, mindful ever, as we search into musty volumes, of the saying old and true that 'Sweetest nut hath sourest rind.'

Our game has found its way to us from the far East, and is not akin to any Greek or Roman game of chance. Although its votaries are comparatively few, chess may claim to have been universal, and its board and men have long formed what has been called a common alphabet, the factors of a language understood and enjoyed by men as widely separated as the palanquin-bearer, who reflects how he may best deliver a crushing mate to a pebble King on squares traced on Indian sand, and the Icelandic bishop who sits within his walls of solid snow, and with a block of ice for table, whiles away the tedium of a polar night. Let us briefly trace some of the many sources from which writers have sought to derive its history and origin.

There does not seem to be much to choose between the claim of one Xerxes, a Babylonian philosopher in the reign of Evil-Merodach, and that of Chilo, the Spartan, one of the seven sages of Greece. Some have ventured to ascribe the honour to Palamedes, prince of Eubœa, who flourished at the siege of Troy, and who may, therefore, have had ample leisure for the elaboration of a mimic siege. We find from more than one authority that the game may have been invented as a last resource by a general whose soldiers were on the brink of mutiny. It is said that Pyrrhus, king of Epirus, turned it to good account at such a crisis; and that a Chinese

mandarin, some nineteen hundred years ago, was able thus to soothe his troops, when they had become clamorous for home, and to reconcile them to their winter-quarters by proposing this amusement for their vacant hours, until, with the return of spring, they could take the field again, better fitted by their friendly contests for the stern realities of war. If, however, we are to believe Chaucer, it was

Athalus that made the game  
First of the chess—so was his name—

an assertion supported by Cornelius Agrippa, who tells us that Attalus, king of Asia, was an inventor of games. Finally, a manuscript in the Harleian collection gives us to understand that Ulysses (the crafty one) was first in this field. So many have been these claimants, that Herodotus gravely records the fact that the people of Lydia *did not* profess to have taken any part in the planning of board, or moves, or men.

We are prepared to find, in a game of which the true source is as uncertain as was that of the river Nile, that there have been different methods and manners of conducting it. Thus, in the Hindu game, four distinct armies are employed, each with their King, not ranged in the style of that four-handed chess which has been to some extent revived within the last few years, but shorn of their strength, so that each force consists of half the usual number; and marked by this further peculiarity, that each corps counts among its fighting-men a King, an Elephant, and a Knight, who slay, but cannot be slain.

In the Chinese game, which boasts the sounding title Choke-Choo-Kong-Ki (the play of the science of war), a river runs across the centre of the board, which their Elephants (equivalent to our Bishops), may never cross; and there is a fort, beyond whose limits their King may never pass.

In the Persian game, the Ferz (our Queen) advances one step forward on the opening move, in company with its pawn, thus taking up a position whence it can review and regulate the general attack. After this initial move, it can only

advance or retreat by one step at a time in a diagonal course.

Though, as we have seen, it is vain to attempt a proof from so many contradictory premises, and we must leave the actual origin of chess an open question, there can be no doubt at all that it dates as far back as any intellectual pastime that is known to us. We must be content to allow China, India, Persia, and Arabia to contend for the honour of having rocked Caissa's cradle, satisfied on our part to know that the Queen of chess, grown to maturity, has held sway in Europe for many a long year. There is in existence a book upon the subject written by a Dominican friar in the year 1200, and we are told on good authority that in 1070, a certain cardinal, of evidently narrow mind, wrote to Pope Alexander II. to report that he had had occasion seriously to reprove a bishop for indulging in a game of chess. The poor prelate pleaded that this was no game of hazard; but his superiors took a sterner view, and ordered him to repeat the Psalter thrice, and to wash the feet of twelve poor persons, in penance for his offence.

To times quite as remote as these we must refer some extremely curious chessmen which were found in 1831 in the island of Lewis, and placed in the British Museum. It seems probable to those who understand such matters, that these men, which are curiously carved, were made from the tusks of walrus, about the middle of the twelfth century, by some of those hardy Norsemen who then overran the greater part of Europe. The Hebrides were then subject to invasion by the Seakings, and were tributaries to the throne of Norway till the year 1266; we may therefore conjecture that these relics of early European chess were part of the stock of some Icelandic trader whose vessel was lost at sea; and that these ivory men, which are of various sizes, and must therefore have belonged to several sets, were washed ashore, and buried by the sand for nearly seven centuries.

Hyde dates the culture of this game on English soil from the Conquest, because, as he points out, the Court of Exchequer was then established; but there is an earlier record which informs us that 'when Bishop Ætheric obtained admission to Canute the Great upon some urgent business about midnight, he found the king and his courtiers engaged, some at dice, and others at chess.' From a similar source, we find that the game was turned to a very practical account indeed in those times, for when a young nobleman wished to gain permission to pay court to the lady of his love, the fond parent commonly made trial of his temper by engaging with him over the chessboard. A ludicrous old print of somewhat later date represents a garden-party of six ladies and as many gentlemen grouped round a table, at which one of either sex is standing in a most striking attitude pretending to play at chess, while the others amuse themselves in pairs with the languishing deportment of lovers, and seem less interested in the game than an owl which sits upon a rail, with one eye on the board and one upon the company; while three rooks (appropriate birds) are busy in the background with their own affairs.

It does not need the pen of a ready writer to prove to those who are real chess-players, in

however humble a degree of excellence, the pre-eminence of chess among indoor games of skill. As a test of temper and patience, it has peculiar merits, though there have been some notable instances in which these good qualities have failed. Is it not recorded for our warning how 'John, son to King Henry, and Fulco fell at variance at chesses, and John brake Fulco's hed with the chess-borde; and then Fulco gave him such a blow that had almost killed him;' and in another chronicle how 'William the Conqueror in his younger yeares playing at chesse with the Prince of France, losing a mate, knocked the chesseboard about his pate, which was a cause afterwards of much enmity between them.'

Nor are examples lacking of the abuse of patience. The same authority who has written of the fiery Fulco gives us the following account: 'There is a story of two persons of distinction—the one lived at Madrid, the other at Rome—who played a game of chess at that distance. They began when young, and though they both lived to a very old age, yet the game was not finished. One of them dying, appointed his executor to go on with the game. Their method was: each don kept a chessboard, with the pieces ranged in exact order, in their respective closets at Madrid and Rome; and having agreed who should move first, the don informs his playfellow by letter that he has moved his King's pawn two moves; the courier speedily returns, and advises his antagonist that, the minute after he had the honour to receive this, he likewise moved his King's pawn two paces; and so they went on.' It would doubtless have turned the brain of either of these two worthy dons if they could have been present on any of the occasions in recent times when a game has been begun and finished by telegraph between places far apart in the course of a few hours.

In conclusion, let us lay before our readers some words of excellent advice published by one Arthur Saul, two hundred years ago, which all chess-players may profitably lay to heart: 'Do not at no time that thou playest at this game stand singing, whistling, knocking, or tinkering, whereby to disturb the minde of thine adversary and hinder his projects; neither keepe thou a-calling on him to playe, or a-showing of much dislike that hee playeth not fast enough; remembering with thyselfe that besides that this is a silent game, when thy turne is to play thou wilt take thine owne leasure; and that it is the royall law so to deal with another as thyselfe wouldst be dealt withall.'

## RICHARD CABLE,

THE LIGHTSHIPMAN.

CHAPTER LI.—ISHTAR.

RICHARD CABLE reascended the stairs unheard and unseen. He was irritated at what he had observed. 'How proud she is!' he said. 'There is no breaking her stubborn spirit. She does this to pay me for her carriage.'

It is a curious fact that we are prone to note and condemn in others the vice that mars our own selves. We are always keen-sighted with respect to the mote in our brother's eye, especially when it is a chip off the beam in our own eye.

I have known a woman, who was a mischief-maker with her tongue throughout a neighbourhood, declare that of all things she abhorred was gossip, and that, therefore, she avoided so-and-so as a scandal-monger. The conceited man turns up his already cocked nose at another prig; and the talker is impatient of the love of chatter in his friend. I once knew two exceedingly talkative men who monopolised the whole conversation at table. The one invited the other to make a walking expedition with him of a month; but they returned in three days. 'I could not stand B,' said A; 'I was stunned with his tongue.'—'I refused to go on with A,' said B; 'he talked me lame.' The girl who sings flat, criticises the lack of tune in a companion; and the man who paints badly is the first to detect the blemishes in another's picture; and I am quite sure my most severe critics will be those who have written the worst novels.

Richard Cable was convinced that Josephine was proud and self-willed; and everything she did, every act of submission, every gentle appeal for forgiveness, was viewed by him through the distorted medium of his own pride. Indistinctly, he perceived that she was asking him to be received back on his terms—that she was ready to make every sacrifice for this end; but he could not or would not believe that she was acting from any other motive than caprice. Her pride was hurt because he had left her, and she sought to recover him, not because she cared for him, certainly not because she would be more considerate of him, but to salve over her wounded self-love.

An uneducated man, when he gets an idea into his head, will not let it go. He hugs it, as the Spartan lad hugged the fox though it bit into his vitals. There is no rotation of crops in his brain. The idea once planted there, grows and spreads, and eats up all the nutriment, and overshadows the whole surface, and allows nothing to grow under it, like the beech, which poisons the soil beneath its shadow with its dead leaves and mast cases. A man who has undergone culture puts into his head one idea, and as soon as it is ripe, reaps and garners it, ploughs up the soil, puts in another of a different nature—never lets his brain be idle, and never gives it up permanently to one idea or set of ideas. Or rather—his head is an allotment garden, in which no single idea occupies the entire field, but every lobe is used for a different crop, precisely as in an allotment every variety of vegetable is grown.

Now, Richard Cable had had the idea of Josephine's haughtiness so ploughed into his mind that he could harbour no other idea. It grew and spread like a weed, and poisoned the soil of his mind, so that no wholesome plants, no sweet herbs could flourish there. It overmastered, it outgrew, it strangled all the fragrant and nutritious plants that once occupied that garden-plot. Its roots ran like those of an ash through every portion, and spread over the entire subsoil, that nothing else could grow there, or could only grow in a stunted and starved condition. So, with singular perversity, Cable resented the conduct of Josephine in cleaning his boots, and he attributed her act to unworthy motives. He said not a word about his boots till the van was in motion

and he started up the steep hill; then he exclaimed: 'Whatever have these folk at the inn been about with my boots, that they shine like those of a dancing-master?' Then he went through a puddle, and came out with them tarnished and begrimed. He did not look round at Josephine, who made no remark, but next morning cleaned his boots again. After that, Cable kept them in his bedroom. He would not have them cleaned by Josephine.

All the calves were disposed of before Launceston was reached; and as the load was light, the horse rattled on with the van at a better rate. When they drew near to St Kerian, Cable said: 'I have written beforehand to my mother and told her my intentions. She will have arranged lodgings for you, where you may stay on your arrival. After that, as you are wilful, you must suit yourself; but I could not drop you from the van in the street with nowhere to go to. Even the calves are not treated thus; each goes to its allotted cowhouse. I have told my mother to engage the lodging as for an acquaintance of hers—acquaintance, understand, not friend—and to pay a month in advance.'

'That,' said Josephine, 'I will not allow.' She opened her purse. 'What has been spent, I will refund.'

'I do not know what the sum is,' said Cable angrily. 'I insist on paying this. Afterwards, pay as you will.'

'I will not allow it,' said Josephine vehemently. 'No; indeed, indeed, I will not. If you choose to acknowledge me then, I will take anything from you, and be thankful for every crumb of bread and drop of water; but if you will not, then I will set my teeth and lips, and not a crumb of bread or drop of water of your providing shall pass between them.'

'Yourself—yourself still; wilful, defiant, proud!' he said, with a frown and a furtive glance at her over his shoulder. Then he shouted rather than spoke: 'Why will you not enjoy the estate and money bequeathed to you? It is yours; no one will dispute it with you.'

'I will not touch it,' answered Josephine, 'because I have no right to it.'

'You have every right: it was left to you.'

'But it ought never to have come to me. It was properly, justly, yours.'

'I will not have it!' shouted Richard. 'You know that. I am too proud to take it.'

'And I also; I am too proud to take it.'

'We are both proud, are we? Flint and steel, we strike, and the sparks fly. It will be ever so—strike, strike, and the sparks fly.'

'When I reach St Kerian,' said Josephine, 'I suppose, if you continue in this unforgiving mind, I shall see nothing of you?'

'Nothing.'

'It is hard to put me there alone, without friends, a stranger.'

'I came there a stranger, and have now no friends there.'

'But you have your children. With them you need no outsiders; but I am quite alone. You will let me see the dear little ones?'

'No,' he answered; 'I will not let them come near you, lest they take the infection.'

'Richard,' said Josephine very sadly, and in a low despondent voice, 'it seems to me that we

have exactly altered our positions; I was once full of cruel speeches and unkind acts, and you bore them with singular patience. Now, it is you who are cruel and unkind, and I do not cry out, though you cause me great pain.'

He did not answer her; but he said: 'I will not be seen driving you into St Kerian, as I would not be seen driving you out of Exeter. You shall get out at this next inn. It is respectable and clean. You shall stay the night there, and to-morrow come on with the carrier's wagon.'

'Will there be no one to receive me and show me where I am to go? O Richard! you are treating me very cruelly.'

'I am treating you as you deserve,' he answered. 'My mother shall await your arrival and show you to your lodging.'

He drew up before the tavern, that stood by itself where roads crossed. He took down her box and then something else from the inside of the van.

'What is this?' asked Josephine. 'It is not mine; but it has "Cornellis, passenger, St Kerian" on it; and—it looks like a sewing-machine.'

'It is a sewing-machine.'

She stood and looked at him. 'You mean it as a present for me. You bought it in Launceston, because I said I would work as a dress-maker and so earn my livelihood.—No; I will not take anything you give me: send it back.'

He stamped with impatience. 'How perverse and proud you are!—You do not alter; you are always the same. I do not give you the sewing-machine. My poor little crippled Bessie shall give it you. Each of my children has a savings-bank book, and for every journey I make, some of the profits go into their little stores. Bessie shall pay for the sewing-machine out of her money. It shall be withdrawn from the bank for the purpose.—Will that content you?'

Josephine thought a moment, and then, raising her great full eyes on him, she said: 'Yes; I will take it from Bessie.—Richard! if, as you assert, I was the cause of her being injured, yet I am very sure her gentle little heart bears me no malice. You have told her that I crippled her, you have taught her to hate me!—'

'No,' answered Cable hurriedly; 'I have not spoken of you, not uttered your name since I left Hanford. The children have forgotten your existence.'

'Let little Bessie come to me and I will tell her all. I will take to myself the full blame, and then—she will put her dear arms round my neck and kiss me and forgive me. But you!—'

'But I,' interrupted Cable, 'am not a child. Bessie does not know the consequences, cannot measure the full amount of injury done her. If she could, she would never, never forgive you; no!—he broke his stick in his vehemence—'never! If she had a head to understand, she would say: "There are hours every day that I suffer pain. I cannot sleep at night because of my back. That woman is the cause. I cannot run about and play with my sisters. That woman did it. I shall grow up deformed, and people will turn and laugh at me, and rude children point at and mock me. That woman brought this upon me. I shall see my sisters as young maidens, beautiful and admired, only I shall not be

admired. That woman is the cause. I shall love with all the fire of my heart, that grows whilst my body remains stunted, my woman's heart in a child's frame—but no one will love me; he whom I love will turn from me in disgust and take another in his arms. I owe that also to this woman."—If she foresaw all this, would Bessie forgive you and love you, and put her arms about you and kiss you? No; she would get up on her knees on your lap and beat your two great eyes with her little fists till you could not see out of them any more, but wept out of them brine and blood.' Then he mounted the driver's seat in front of his van, lashed the horse, and left her standing in the road before the inn with her box and the sewing-machine.

Thereupon, a strong temptation arose and beset Josephine. Why should she go on to St Kerian?—why sojourn there as a stranger, ignored by her own husband? Why should she bow to a life of privation of the most trying kind, intellectual privation, if nothing was to be gained by it? She had reached the first shelf in her plunge, and the golden cup was not there. Now, she was diving to a second and lower shelf, and she saw no prospect of retrieving what she sought on it. The shelf on which she had first lodged was in shallow water, within the light of the sun; it was not so far removed from the social and spiritual life of the cultured class to which she belonged, as that into which she was now called to descend. On that other shelf there was ebb and flow, and now and then she could enjoy the society of her social equals, if not to converse with them, to hear their cultured voices, see their ease of manner, and enjoy the thousand little amenities of civilisation which hang about the mansion of a lady of position. She had been there as a mermaid belonging to both regions, half lady, half servant; and very unpleasant, not to say repugnant to her cultured instincts and moral sense, as she had found the lower element which had half engirdled her, there was still an upper region in which she could breathe. Now she was to be wholly submerged, to go down to the depth where only the unlettered and undisciplined swim, where only broad dialect is spoken, coarse manners are in vogue, and life is without any of the polish and adornment found in the world above the water-line. In the upper air, when she floated, she could hear the birds sing and see the flowers, and smell the fragrance of the clover and bean fields; below, she would hear nothing but strident tones, see nothing but forms uncouth, smell nothing but what is rank. Why should she make this second plunge? Why—when she clearly saw that on this lower platform the golden goblet did not lie? Would it be a final leap? Would it necessitate a further descent into gulfs of darkness and horror? No; hardly that. Intellectually, there was no further dive. She could hardly find a voice below the ledge of the unreasoning, unread, untrained. Below that was the abyss of moral defect, into which she could not fall.

In the old Assyrian poem of *Ishtar*, the goddess is represented descending through several houses into Hades, and as she approaches each, the gatekeepers divest her of some of her clothing, till she reaches Abaddon, where she is denuded of everything. Josephine was something like *Ishtar*—she was forced in her downward pilgrimage, at

every mansion of the nether world, to lay aside some of her ornaments acquired above. She had set forth with her mind richly clothed; she was a refined and accomplished girl, passionately fond of music, with a delicate artistic taste, a love of literature, and an eager mind for the revelations of science. If she had an interest that came second to music, it was love of history—that faculty which, like music and colour, is inherent in some, is wholly deficient in others. To some, the present is but a cut flower, of fleeting charm, unless it have its root in the past, when at once it acquires interest, and is tenderly watched and cultivated. The historic faculty is closely allied to the imagination. It peoples a solitude with forms of beauty and interest; it builds up walls, and unrolls before the fancy the volume of time, full of pictures. The possessor of these gifts is never alone, for the past is always about him, a past so infinitely purer and better than the present, because sublimated in the crucible of the mind.

Now, what struck Josephine above everything in the under-water world into which she stepped was the inability of its denizens to appreciate what is historical. They seemed to her like people who have no perspective, like half-blind men, who see men as trees walking. They had no clear ideas as to time or as to distance. Brussels and Pekin, foreign cities about equidistant, and Iceland and Tierra del Fuego, foreign islands in the same hemisphere. The Romans built the village churches; but whether the classic Romans or the Roman Catholics, was not at all known: nor was it certain when Oliver Cromwell stabled his horses in the churches, whether in the time of the Romans, or in the Chartist rows; neither whether Oliver Cromwell were a French republican or an Irish papist. Turkeys came of course from Turkey, of which, probably, Dorking is the capital, because thence came also some big fowls; and necessarily Jerusalem artichokes are derived from the holy city, or else why are they called Jerusalem artichokes? In literature it was the same. Below the water, the denizens had heard of Shakspeare, but didn't think much of him; he didn't come near Miss Braddon. Swift—yes, he wrote children's stories—*Gulliver's Travels* and the *Robins*. Thackeray! he was nowhere—not fit to hold a candle to Mrs Henry Wood; there were no murders in his tales. In this subaqueous world, music was not; if there had been stillness, it would have been well; but in place of the exquisite creations of the great tone masters, sprang a fungoid, scabrous growth of comic song, *Villikens and his Dinah*, *Pop goes the Weasel*, and revivalist hymns. Josephine in descending so low left behind her everything that to her made life worth having. She must cast aside her books, lay down her music, her painting; and be cut away from all communion with the class in which all the roots of her inner life were planted. Was she called on to do this? What would come of the venture?

But then came another question: Could she go back? To Hanford Hall and to her father? No; she had taken her course with full determination of pursuing it to the end. She would not return. She must follow what her heart told her was the right thing to do, at whatever cost to herself. Ishtar would lay aside every adornment, only not the pure white robe of her moral dignity.

Before the last house, she would stand and wait, and not tap at that door, wait, and lie down there and die, rather than return except at the call of Richard.

#### CHAPTER LII.—THE SECOND SHELF.

Mrs Cable was waiting before the door of the St Kerian inn, where hung the sign of the *Silver Bowl*, when Josephine arrived. She received her with stately gravity and some coldness. The old woman saw that her daughter-in-law was greatly altered. Her girlishness was gone; womanhood had set in, stamping and characterising her features. She was thin and pale, and did not look strong.

Mrs Cable led her to the village grocer and postmistress, a Miss Penruddock, and showed Josephine a couple of neat plain rooms, one above-stairs, a bedroom, and the other below as a sitting-room. Everything was scrupulously clean; the walls were whitewashed, the bed and window furniture white, the china white, and the deal boards of the floor scrubbed as white as they could be got. Josephine's box was moved upstairs, and the sewing-machine put in the parlour below. Her landlady was in and out for some little while, to make sure that all was comfortable, till the sorting-time for the letters engaged her in the shop. The atmosphere of the house was impregnated with the odour of soap, tea, and candles—a wholesome and not unpleasant savour.

Bessie Cable remained standing in the bedroom; her tall form looked unnaturally tall in the low room, of which the white ceiling was only seven feet above the white floor. 'Is there anything further you require?' she asked. 'I promised my son that I would see that you were supplied with every requisite.'

Josephine looked at her, and drew beseechingly towards her, with her arms out, pleading to be taken to the old woman's heart. But Bessie Cable's first thought was for her son, and she could not show tenderness where he refused recognition.

'I am sorry to receive you thus,' said Mrs Cable; 'but I cannot forget how that you have embittered my son's life, not only to himself, but also to me, his mother. I had looked forward to a peaceful old age, with him happy, after the storms and sorrows of a rough life. But he shipwrecked his peace and mine when he took you. I daresay you are repentant; the rector told me as much; but the wrong done remains working. One year's seeds make five years' weeds, and the weeds are growing out of the sowing of your cruel lips.'

'You also!' cried Josephine.—'Is no one to be kind to me—all to reproach me?'

'You must make friends here.'

'But you—will you not be my mother, and my friend?'

'Your mother—no. Your friend!—not openly. That I cannot be, because of my son; but I will not refuse you an inner friendship. I believe that now you intend to do right, and that you have acted well in coming here.'

'You think so?'

'Yes; I am sure you have. You could in no other way have shown that you wished to undo the past.'

'I am glad you say that; oh, I am glad! Yesterday, I had a terrible moment of struggle; I was almost about to go away, and not come on here. Now you have repaid me for my fight by these words.'

Bessie looked steadily and searchingly at her. 'I have had years of waiting for what could never come. I had ever an anguish at my heart, like a cancer eating it out. But that is over. It was torn out by the roots in one hour of great struggle and pain, and since then I have been at ease within. You have now your pain. Mine was different from yours. Mine grew out of a blow dealt me. Yours comes because you have dealt blows. There is nothing for it but to bear the pain and wait. Some day the pain will be over; but how it will be taken away, God only knows. I thought that mine would never go; but it went, and went suddenly, and I have felt nothing since. No medicine can heal you—only patience. Wait and suffer; and in God's good time and in His way, the pain will be taken away.'

Josephine suddenly caught the old woman's hand and kissed it.

'Do not—do not!' exclaimed Bessie, as if frightened.

'O Mrs Cable,' said Josephine, 'I will wait.—And now, tell me another thing. I have said that I will receive nothing of Richard till he will acknowledge me. I know I have acted very wrongly, but I think he is too unforgiving.'

'It is not for me to judge my son or to hear any words of condemnation from you.'

'I do not wish to condemn him; but I feel that his justice is prevailing over his mercy.'

'Who hardened him?'

'I—I did it; and I am reaping what I sowed. I own that. But, as he will not receive me, will not season anything he offers me with love, am I wrong to refuse to accept aught of him?'

Mrs Cable did not answer immediately, but presently she said: 'No—you do right. I did the same. I would not touch anything; but then my case was different; I was the wronged, not the wrongdoer.'

'More the reason that I should refuse,' said Josephine with vehemence.

Again Mrs Cable considered; then said: 'Yes, that stands to reason; the wrongdoer gives to the wronged one to expiate the wrong, the wrongdoer does not receive from the one wronged—that would aggravate the offence.'

'I am glad you see this,' said Josephine.—'Now—what have you paid for my lodgings? He said you had given a month's rent in advance.'

Mrs Cable coloured. 'You shall not pay that; indeed, you shall not. I engaged the rooms.'

'Because he asked you. I will not stand in his debt.'

'I cannot receive money from you,' exclaimed Mrs Cable. 'It would burn my fingers.'

Then Josephine knelt by her box and opened it. 'We will come to an agreement another way,' she said. 'There is something in the bottom of my trunk—the only poor remains of my finery I have brought with me. You shall take that, and some day it can be cut up or adapted for Mary. Perhaps Mary may be married—and then she shall have my old wedding dress.

I brought it from Hanford with me, not that I intended ever again to wear it, but it served me as a remembrancer. In it I was married, and in it I gave the last offence to my husband. In it I gained him, and in it I lost him. But I shall require it now no more. Take it, and do with it what you like. The silk is very good; it was a costly dress. Richard is building a new house; the driver pointed it out to me as I came along—do not think he had any notion how nearly I was interested in it. He said that Richard Cable came poor to the place, and will soon be the wealthiest man in it. When he has his grand new house, his little girls must dress well as little ladies; and Mary, when she is married from it, may wear my wedding dress. I trust she will be happier than I have been or am likely to be.' She looked up from the box. How large her eyes were, full of expression and intelligence—beautiful eyes, and now looking unusually bright and large because she was tired and thin and sunken about the sockets of the eyes.

'Have you been unwell?' asked Mrs Cable.

'No—only unhappy.'

'It takes a great deal of unhappiness to kill,' said Bessie meditatively. 'I thought sometimes I could not live, so great were my sorrow and shame.'

'I do not care much whether I live or die,' said Josephine. 'Life is very full of trouble and disappointment, of humiliation and self-reproach to me.'—Then, in an altered voice: 'Will you take the dress?'

'Yes,' answered Mrs Cable, still studying her face—'yes—Josephine.'

A smile played over the face of the still kneeling girl. 'It does me good to hear my Christian name again,' she said. 'At Bewdley, I was only "Cable." I should be thankful now for Jösscaphine, though once I scorned to be so named.' She replaced her clothes in the trunk and laid the white silk dress on the bed.

'What is that? That is one of Richard's old handkerchiefs,' said Mrs Cable.

'Yes,' answered Josephine, lowering her head. 'I found it in the cottage after you were all gone. I will do up the dress in it, if you will promise to let me have the old blue handkerchief again. I—I value it. I once laughed at it—just as I laughed at my name pronounced incorrectly, and at his boots; and now—it is otherwise. I value the handkerchief; let me have it again.'

Then Mrs Cable took Josephine's head between her hands and drew it towards her; then checked herself, and thrust her off, and said: 'I cannot, till my son acknowledges you; it would not be just to him.'

Josephine sighed. The colour had fluttered to her cheek and her eyes had laughed; and now the colour faded and the laugh went out of her eyes. 'Am I not to see the children?' she asked.

'I cannot forbid you seeing them,' answered Bessie Cable; 'but you are not to make their acquaintance and be friendly with them. You shall make them all a new set of gowns and frocks; you shall have their old ones as patterns, but must make them a size larger, as the children are growing—that is, all but Bessie. I suppose that the dresses will have to be fitted; then you may touch them and speak to them; but you

must not kiss them or be friendly with them. Speak to them only about the fit of their clothes.'

'I am very hardly treated,' said Josephine.

'You must consider—you have brought it on yourself.'

'Yes, I have done that, and I must bear my pain.—I shall see little or nothing of Richard?'

'Little or nothing, and he will not speak to you. He is away a great deal now. We see him only at intervals; and when he is at home, he wishes to be left undisturbed with his children.' Then, once more, Mrs Cable asked if Josephine had all that she needed; and left, with the white silk dress tied up in Richard's blue handkerchief, when assured that nothing further was required except that which she was not empowered to give.

### THE 'B. M.' NEWSPAPER ROOM.

THE new Newspaper Room, or 'White' wing, which has been recently added to the library of the British Museum, and which also includes additional accommodation for the departments of Prints and Drawings, and Manuscripts, is one with which, perhaps, the outside public ought to be made better acquainted. To regular 'readers' its advantages are at once apparent. In the present circular reading-room, erected in 1857, and without doubt the finest room of its kind in the world, it was, previous to the erection of the present Newspaper Room, a most formidable task to consult, say, a one or two years' file of a daily London or provincial newspaper. Now, however, this is all altered; and with specially constructed tables and desks, and with ease and quickness of supply, an immense saving of time and trouble has been effected.

The new wing is situated at the south-east side of the main building, on ground that was formerly occupied by the garden attached to the official residence of the principal librarian. It has its principal front in Montague Street; and in the solid and imposing style of its architecture, it harmonises perfectly with the character of the main building. The dimensions of this front are a hundred and twenty feet long, and forty feet in height. Two sides are then carried westward to the walls of the old building. The fronts are of stone; while the walls looking into the open court enclosed between the north and south sides are of glazed bricks, which secure abundance of light to the rooms looking out into it. The entrance for readers is through the Grenville Library, on the right of the great hall, at its conjunction with the King's Library.

The building consists of four separate floors—the basement, which is well lighted from without; a ground-floor; a mezzanine or middle-floor; and above this, a gallery lighted from the roof. The disposition of the additional space thus acquired by the trustees is at present somewhat as follows: The basement and the ground-floor on the north side are devoted to the present and continually increasing collection of newspapers published in Great Britain and Ireland, which has of late years entirely outgrown the limited space formerly allotted to it in the basement of the circular reading-room. The ground and mezzanine floors on the south side are given up to the department

of Manuscripts, and afford every accommodation for the officials, and rooms for consulting special and valuable manuscripts; and for the collation of texts, facilities of a greatly superior kind to those which formerly existed have been provided. The mezzanine floors on the front and north sides are devoted to the department of Prints and Drawings, popularly known as the Print Room, which has only now acquired proper accommodation and convenient exhibition rooms for the valuable art treasures it contains. Finally, it is intended to utilise the south section of the sky-lighted gallery for the occasional display of the several collections of works of art in glass, pottery, and porcelain.

The foundation stone of this important addition to the British Museum was laid by Dr Edward A. Bond, C.B., the principal librarian, on Saturday, September 23, 1882; and the operation of building, &c. occupied a period of nearly four years. The work has been executed, as was to be expected, in the most approved and substantial style, and every modern improvement has been introduced. The entire building is, as far as possible, fireproof, and constructed with iron girders and concrete floors. The wall-scotings are of oak, and the floors of pitch-pine. The cost of erecting the new building has been defrayed out of money bequeathed to the trustees, so long ago as 1823, by Mr William White, a gentleman who formerly resided in Tavistock Square, and who, at his death, left them the reversion of a sum of £63,941, to be used at their discretion, but apparently with a hope that it might be expended on an extension of the Museum buildings. After making provision for his son, the testator left his real estate and the residue of his personal estate 'unto the governors for the time of that national institution, the British Museum. For from the nation my property came, and when I leave my son enough to be a farmer, he has that which may make him as happy and respectable as he would be in any station.' A life-interest in the legacy was, however, left to the testator's widow, which Mrs White survived to enjoy until the year 1879. The sum which fell to the trustees was then, by probate and other duties, reduced to £57,572. Of this sum, some eleven thousand pounds were laid out in the erection of a new Sculpture Gallery between the Elgin and Assyrian Galleries: four thousand pounds were judiciously expended in the erection of sheds in the inner quadrangle for the reception of sculptures previously housed under the colonnade of the front façade, and in the re-arrangement of the boilers, the construction of a new boiler-house, and generally in improving the ventilating and heating apparatus throughout the entire building. The remainder of the money was devoted to the erection of the Newspaper and other rooms just described. An inscription runs along the frieze on the principal front in Montague Street: 'Erected from Funds bequeathed to the BRITISH MUSEUM by WILLIAM WHITE, A.D. MDCCCLXXXIII.'; and it is interesting to notice the exact words used by Mr White in his will: they are as follows.—'The money and property so bequeathed to the British Museum I wish to be employed in building or improving upon the said institution; and that round the frieze of some part of such building, or, if

this money is otherwise employed, then over or upon that which has so employed it, the words "GUILLELMUS WHITE ARM. Britannicæ dieavit 18—" be carved, or words to that import. It is a little vanity of no harm, and may tempt others to follow my example, in thinking more of the nation and less of themselves.' The sentiments thus expressed may well be commended to the consideration of those who have more riches to leave behind them than proper ways of fitly disposing of them. There are certainly not many ways of better obtaining a desirable immortality at so cheap a price as the endowing or building of a public library or an educational institution.

The various departments of the new building enumerated above are now in full working order, and available to readers daily as follows: May to August, till six P.M.; March, April, September, and October, till five P.M.; November to February, till four P.M. If, however, a reader should desire to peruse a volume of newspapers or of parliamentary Reports—which are also now in the new room—he has simply to notify the fact to the superintendent, and at closing-time the volume desired will be sent into the large reading-room, where the reader can have it at his disposal till eight o'clock in the winter months, and seven o'clock during summer.

As the reader passes through the corridor leading to the Newspaper Room, an attendant outside rings a bell, and he is confronted by an official, who inquires what papers are wanted. In a very brief space of time the volumes are laid before him, and a ticket taken for each, which is retained entirely. Not a moment is thus lost; and as the tables are fitted with the most approved desks or supports, writing materials, and other necessities, the reader can start work almost instantly. Of course, as under the old rules, only bound volumes of newspapers are available, so that, so far as weekly or provincial journals are concerned, they can only be had in yearly or half-yearly volumes. London and provincial daily journals, however, are generally bound up in two-monthly volumes, and are therefore more readily available.

## THE OLD WAY AND THE NEW.

### CHAPTER II.

It was not without some natural regret that Abel removed to his new quarters, and vacated the humble rooms which had been his home for nearly half a century. He and Mary Nunnely at once became firm friends; and for the child Freddy he conceived an almost passionate fondness, as old people frequently do for very young children. As for Mrs Roding, she was all smiles and honeyed words, and seemed as if she could not do enough for 'dear Grandad,' while Matthew continued to go to and from business as soberly and punctually as heretofore. His house was an unpretentious one in a quiet street in Canonbury, so that Grandad was able to spend his evenings as usual at his favourite tavern in the Essex Road. But this state of things was too good to last. It was one of those years when an epidemic of speculation spreads far and wide, seeming to be in the very air men breathe; when the blood of every

one who has money to invest, and of many who have none, goes up to fever-heat; when every day blows its own gorgeous bubble, and no scheme is too rash or improbable to be greedily clutched at; when one bogus Company after another is gaily launched, and, like an argosy with golden sails, floats joyously for a little while over summer seas which are as treacherous as they are sunny. After a time the tornado bursts. One argosy here and there comes safely into port; the rest founders in open sea, and ruin and desolation find their way into ten thousand homes.

It was scarcely to be expected that Matthew Roding, who was a born gambler, should escape the prevailing contagion. His blood simmered; his fingers itched; his sleep was troubled with strange dreams; in his waking hours he saw visions; the fever was upon him. In such piping times there seemed to him no reason why he should not turn his ten thousand pounds into a hundred thousand, or into as many more, for the matter of that. The feast was spread before him; what a fool he would be to stand by and watch others devour it, and he starving meanwhile! His previous experience at Liverpool stood him in good stead. He entered the arena a trained combatant. His first successes served still further to turn his head. Deeper and deeper he plunged: thousands of others were doing the same. He joined the directorate of several new Companies; he even 'promoted' two or three schemes on his own account; in the City he began to be talked about as a rising man. Meanwhile, the business at Bankside was left more and more to take care of itself. He began to hate to go near the place. He took an office in Throgmorton Street on his own account, gorgeous with mahogany and plate-glass. Here, with the assistance of a confidential clerk, he transacted his financial business; and here his new City friends were always sure of finding a magnum of champagne of some famous brand. His sober, somewhat old-fashioned garb was discarded in favour of one much more florid and effective. But of all this not a whisper reached Abel. The old man noticed that his son was gayer in his attire, but that was all; Matthew went and came with the same regularity as heretofore. The first intimation of change burst on him like a thunderclap. It was his daughter-in-law who broke the news to him one morning after breakfast. Matthew had taken a villa at Tulse Hill, and they were going to remove there in a fortnight's time, she told him. He merely said: 'Very well. At my time of life I don't know that it matters greatly where I live.' But in his heart he knew that it did matter.

Abel opened his eyes very wide indeed the first time he went over the new domicile. It was a staring red-brick edifice of fifteen or sixteen rooms, standing a little way back from the road in its own grounds. *Carte blanche* had been given to an eminent furnishing firm to fit it up from garret to basement, and they had not neglected their opportunity. Everything was in strict accordance with the latest canons in such matters, as laid down by the highest—and most expensive—authorities. In the coachhouse, Grandad found a brand-new brougham for the master of the house, and a brand-new victoria for the mistress of the house; and in the stables, two

brand-new horses. He could scarcely believe that he was not walking in a dream. The house had originally been occupied as a Seminary for Young Ladies, and a classroom had been built out at the back, with windows looking into the garden. This out-building had now been divided into two rooms, with a door leading from one to the other, and a side-door opening into the garden. The rooms in question had been fitted up for Grandad's sole use and occupation. A short passage with green baize doors shut them off from the rest of the house.

His daughter-in-law herself introduced him to the rooms. 'Think how cosy and comfortable you will be here, with no one to disturb you or interfere with you,' she said. 'You can come and go just as you like. You can smoke your pipe in the garden all day long. You know I strongly object to the odour of tobacco in the house. And then there is a door at the end of the garden by which you can get out into the lanes and fields at the back. You were always fond of rural rambles, I think. Sarah, the house-maid, will wait upon you and bring you your meals. We shall dine at seven in future; but I know you like your cutlet and pudding not later than half-past one. I have had the furniture brought from your other rooms, because I am sure you are fond of old associations. Nothing has been forgotten that could in any way conduce to your comfort.'

'Nothing—nothing,' said Grandad dryly. Then in a lower tone he muttered: 'Buried alive—buried alive!'

Mrs Roding's sharp ears caught the remark, but she chose to ignore it. Really, old people are often excessively tiresome and difficult to please. As soon as he was left alone, Grandad sat down in his easy-chair; his head sank forward, and he covered his face with his hands. 'Fool—idiot that I have been!' he exclaimed. 'I might have known what would come of it.' He sat thus for a long time, and then he wept, for the first time since he had stood by his wife's grave, more than forty years before.

But next morning he was as brisk and chirpy as ever. Whatever thoughts might be at work in his mind, he kept them to himself. He and Freddy had a romp in the garden after breakfast, and then, towards noon, Grandad, with hat and coat elaborately brushed, sallied forth, and hailed the first 'bus that was bound for London Bridge. How his heart warmed when he found himself in the Borough High Street! He had not been there since he retired from business. How strange everything looked, and yet how familiar! Quitting the 'bus at the bridge foot, he walked through the Market, where the salesmen had not yet forgotten him, but touched their hats and bade him good-morrow, as in days gone by. The old man's heart swelled within him. His errand to-day took him to a certain humble chophouse in an obscure street off Bank-side, where he knew that within five minutes more or less of a certain time he would not fail to find the person of whom he had come in search. The individual in question was Peter Bunker, his old and faithful clerk and bookkeeper, who had been in the service of the firm for upwards of forty years. And there of a surety he found Peter, in one of the little partitioned-off boxes in

which he dined six days out of seven, year in and year out. He was a little, prim, closely shaved man, about fifty-five years of age, with the deferential manners of one who all his life has filled a subordinate post and has no expectation of ever filling any other. He started to his feet with wide-open mouth when he saw Abel's tall, gaunt figure enter through the swing-doors and advance along the narrow aisle with its sanded floor, peering keenly from side to side as he did so. 'Mr Roding—sir!' was all the little man could gasp as their eyes met.

Abel's hand went out and gave the other's a grip that brought tears into his eyes. 'It's such a fine day, Bunker, that I thought I would drop in and have a chop-and-mashed with you,' he said cheerily. 'I knew to a tick when to find you here. I don't know whether you or St George's keeps better time.'

Little more was said till Abel had finished his chop. Bunker surmised that there must be some good reason for his old master's visit, but could only wait till he should be told what it was. 'And now we will walk as far as Bilbo's and see whether he has any of his famous old port left. You must steal an hour from business this afternoon, Bunker, in memory of old times.'

So to Bilbo's they adjourned, which was no great distance away. There they found a quiet corner where they could talk without being overheard. Then was Bunker duly enlightened as to the reason of Abel's visit, which was simply to obtain from the old clerk a trustworthy account of the present condition of the firm and business matters generally, now that a year had elapsed since the reins of power had been transferred to other hands. The story told was one that might well have moved Grandad to the depths of his being. Whether it did so or not, Bunker had no means of knowing, for his auditor was one of those men who may be touched to the quick without betraying it either by word or look. He sat and listened to Bunker's recital as quietly as though it were the most matter-of-fact narrative in the world. He sipped his wine in a leisurely way, now and then interjecting a quiet 'Oh, indeed,' or 'Just so,' with an occasional question to elucidate some particular point; but for the most part listening in silence, with eyes that were half veiled under their shaggy brows.

After that first occasion, Abel made a point of seeking an interview with Bunker once a month; of those meetings no mention was made to Matthew. Grandad went quietly on his way, seeming to see and know nothing, and becoming day by day more of a nonentity in the establishment at Tulse Hill. Nearly all his meals were now taken alone in his own rooms, except when he could smuggle Freddy and Mary in to tea on those afternoons when Mrs Roding happened to be out shopping or visiting. Often a week would pass without he and his son setting eyes on each other. His daughter-in-law had succeeded to admiration in her scheme for isolating him from the rest of the household. On Sunday, however, Matthew always made a point of sitting for half an hour with his father. On these occasions, no mention of business matters ever passed between the two; their talk was confined to the leading

questions of the day, for of late, since he had so much time on his hands, Abel had become a great newspaper reader. No hint ever passed his lips that he had the slightest knowledge of anything respecting which he was supposed to know nothing. So month passed after month, and, if it were possible, Grandad became more than ever a cipher in the household; while Matthew Roding, like a swimmer buoyed up with bladders which a pin-prick may at any moment cause to collapse, ventured farther and yet farther into the deep waters of speculation, on whose surface the sun still shone and balmy zephyrs played, while no cloud even as big as a man's hand uplifted itself like a menace above the horizon.

And so we come again to Grandad's seventy-second birthday, and to Ruff Roding and Mary, whom we left so long ago walking together in the direction of the post-office.

'Why is it such a lucky thing that we have met this morning?' asked Mary for the second time.

'Because, as you may or may not chance to know, this is dear old Grandad's birthday, and I have made up my mind, despite both my father and my charming stepmother, to spend it with him. When I nearly fell into your arms just now, I was puzzling my brains as to how I should be able to obtain access to the enchanted castle without the ogress who has laid such a ban on me having the slightest suspicion that I was there. Happily, you have solved the difficulty for me.'

'Expliquez-vous, monsieur.'

'As soon as you get back to the house, you must see Grandad and tell him that I am coming. Then, when the coast is clear and nobody about, either you or he must unlock the door at the bottom of the garden that opens into the lane, and there you are—don't you see?'

'The audacity of young men, of painters especially'—

'Is something that surpasses belief.'

'Mrs Roding will be sure to hear of it through one channel or another.'

'I don't care a rush if she does—after it's over. I've a right to visit my grandfather, especially on his birthday, and no one shall hinder me from doing so. A parcel addressed to him will be left at the house in the course of an hour or so. It's only a game-pie and one or two other trifles. We shall be as jolly as sand-boys.—But oh, Mary, my darling, do—do contrive somehow to dine with Grandad and me! Tell a whopper for once. Say you want to go somewhere—shopping, or anything—then go out as usual; and I'll let you in ten minutes later through the garden door.'

Mary shook her pretty head. 'Indeed, sir, I shall do nothing of the kind, not even for the honour of dining with you.—Perhaps, if Grandad were to ask Mrs Roding'—

'I'll get the old boy to do it. She can't be such a curmudgeon as to refuse him on his birthday.—You don't ask me what I've got in the parcel under my arm.'

'I was always taught that little girls should never ask questions.'

'That doesn't keep you from being inquisitive; so, to save you from dying of curiosity, I'll tell you. It's a little water-colour sketch I've

done, as a birthday present to Grandad, of an old water-mill close to where he was born. I've heard him say that when he was a boy he would stand by the hour watching the slowly turning wheel and the white flashing water; and whenever he goes down to Cumberland he never fails to visit the old mill.'

'He will be delighted with it. It will make him feel that he is not quite forgotten.'

'Dear old boy! I wouldn't for the world have him feel that he is neglected.—But I've something else to tell you. As the gourmands are said to do, I've kept my *bonne bouche* till the last. I've good news, my pretty one—great news—glorious news! "Special edition." Can't you guess what it is?'

Mary turned a face to him that blushed, and paled, and then blushed again. 'You've not'—she said, and then stopped.

'Yes, I have,' he laughed. 'That's just it.'

'You've not sold your picture, Ruff!' she gasped.

'Haven't I, though! But I have, and got a commission for another into the bargain. An American millionaire—a splendid fellow.—No haggling; cash on the nail.—Molly, my darling, we'll be wed in six months from to-day, or my name's not Ruff Roding. Rum-ti-tum-tootle!'

If they had happened to be anywhere but in the public street, he would have taken her in his arms and kissed her then and there.

#### RABBIT CRUSADING.

MANY of our readers will probably have heard and read much about the ravages of poor 'bunny' upon the sheep-runs of New Zealand, Victoria, and other colonies; but some particulars of the manner in which 'the pest' has been dealt with with a view to its suppression may prove readable. Let us then endeavour to give some description of a rabbit-war, so to speak, of which we had some experience. The work was carried on upon a run of one hundred thousand acres in the South or Middle Island of New Zealand, which had become so overrun with rabbits that the sheep-flock had been reduced from eighty thousand to forty-five thousand, through the inability of the land to support the larger number, owing to the amount of grass consumed by the rabbits. It is commonly related on the station that, about five years before the time of which we are writing, it was a difficult matter to find a rabbit anywhere on the run, and that the manager once reproved one of his men for taking out a gun to try and shoot one of these animals, saying, that if the rabbits were indiscriminately hunted, it would soon be impossible to get one for dinner. And yet so great was the increase during these succeeding five years, that the owners of the station found the carrying power of their land reduced by nearly one half, and were at their wits' end for a remedy.

Various means were tried for reducing the numbers of the rabbits. Men were engaged to breed ferrets on the run and turn them loose; other men were allowed to camp upon the run and keep large packs of dogs to wage war upon them, and were paid liberally for the skins they

obtained; while others were similarly encouraged to kill them with guns. But notwithstanding all these measures for their suppression, the rabbits continued to increase till their numbers seemed limitless.

In the early days of this trouble, the squatter concerned himself only about the slaughtering of bunny, and paid no heed to the value of the skins. It was the custom to pay those engaged in killing them a certain price, from a penny up to two shillings and sixpence—according to the thickness of the rabbits on the land—for each tail or pair of ears brought into the homestead. In this regard there is a story told of two parties of 'rabbeters' who were engaged upon adjoining runs, on one of which the owner paid for the tails delivered to his storekeeper, while on the other a similar price was paid for the ears. These worthies hit upon the device of meeting at the boundary fence and exchanging ears for tails. Thus, each gang was paid for all the rabbits killed upon both runs, and hence every rabbit killed was paid for twice. This nefarious practice was carried on for some time before the victimised squatters discovered the fraud.

In course of time the value of the skins was recognised; and now millions are shipped annually to the London market, where they command a good price, and are made up by the manufacturers into a large variety of articles of female adornment, such as muffs, capes, trimmings, and the like; besides which, it is said that the skin is tanned and made up into an imitation kid. Besides the common gray rabbit, so well known in England, there are in New Zealand some very pretty varieties. Notably, there is what is known as the 'silver gray.' The fur of this species is a mixture, in varying proportions, of black and white tails. For these, nearly double the price of ordinary skins is paid by the skin-dealers. Besides the silver grays, which are sometimes almost white, and at others nearly black, there are also many pure black rabbits, and a few quite white. There are also in some parts black rabbits with brown spots.

The method of taking and preparing the skins is as follows: the skin (jacket) is taken off without being split up in the usual way. The skinner places his foot upon one hind-leg, and holding the other in his left hand, slits the skin with his knife across from leg to leg; he then disengages the skin from around each hind-leg, and planting his foot upon both of these, pulls the whole skin up over the body of the rabbit, precisely as a footballer takes off his buttonless jersey. The skin is thus turned inside out; and a skilful skinner will, with a sharp pull, unless the rabbit be very old and tough, strip the whole skin, dragging the head and fore-paws through without any further aid from his knife. But in some cases he will have to cut round the neck and fore-paws before he can disengage the hide. The speed with which men and boys who are accustomed to the work can strip bunny of his jacket is almost incredible.

Having taken off the skin, the rabbitier, unless he wants it as food for his dogs, leaves the carcase lying where he found it; and again turning the skin so that the fur side is outward, strings it upon a strap hanging round his neck, or upon his belt, and goes on in search of more spoil.

The methods already spoken of, shooting, and hunting with dogs and ferrets, having proved wholly inadequate to meet the case, other methods had to be sought; and at last the expedient of laying poisoned grain was hit upon. In the direction of poisoning, many experiments were made with different and uncertain results. Carrots prepared with arsenic were used, and are still in great favour in many parts, and both wheat and oats were 'phosphorised,' as the professional rabbiting term goes. At first, the poisoned grain was placed upon the ground indiscriminately in large heaps, with the result that many sheep and cattle ate it and were killed. This seemed to present an insurmountable obstacle to its use; but further experiments led to the plan of putting down the grain in small quantities in each place, not greater than a tea-spoonful, which resulted very successfully. Oats are generally used in preference to wheat. This was the method by which poisoning with phosphorised oats is carried on, as observed by the writer on the station referred to above. Provisions were made for employing twenty-five men constantly for twelve months in laying poison. These, provided with four large tents, measuring ten feet by twelve feet, and under the supervision of the head-shepherd, were set to work upon a carefully devised plan. In these days of 'wire-shepherds,' as they are called—that is, wire-fences—termed wire-shepherds because they take the place in a large degree of shepherds or 'boundary-keepers,' who in the old days had to be employed by the squatters to keep the sheep from straying in far greater numbers than at the present day—a sheep-run is always divided into a number of sections, often several thousands of acres in extent, called 'paddocks.' The 'poisoning gang' would be taken to a convenient camping-place in one of these paddocks and there quartered. A well-sheltered nook would be selected contiguous to a creek, of which there were several on the run, and here the camp would be pitched. The four tents, for which the poles, pegs, and all necessities would be carried from camp to camp, would be set up; quantities of dry fern, reeds, creepers, or grass, as the locality might provide, would then be cut and spread upon the floor for bedding; and on the top of this each man would spread his blankets. To each tent six men were apportioned, four of whom had to lie side by side across the inner half; while the other two lay in like manner, occupying one half of the outer portion.

Now to attempt a description of the method by which bunny was attacked. Let us suppose that it was planned first to poison, say, No. 1 paddock. Some weeks before the war began, the bulk of the flock were turned into this paddock to eat the grass close down, so that the rabbits should have but little choice of food when the poisoning began. Next, the camp was pitched in this No. 1 paddock; and then, the sheep having been moved on to the paddock next intended to be operated upon, work was commenced in earnest. The poisoned oats were prepared at the home station, and sent out to the rabbitiers upon packhorses. At one time, the oats and phosphorus were boiled together in an open vessel; but as the fumes were found to be injurious to the men who superintended the operation, cylindrical boilers with

hermetical covers were contrived revolving upon an axis. These cylinders, lying horizontally between upright stanchions, and turned with a crank, each capable of holding about two sacks of oats, were filled with a mixture of grain, phosphorus, and water in certain proportions. The cover having been sealed up, a fire was lighted beneath the boilers, which were kept slowly revolving while the contents boiled for a certain length of time. The poisoned oats thus prepared having been brought to the scene of operations, the next business was to distribute them for the delectation of poor unsuspecting bunny. For this purpose, each man was provided with a semicircular tin about six inches deep, with a diameter of about eighteen inches. Each tin was fitted with an overarching handle, passing from the centre of the diameter, or flat side of the tin, to the centre of the circumference, or curved side. Through this handle a strap would be rove, by which means the tin could be slung over the shoulder in such a way that the flat side might rest against the bearer's left hip; the semicircular shape being designed for convenience in carrying. Each tin would hold from fifteen to twenty pounds of oats—nearly half a bushel. Each man carried in his right hand a light stick about two feet six inches long, with a piece of tin bent in the shape of a spoon, and about the size of a teaspoon, fastened to one end. Thus accoutred, and with a tin bottle full of tea, and a little bread and meat in a handkerchief, slung to his belt, for the mid-day meal, the rabbit would 'fall in' after breakfast every morning at eight o'clock to begin the day's work.

On completing one paddock, drays would be sent from the home station to transport the whole of the impedimenta to the camping-place in the next, and so on from time to time. Nothing but absolutely perpendicular cliffs, which were sometimes met with, was allowed to divert the line of march. Sometimes the men would be climbing up steep mountain sides, at others picking their way gingerly, at no small risk of breaking their limbs, along the faces of steep sidings and cliffs; and anon they would be crossing creeks or threading their way through clumps of 'bush' (wood). At times, when a piece of country had to be attacked where there was very heavy tussock-grass or scrub, a day or two would be given to 'burning off' before laying the poison.

So much for the business of putting the poison down for the rabbits. Now what about securing the skins? For this purpose, a contract was let to three men, who, in the guise of 'camp-followers,' as they might be termed, followed the rabbiters from place to place. These men were provided with tents and wires for stretching their skins, and were paid by the station owners one-and-sixpence a dozen for all skins brought in properly dried and tied up in dozens. The contractors employed two boys to help them; and all five used to spend the day from early in the morning until nearly dark scouring the country over which the poisoners had passed the day before, and taking the skins from the carcasses. Then, upon their return to camp, they would all have to sit up far into the night stretching and cleaning the spoils of the day.

This gang had to pay the station for its pro-

visions. The collections of skins daily would vary from one hundred and fifty up to three hundred per head, men and boys, according to the abundance of the rabbits in different places. The gatherings would rarely fall short of one hundred and fifty a head, from which it will be seen that these men were earning handsome wages. The writer on one occasion walked six miles, to and from a certain patch of ground that had been poisoned a day or two before (three miles each way), and skinned one hundred and twenty rabbits between breakfast-time and mid-day. The skins collected do not represent all the rabbits killed. Many hundreds die under ground, and numbers are torn to pieces by the hawks and seagulls, which congregate in enormous numbers from all directions upon 'poisoned country.'

From the foregoing, it may be seen what the ravages of the rabbit really mean, though, unfortunately, we have not all the figures at hand necessary for making an accurate statement. But first glancing at the loss to the station in wool through the reduction of its flock from eighty thousand to forty-five thousand sheep, let us review roughly the weekly cost of this rabbit-war alone: Overseer, being the head-shepherd, a 'paid' yearly hand. Twenty-four men at twenty-five shillings each, £30; cook, £1, 15s.; man to prepare poison, £1, 10s.; four packmen at twenty-five shillings each, £5; rations for thirty-one men at seven shillings each, £10, 17s.; oats, say, a bushel and a half per man daily, equal to two hundred and twenty-five bushels at two shillings and sixpence, £28, 2s. 6d.; phosphorus (quantity used and price not known), say, £5; bonus to men for collecting skins—say, three men and two boys collect three hundred each daily—for week, nine thousand, or seven hundred and fifty dozen at one shilling and sixpence, £56, 5s. Thus, roughly speaking, this station was expending weekly £138, 9s. 6d. in protecting itself against loss from the continual increase of the rabbits, which threatened soon to take entire possession of the whole country. From this total have, of course, to be deducted the proceeds of the skins in London, which may be calculated, we think, after allowing for all shipping and home charges, at about two shillings and sixpence per dozen. This would give £93, 15s. to be deducted from £138, 9s. 6d.; leaving a weekly charge upon the station of £44, 14s. 6d. But this, it must be remembered, is a very rough estimate, and is probably a good deal below the actual cost. In allowing a collection of three hundred skins per man and boy daily, we have probably far exceeded the mark; and it will be seen that any material reduction here would alter the figures considerably. Then, again, the estimate of seven shillings per head for rations is probably an under-statement, as is also the item of five pounds for phosphorus. Moreover, no estimate has been made for wear and tear of tents, cooking utensils, horse-flesh, drays, and harness, &c.; nor for wages of men packing, counting, pressing, and carting the skins, and getting firewood and so on.

But enough has been written to show what a serious matter the 'rabbit pest' is to the squatter and to the country; and we trust this paper may prove of some interest to English

readers. It should be mentioned that in Australia the rabbit skins are of no value whatever, because, owing to the warmer climate, they are not so heavily furred as in New Zealand. The ultimate result of the crusade we have endeavoured to describe was highly satisfactory, the run being virtually cleared of rabbits for the time being. Nevertheless, it will be a perpetual charge upon the station to keep them under, as a year or two of neglect would bring about again the same state of things. And this is true of the greater part of the South Island of New Zealand and many parts of Australia. The rabbits are a constant source of anxiety and annoyance, and unflagging vigilance is necessary to keep them in check.

## THE LOST ISLAND.

### A LEGEND OF ORKNEY.

Most people have heard of the Standing Stones of Stennis in Orkney. In a silent circle they stand amid the solitude of the moor, silvered with the lichens of dead centuries. Tourists come and gaze on them, picnic beneath them, and speculate vaguely as to how they came there. Antiquaries also gaze, and proceed to evolve from their inner consciousness some theory to account for the origin of the stones. But the annals of the countryside have no legend of the race which raised them. All over the islands are the vestiges of some busy tribe who dwelt half underground, and have left to the worms and the rats their buried dwellings, known now as 'Brochs.' Yet the strange fact remains, that, while these peoples are utterly forgotten by their successors, the still earlier tribes, who made terrible the islands of old, have left their traces in the popular legends with which the Orcadian children are kept quiet in the long dark winter evenings.

There lies on a moor not very far from Stennis a huge stone, which was flung by a giant in the island of Hoy at his enemy Cubby Ruo, in Rousay, full ten miles off. That stone must have been there for generations before those which have outlasted man's memory at Stennis, and yet the very name of the man through whose quarrel it came there is un forgotten. Cubby Ruo was a bit of an engineer in his way, and determined to raise a connecting mound between his own island of Rousay and the smaller isle known as Wyre or Veira. In the pride of his strength he took too great a load of earth and stones in his creel, stumbled and fell, and lies to this day under the mound which he was carrying.

His island of Rousay seems to have been a favourite haunt of giants, fairies, and supernatural people of all kinds. It is separated from the Mainland of Orkney by a narrow strait, through which runs a furious tide. At certain hours of the day, two tides meet here, and their meeting-place, known as Enhallow Roost, is one wild whirl of foam and leaping spray. In the middle of the roost lies the little green isle of Enhallow.

The name is commonly held to mean 'holy isle,' and to have been given the island from the fact that on it was erected a very early Christian chapel or hermitage. It seems just as probable, however, that the name is derived from Hela, the old Norse goddess of death. Be that as it may, tradition tells that Enhallow was once an invisible island, only appearing amidst the foam of the roost at certain times, and vanishing again before it could be reached by mortal foot. It came to be known in Rousay—how, we have not been able to discover—that if any man seeing Enhallow took iron in his hand and kept his eyes fixed on the island till he landed upon it, he would reclaim it from the sea for ever. This was done at last, and Enhallow has remained visible and tangible ever since.

But for the adventurous there is hope still. Somewhere near Enhallow there lies another island, unseen of men for more years than can be reckoned. This is the story of its last appearance, as told me by a native of Rousay, one who has seen the fairies and heard the wild strange music of the sea-folk.

One day, very many years ago, a young girl went up to the hill opposite Enhallow to cut peats. Her day's work done, she was sitting resting on the heather, when a strange man came up to her. After a little talk, he asked her to go with him; and though she refused at first, he gained such power over her that he made her come. When night came and she did not return, her people became alarmed, and set out to seek for her. High and low the whole island was searched, but no trace found of the missing maiden. The wonder passed away, and matters fell back into their old course. Some time after this, the father and brothers of the lost girl went out to fish. They were somewhat to the west of Enhallow, when a thick fog fell on the sea, so thick they could not tell where they were. At last their boat touched land; and on going ashore, they found themselves, as they thought, upon Enhallow. Going a little inland, however, they found that they were on another island, for they saw a big house before them. On coming up to this house, they found, to their surprise, none other than their lost daughter and sister in the person of the 'good-wife.' She took them in and gave them food, and told them she was married to a 'sea-man' and living with him here. As they were sitting, the door opened, and 'a great brown wisp' came rolling in and went 'ben.' (A 'wisp' is a huge ball of twisted heather-rope, which is used in Orkney for thatching purposes.) In a few minutes a handsome young man came 'but.' He was introduced as the husband of the young woman, and welcomed her friends very kindly. Two more wisps came in while they waited, and from each of them came forth a sea-man, who had been out fishing. When the men had to leave the house, the father asked his daughter to return to Rousay with him; but she refused, saying she was too happy with her husband to leave him. She gave her father, however, a knife, and told him while he kept it his fishing would never fail, and he would be able to visit her whenever he wished. After a tender farewell, the Rousay men pushed off into the mist; but the

old man somehow let the knife slip, and it fell into the sea. In a moment the boat touched land on Rousay; but the island and its mistress have never since been seen.

### HYDROPHOBIA.

Of all the diseases to which man is liable, hydrophobia, the disease which follows consequent upon the bite of a rabid animal, is surely one of the most dreadful. Its associations in our mind are such that the very mention of its name is sufficient to cause an involuntary shudder. There is the sickening and often prolonged uncertainty, after one has been bitten, as to whether the disease will manifest itself or not; and then, when once the symptoms declare themselves, the horrible certainty of a most awful death. Yet, though the deadly characteristics of the disease are so well known, until lately but very little was understood as to its real nature, and as a consequence, there were no means for its certain cure or prevention, once the virus was present in the system. The most erroneous ideas prevailed, and indeed many of them still prevail, with respect to hydrophobia. For instance, it is supposed by many that it is more prevalent in hot than in cold weather; but this is not so, for it is known in the arctic as well as in the torrid regions, though, strange to say, it is not known, so far as can be ascertained, in Australia or New Zealand. Again, the mad dog is not afraid of water, as is often supposed, but would drink if it could: it is the spasms in its throat which prevent its doing so. Then, there was the popular superstition—which seems now, however, to have nearly died out—that if a perfectly healthy dog bit a person and afterwards went mad, the person bitten would also go mad and die. It would be difficult to say how many dogs, quite innocent of any taint of hydrophobia, have been sacrificed to this unreasoning superstition, the natural corollary of which was, that the life of any person bitten by a dog was in danger until that dog had been killed. Gradually, however, these and other kindred errors and misconceptions have been dying out; but it was left to M. Pasteur to discover the much needed means of successfully dealing with hydrophobia; for successful his method must be admitted to be, seeing that he has given such proofs of the efficiency of his treatment, and seeing, too, that these proofs have been tested, and admitted as correct by a Committee appointed by the Local Government Board of this country to inquire into M. Pasteur's treatment of the disease.

M. Pasteur's method of treating hydrophobia is by inoculation, or vaccination, as we may term it. He ascertained that if a healthy animal were inoculated with a portion of the virus taken from the spinal cord of an animal which had died of rabies, it would contract the disease in the same way as though it had been bitten by a rabid animal. He found, too, that, by a series of inoculations through rabbits, the intensity of the virus was increased; that is, if the virus obtained from

one rabbit was inoculated into a second rabbit, virus from the second into a third, and so on, the strength of the virus increased; and the period of incubation was therefore shortened, until, from about fifteen days in the first instance, it was reduced, after a cultivation of the virus through fifty rabbits, to seven days. Now, the virus taken from the spinal cords of any of these rabbits would, if inoculated into a healthy animal, produce rabies; but if the cords are suspended in jars containing dry air at a certain temperature, the virus is gradually weakened or attenuated without decomposition taking place, until, after a certain period, it is no longer capable of producing rabies. By this process it will be seen that virus would be readily obtained of various degrees of intensity, ranging from an almost harmless nature to the highest point of virulence. By a series of experiments, M. Pasteur established the all-important fact, that if a dog or other animal were inoculated with a portion of this attenuated virus, and inoculated on each succeeding day with virus of a greater strength than that used on the preceding, it would be rendered non-labile to rabies.

This interesting fact has been most clearly proved by experiments made in this country by Mr Horsley, the Secretary of the Committee appointed by the Local Government Board. All the experiments, it may be here stated, were rendered painless by means of ether or chloroform. Six dogs were 'protected' after the method observed by M. Pasteur, or, in other words, they were inoculated with virus from the spinal cords of rabbits which had died of rabies, using on the first day a cord which had been dried for fourteen days, and on each succeeding day a cord dried for one day less, until a fresh cord was used. These six protected dogs, with two unprotected dogs and some unprotected rabbits, were then, after being made insensible with ether, bitten by rabid dogs, or by a rabid cat, on an exposed part. The results were conclusive. A protected dog bitten by a dog paralytically rabid escaped scot-free; while an unprotected dog, bitten a few minutes afterwards by the same rabid animal, died paralytically rabid. About four months afterwards, another of the protected dogs was bitten by a dog furiously rabid; he also escaped; while of four unprotected rabbits bitten at the same time and by the same dog, two died of rabies. This was the case with another of the protected dogs and some unprotected rabbits bitten at the same time: the dog lived, the rabbits died. Some six months after being inoculated, two other of the protected dogs were bitten by a furiously rabid dog; and on the same day, by the same dog, an unprotected dog and three unprotected rabbits were bitten. The unprotected dog and two of the rabbits died of rabies, while the protected dogs remained well. The sixth of the protected dogs was thrice bitten on one day by a furiously rabid cat, and a month afterwards by a furiously rabid dog, and again, in another month, by a second furiously rabid dog. It died ten weeks after it had been bitten on the third occasion, though not of rabies, but of diffuse eczema, from which it had been suffering during the whole of the time it was under observation. To make this quite certain, a post-mortem examination of the dog's remains was made, when no signs of rabies could be found; and two rabbits inocu-

lated with virus from its spinal cord in the usual way exhibited no signs of rabies while alive, nor could any signs of such be discovered when, several months afterwards, they were killed. The dog could not, therefore, have died of hydrophobia. The results of these experiments demonstrated in the most effectual manner the fact that animals can be protected from rabies by inoculating them according to M. Pasteur's method. The duration of the immunity thus conferred has not yet been ascertained; but during the two years which have passed since it was proved, there have been no signs of its limitation.

But such experiments as we have just recorded could not, of course, be tried upon human beings; and as M. Pasteur's method is not practised in this country, its success could only be judged of by examining the results of its application by M. Pasteur himself. Between October 1885 and the end of December 1886, M. Pasteur inoculated two thousand six hundred and eighty-two persons; but to take all these cases in the lump, as a means of ascertaining the value of his treatment, could not be considered a sufficiently accurate test, because of the difficulty there is in estimating how many, out of a certain number of people bitten by dogs rabid and supposed to have been rabid, would have died of hydrophobia if not inoculated. Much depends upon the number of bites, and as to whether they are inflicted upon the bare flesh or through clothes; in the latter case, the teeth of the animal may be cleansed in their passage through the clothes. Again, the bites of dogs are not equally dangerous, for cases have been known of a dog biting as many as twenty persons and only one of the number dying; and on the other hand, one dog biting five persons and all dying. Then, too, cauterising and other modes of treatment may prevent a fatal result. All these factors of uncertainty existing, it was necessary, in order to arrive at a just estimate of M. Pasteur's treatment, to investigate personally some of his cases.

He was quite willing that this should be done; and accordingly, the cases of ninety persons were personally inquired into in Paris and the neighbourhood by the English Committee. An analysis shows that out of these ninety cases there were thirty-one of which there was not sufficient evidence to prove that the dogs were rabid; but in the remaining fifty-nine the Committee found that the persons had been bitten by undoubtedly rabid dogs, and that out of these fifty-nine there were twenty-four persons who, after being bitten, had not been treated by cauterising or in any other way likely to prevent the action of the virus. That M. Pasteur's treatment has been efficacious is proved beyond any question by the fact that not one of these persons died from hydrophobia. How many would have died if not treated by M. Pasteur, it is, of course, impossible definitely to state. From observations made of persons bitten by dogs believed to be rabid, and not inoculated or otherwise treated, various estimates as to the number of deaths from hydrophobia have been made, varying from five to sixty per cent. If we take the ninety cases at the very lowest estimate, namely, five per cent, this will give at least four deaths; but seeing that twenty-four persons were

bitten on naked parts by undoubtedly rabid dogs, and not treated in any way, the Committee consider that no fewer than eight persons would have died. It cannot but be admitted that this estimate is indeed very low; in fact, to most people it will appear much too low.

But the two thousand six hundred and eighty-two cases treated by M. Pasteur from October 1885 to the end of December 1886 offer a still further proof of the efficacy of his treatment. Taking the lowest estimate of the percentage of deaths from hydrophobia among persons bitten by dogs supposed to have been rabid, and who were not inoculated, namely, five per cent, it follows that at least one hundred and thirty persons out of the two thousand six hundred and eighty-two should have died; whereas the number of deaths has been thirty-three only, thus showing a saving of close upon one hundred lives. These results may be clearly verified by comparing with them the results of certain groups of M. Pasteur's cases. Thus, out of two hundred and thirty-three persons treated by him, who had been bitten by dogs proved to have been rabid, either by inoculating other animals from them, or by other people or animals dying after having been bitten by them, only four died; whereas, without inoculation, it would be fair to estimate that at least forty would have died. Then one hundred and eighty-six persons were bitten on the head or face by animals proved to have been rabid, only nine of whom died after being treated by M. Pasteur, instead of at least forty. Again, there were forty-eight bitten by rabid wolves, and of these only nine died; whereas, without inoculation, it would have been expected that about thirty would have died—the deaths following bites from rabid wolves being, of course, much more numerous than from dogs.

From the end of December 1886 to the end of March 1887, M. Pasteur inoculated five hundred and nine persons bitten by animals proved to have been rabid, and out of these, only two have died, one of whom had been bitten by a wolf a month before being inoculated, and he died after only three days' treatment.

From January 1886 to April 1887, M. Pasteur has treated one hundred and twenty-seven persons from this country, including one hundred and one bitten by dogs proved to have been rabid. Only four have died, and in one case the death was certified by the English medical man to have resulted from pneumonia. Another of the deaths is scarcely to be wondered at, seeing that the man was repeatedly intoxicated during the whole of the time he was under treatment.

In conclusion, it may be interesting to note how the inoculation of the modified virus acts so as to avert the disease of hydrophobia. Three suppositions have been entertained as to its nature and action. First, that the virus is a living matter, which, when introduced into the system in a modified form, eats up something in the system necessary for its existence, so that, should strong virus capable of producing death be afterwards introduced, it finds nothing to feed upon, and cannot therefore develop. Second, that the weakened virus educates the system to withstand the stronger. Third, that while the virus increases in the body of the inoculated person, it also produces a substance which checks and finally

stops altogether its own growth. This action may be observed in the yeast plant, which as it grows produces alcohol in saccharine solutions, the alcohol presently stopping the growth of the yeast plant itself. M. Pasteur takes this third view, believing that the virus, when present in the system, produces a substance which is in fact its antidote. This being so, the spinal cords of animals which have died of rabies contain both the virus and its antidote. The cords are dried previous to being used, as previously explained, the potency of the virus being thereby reduced to a greater extent than that of the antidote; and each day a fresher cord is used for inoculation, which, though more virulent than that used the preceding day, still contains a larger portion of the antidote, so that, as the treatment proceeds, the latter is able to choke the growth of the virus before it has reached its full incubation period. On this theory it can be seen how it is possible for a person to be bitten by a rabid animal and yet escape; for it is evident that if he can only withstand the action of the virus up to a certain point, the antidotal substance will stop its further development.

#### RINGS IN TREES NOT A TEST OF AGE.

WE learn from the *Lumber World* that Mr R. W. Furras, an agent of the United States Forestry Department, who has given much attention to the age of a tree as indicated by rings, as well as to the period at which trees of different species stop growing, and that at which the wood is at its best, has reached some conclusions of general interest. He says: 'Concentric or annual rings, which were once accepted as good legal evidence, fail, except where climate, soil, temperature, humidity, and all other surroundings are regular and well balanced; otherwise, they are mere guesswork. The only regions within my knowledge where either rings or measurements were reliable indications are in the secluded, even, and regularly tempered valleys of the Southern Pacific coast.' Annual measurements of white elm, catalpa, soft maple, sycamore, pig-hickory, cotton-wood, chestnut, box-elder, honey-locust, coffee-tree, burr and white oak, black walnut, osage orange, white pine, red cedar, mulberry and yellow willow, made in South-eastern Nebraska, show that 'annual growth is very irregular, sometimes scarcely perceptible, and again quite large;' and this he attributes to the difference in seasons. As trees increase in age, inner rings decrease in size, sometimes almost disappearing. Diminished rate in growth after a certain age is a rule. Of four great beeches mentioned in London, there were three, each about seventeen feet in girth, whose ages were respectively sixty, one hundred and two, and two hundred years. Mr Furras found twelve rings in a black locust six years old, twenty-one rings in a shell bark-hickory of twelve years, ten rings in a pig-hickory of six years, eleven rings in a wild crab-apple of five years, and only twenty rings in a chestnut-oak of twenty-four years. An American chestnut of only four years had nine rings, while a peach of eight years had only five rings.

Dr A. M. Childs, a resident of Nebraska from 1854 to 1882, a careful observer for the Smithsonian Institution, who counted rings on some

soft maples eleven years two months old, found on one side of the heart of one of them forty rings, and no fewer than thirty-five anywhere, which were quite distinct when the wood was green; but after it had been seasoned, only twenty-four rings could be distinguished. Another expert says that all our northern hard woods make many rings a year, sometimes as many as twelve; but as the last set of cells in a year's growth are very small and the first very large, the annual growth can always be determined, except when, from local causes, there is in any particular year little or no cell-growth. This may give a large number on one side. Upon the Pacific coast of North America, trees do not reach the point where they stop growing nearly so early as those of the Atlantic coast. Two hundred years is nearly the greatest age attained on the eastern side of the continent by trees that retain their vigour; while five hundred years is the case of several species on the western coast, and one writer is confident that a sequoia which was measured was two thousand three hundred and seventy-six years old! At Wrangel, a western hemlock, six feet in diameter at the stump, was four feet in diameter one hundred and thirty-two feet farther up the trunk, and its rings showed four hundred and thirty-two years. But in the old Bartram Garden, near Philadelphia, not more than one hundred and fifty years old, almost all the trees are on the down grade. The oak, which is England's pride, and which at home is said to live one thousand years, has grown to full size and died in this garden; and the foreign spruces are following suit. Silver firs planted in 1800 are decaying. The great difference in the longevity of trees upon the western and eastern coasts of continents in the northern hemisphere seems to be due to the warm, moist air carried by strong and permanent ocean currents from the tropics north-easterly, in both the Pacific and Atlantic Oceans, which makes the climate both moist and equable in high latitudes.

#### B E Y O N D.

AUTUMN is dying; Winter is come;  
Dead leaves are flying; the rivers are dumb;  
The wind's like a knife—one's fingers grow numb;  
There is snow on the mountain, ice in the pond.  
Winter is with us, but Spring is beyond.

The Old Year is dying; its glory is dead.  
The days are all flying—their glory has fled.  
The bushes grow bare, as the berries grow red;  
There is snow on the mountain, ice in the pond.  
The Old Year is dying, but the New is beyond.

We are all growing old, and life slips away.  
There is bare time for work, and still less for play;  
Though we think we grow wiser, the longer we stay;  
But there's life in us yet—no need to despond;  
This world may wax old, but heaven is beyond.

## IN THE TURNIPS.

A BLUE haze rolls away in the distance, like a spotless fleece from millions of rain-diamonds. The fields shine in silver armour, not plain, but filigreed and incrustured with a marvellous cunning beyond the art of man. The sun peeps down into the glowing funnel, shining against the purple mist as on a cerulean wall. Cobwebs, elastic needles, shooting and contracting in the glorious sunshine, spun lines of sheeny floss, bar the way from hedge to hedge, where the purple saffron—the crocus of autumn—lurks, mandragora to the velvet-backed bees. In the air there is a sharp crack of frost, so faint as to be scarcely discernible, though it glows in our veins as no champagne can do; and over the streams hangs a pall of pearly nebulous haze, which covers the broad fans of the water-lilies with a gleaming coat. A brace of wild-duck splash and dabble in the quiet pool under a bending ash sapling, inverted now, like rainbow-coloured cones, as they reach for the bleached water-celery in the flood below. Yonder, a moorhen rides upon the water, a square black speck; we can hear a coot piping in the belt of reeds, no longer vivid green to the needles, but seared halfway down, as if a breath of fire had scorched them. Forget-me-nots, the paler blue variety, the myosotis probably, bloom here luxuriantly, some of the star-shaped heads large as a shilling; what with ash-berries, wild geraniums—still lingering in the sheltered hollows—late grasses, ruddy leaved anemones, late blue-bells, and the long trails of the bramble, its leaves burnt, and fused from pale primrose to delicate rose-pink, a late bouquet can be gathered.

Last night's frost has caught the bramble leaf. Here is one with veins of dull red gold, shaded away to the main sinew a flushed scarlet, through all the gradations of colour—ether blue, rose madder, and saffron. A chilled tortoiseshell butterfly lies on the leaf, its wings closed, the segment of a leaf almost itself, till it is held up to catch the fragrant warmth; it gradually expands and flies upwards. Close by, under a clump of

dry moss, there is a tiny hole in the bank, a murmurous hum in the air, as a colony of orange-tailed bees, with bodies softer than the sheeniest plush, dive in and out, some clean and bright, others covered with a fine powder, a yellow dust that goes to help the waxen cells. Some of the same colony have found their way to the thistle-bloom, where they crawl, drugged and helpless, like a Malay under the dangerous fascination of a pipe of opium.

The mist rolls away as we drive along, till the whole panorama lies before us. On either side, hills rise clad to their crests with trees, the leaves commencing to turn, the transformation more apparent when they are backed by belts of dark firs. The ashes are blackening already, the sycamores are a mass of yellow, showing strong against the copper beeches. In the orchards there is a sombre brown coating where the fruit gleams warm gold or crimson-streaked, pale waxen yellow or glowing red, the imperial purple on the plums making contrasts all too inviting. A squirrel in the hazels pauses in his nimble flight to contemplate us with his dark eyes; yellow-hammers in their winter plumage flit along the gorse bushes. There is a bloom upon it still, no longer virgin gold in colouring, but faint as late primroses. We are nearing our destination. The sun has climbed up higher; it will be hot presently, though the dew still lies thick in the shade. Cattle, sleek, russet-coated, stand knee-deep in the straw; there is a rush, a bark of welcome from a cluster of dogs, and our host stands at his gate, with a smile of welcome to greet us.

Breakfast is laid for us in 'the study,' an apartment which, with the exception of a complete set of *Bailey* and the *Gentleman's*, contains not a single volume of any kind. Our host has a brown face, a keen gray eye that will get but little 'wiping' to-day, one that can look along the barrels of a sixteen-bore to some purpose. There are some half-dozen guns, worn smooth in the barrel as hammered silver; a pile of cartridges at one end of the oak table; at the other, a cloth laid with

covers for three—welcome sight, after our nine-mile drive. As we take our places, the dogs bound in : a splendid retriever, black and glossy as ebony, with a ripe red brown on his loins ; a pointer, dappled with splashes like a strawberry ; a young setter, half-made as yet, thin as a whipping-post, and eager as an excited child. The eggs and ham smoke on the board, some fragrant coffee throws out an aromatic smell ; but our host, a good old-fashioned conservative, holds to the cold beef, and swears by his tankard of home-brewed. Thirty miles a day across the stubble or the grass meadows have inured him to stronger potions than we dare to take. Lucky Rusticus, with the clear brown skin and hearty laugh, who has never known a day's illness or a day's sorrow in the whole course of his thirty-five years.

In the lanes there is deep red mud, churned by wide-wheeled wains ; and swaths of corn hang from the hazel wands, bending now under the weight of nuts in russet sheaths ; distantly, the hum of a thrashing-machine makes drowsy murmur. Here is a stubble-field, fresh reaped, where a long string of geese march in search of golden grains, and over the brow of which a hare scuds, startled by our heedless footsteps. Close against us, an orchard lies, laden with fruit, the grass vividly green ; dew spangled where the sun cannot reach down to the sloping boles of the lichen-clad trees. A great green woodpecker, called here a 'heckle,' bright green and lemon-yellow, taps upon the trunks like a postman's knock, undisturbed by our approach. Round the tree he goes in spiral gyrations, higher and higher, till, with short piping screams, he flashes away to the distant woods. In the corner, there is a sudden whir ; a dusky glimpse of brown wings, as a covey of birds clear the hedge ; bang, bang ! go the guns, and out of the waning flight two seem to stop, as if held by some unseen power, and fall to the ground. One we find stone-dead in the fallow ; the other is utterly lost, as if by magic. The black setter stands at length over a tuft of grass no larger than a man's hand, a marvelously small space for our wounded bird to hide itself ; and there it is found.

We are in the turnips at last—a goodly crop, lying east and west in even rows, with a bloom upon the broad leaves, and dewdrops like liquid diamonds shaking in the purple-laced edges as our feet disturb them. In the centre of the field, a solitary figure is standing, fork in hand, a stalwart countryman, only moving in short steps, as if there was some great weight attached to his limbs. Strange that the feet formed to follow the plough through the fallow, the scythe through the grass swaths, should inherit from his sires, or generate for himself, the seeds of the agricultural labourer's greatest curse—rheumatism. But where the land is deep and red, and where pasture does not predominate, the demon lurks in every moist hedgerow or drenched clover-field. See

Hodge dressed at his best on the gala days of rustic fairs, and, young or old, you may see how the enemy steals upon him.

But Giles, in spite of his rheumatism, has a sportsman's heart. He pauses in his uncongenial toil, and, leaning on the long handle of his fork, stares at us with the honest disconcerting contemplation a genuine Simon-Pure countryman can alone assume. The workings of his mind are not particularly rapid ; then, without a word, he raises his hand, pointing stolidly to a distant corner, where the roots are thickest, and the shade from a copse throws a grateful shadow. The dogs have settled to their work now, making smaller circles in front of us, till at length the pointer stops, as if frozen into stone, his nose cast to the wind, every lithe muscle and elastic sinew rigid. A few steps farther, and there is another mad whirring of wings. Bang, bang ! go the guns. The blue smoke drifts away in spiral coils, a handful of feathers floats in the air, and two brace and a half lie dead upon the turnips. A hare starts madly across a bare patch, going down the wind, then suddenly stops, turning three complete summersaults, and lies a mass of golden brown fur, stiff and still. And we have not been walking more than half an hour as yet !

In the seed-clover there is a murmurous hum, as from a million bees. The purple bloom is nearly off ; the tops are brown and seared, though in the rich undergrowth there is a perfect carpet of honey-yielding flowers ; first of all, the white and purple clover, rich in nectar as the blue belt of hoarhound that stripes the golden state of California. Here, earlier in the season, the screaming plover has nested, the lark has found a resting-place, or the whinchat has laid her speckled eggs. Clouds of small birds rise at our feet out of the rich feeding-ground, their spectre-flight contrasting now and then with the heavy whir of a well-fed pheasant winging his noisy way to the woods. The bees are busy to-day ; the honey-gatherer in his useful brown coat, the great orange-tail with noisy hum of doing much with scant result, the black velvet-backed bees—all are here, making their harvest before the coming winter. Another fortnight, and the last feast of flowers will be over, though the sun is hot overhead and summer fills the air. But they know, with that marvellous instinct, as the hawkweed knows of the coming storm, or the seabirds scent the distant gale. Over the whole of the dead seed-heads they flit like an invading army ; and with them come the homely birds, waiting now for the flushed berries in the hedgerows to ripen under the warm breath of the September sun.

Here is a long rambling hedge over a warm south bank, against a field of ripe, pungent smelling hops. There must be trees of some half-dozen growths in its entire length—blackthorn, hedgerow elms, alder, dwarf-oak, hazel, and hawthorns, with masses of wild-rose, sloeberry, luscious bramble, and shining dewberry at the foot. Here in itself is material enough for a lover of nature to write a volume. The profuse clusters of red-black hawthorn berries are seen beside the vivid scarlet hips of the straggling dogrose, or, as the children here call them, 'soldiers ;' sweet to the taste when they are

scooped out, and the furry seeds taken away. The berries have all their ripeness and richness of colouring, like seasoned mahogany, but without the final polish that brings out the beautiful graining of the wood; their polish will come from a few more drenching dews, followed by a touch of hoar-frost, and consummated finally by the pale November suns. They hang in coronets of shining necklaces, untouched as yet by the birds; the leaves are turning brown behind them, though the hazel tassels are still a sheeny emerald. Behind them you can see how the conflagration of the woods burns with a luminous shine, not so deep as it will be presently, but still enough to present a harmonious haze of beautiful tinting; an artist's despair, the consumption of nature, like a lovely woman with the scarlet flush upon her cheek. The deep sap-green of the hops, like a living wall, stands behind, touched plentifully by a pale sulphur yellow where the fruit has ripened. If you will take the dry seeds and place them under a strong microscope, you will see nuggets of virgin gold, so bright and clean are they. It is all silent now; a few days later, and the green solemn stillness will be alive with labour, picturesque and wild, and noisy with a babble of strange tongues, utterly unlike our deep west-country accent.

Passing away to the right, we come to a piece of 'rough,' a tangled mass of fern, and gigantic thistles with heads like bursting cotton. There is a chatter of birds; the red flash of bullfinches, the golden flit of a cloud of goldfinches in the air, others perched upon the thistle branches, hundreds of them making a yellow splash against the sombre brown. Two men crouch down near a cage containing a call-bird; already they have gleaned a goodly feathered harvest, for by them is a wire prison in which half a score of frightened songsters rush and flutter, as if they would beat their hearts out against the cruel bars.

The sun is high up overhead in a cloudless sky; nature seems to have changed her rosy aspect since we started. Autumn of the cherry cheek and purple brow seems to have stolen from Summer—loth to depart—a charm or two to deck her glowing beauty. Past two now, and in a sheltered corner lunch awaits us, sportsman's fare—bread and cheese, a few slices of cold meat, sparkling cider, and bright home-brewed ale in stone jars. Ten brace of birds lie on the brown turf, with three hares, some rabbits, and, in contrast to them, the sheeny blue of the wood-pigeon's plumage. If you look at the dogs as they sit waiting for their turn, you can see how their black eager noses turn to the wind and quiver, like the muzzle of a stag in the ferns. Behind us is another field of roots, where the partridges are calling; and if you strain your ears, you can catch the whistle of a snipe in the reeds. For nearly five hours we have been walking over hill and dale, and yet there is a freedom of step, an elasticity of limb that nothing seems to tire. The cream of the day is still before us; the birds are lying well, and many a patch of clover and turnip still remains unbeaten; evidently, we are going to have a day to be marked in sporting memory with a white stone.

Presently, we skirt a belt of woods, still and quiet, save for the challenge of a pheasant or

the ring of a distant woodman's axe. Under a giant oak, on the short thymy turf, a fox lies sporting with her cubs. Tread softly, and see Reynard at home—three of them altogether; they roll over and over, a mass of reddish-brown fur, showing their white teeth. Close by, a blood-stained mass of feathers lies, and with them a half-eaten rabbit. Unconscious of danger, they play around, till one of us treads too eagerly on a dry twig; then, as if by magic, there is a rush, and they are gone. What a marvellous instinct these pariahs of nature have for scenting danger! Over the very spot a cock-pheasant struts in the full beauty of his sheeny plumage, his burnished neck and golden-blue crest in vivid contrast to the white ring round his neck. A host of his hens follow behind obediently, tame almost as the barn-door fowl now; but docile as they are, lazy of flight and hard to scare, they will come 'rocketing' over the bare oaks fast enough in another month, when the roaring equinox has beat upon the woods, and the naked oaks rock before the gale. See them coming down the wind then, with a scud like a seagull, and you shall not know them for the same half-domesticated birds.

The sun begins to slope down in the similitude of a glowing copper shield; the breeze grows fainter and dies in the fern fronds; a bright flush touched with rose-pink warms all the western sky, making a golden tracery finer than the most delicate lace behind the pines. All along the east it is a steely blue, with the cold mists rolling up with the crescent moon. A tiny stream runs through a broken meadow, full of thorn-bushes, reeds in feathery clumps, and broad-leaved flags of the yellow iris. Earlier in the spring, about Eastertide, it was one waving mass of orange-coloured bloom from the nodding daffodils. Here are scattered birds from the frightened coveys—conies racing away right and left, a snipe or two with quick zigzag flight, and on the quiet pool a brace of moorhens. The acorns are falling fast; they crunch under our feet; a polished brown at the dome, a pale saffron where the cups have held them. Under every bank, half hidden by the coarser plants, the hartstongue throws out its long burnished leaves; beech and oak fern are abundant; though it is so far south, you can gather a button-hole of white and purple heather. Here and there are giant mushrooms—not the round white domes of the water-meadows with their chocolate linings, but wide, spreading fungi, in shape like a parachute, coloured like oak-bark, and black underneath; gigantic puff-balls incrustated with tiny dots, upon which the dew lies like a cluster of jewels, all full of sap now, though, later on, the children racing home from school will kick them with eager feet, to see the brick-red dust fly out of these natural snuff-boxes.

Every yard we cover holds something new. Here at our feet is a moving dome of moist brown earth. Kick it over quickly, and out glides a black little engineer, soft as the daintiest sealskin, astonished to find himself in the light—the mole, perhaps the most hard-working of nature's miners. He loses no time in idle regret; see how quickly he buries himself again; a second later, and he is gone. Man makes war upon him in blind ignorance, as those black spots hanging from

every bough of yonder willow can testify. This one must have worked hard; an uplifted mass of turf, an irregular line some forty feet long, mark his track. Like the worms, they are splendid drainers; yet every farmer will tell you they are his greatest pest.

Let us count our bag, for the light is waning fast; the woods begin to loom nearer; a conflagration as from a thousand coloured fires rages in the western sky. Thirty brace and a half of partridges, five hares, a score of rabbits, a couple of landrail, and a brace of pigeons. And above this, a walk of nearly forty miles in some of the grandest scenery the west country affords. The keeper shoulders his gun, and bids us a respectful good-night as he drops sundry coins into his capacious pocket. Limbs are not so elastic now, and visions of warm baths and clean linen rise in refreshing vision before the mind's eye.

Look at the sunset for a moment: every colour is there from indigo to golden. How many pigments can an artist count upon his palette!—Perhaps fifty at best! Here we have a thousand delicate gradations, infinitely blended, so that the keenest eye cannot discern the marvellous grades, the infinitesimal shadings that in one small space cover the whole gamut of colour. There is no coldness with it; everything is glowing bright, bathed in sunlight, that most wonderful varnish which develops every minute variation. Then, every passing moment brings some change; a tiny cloud no bigger than a man's hand, one minute is snowy white, then rose-pink with golden edges; fading to saffron, to chilly gray, to pale, lustreless indigo. Other cloud-banks, a while ago like piled-up snowdrifts, change to burning mountains on the crest, and sun-kissed valleys in the hollows; many of them might be plated cobwebs, so marvellously fine their tracery is. Long before we reach our destination, they are all cold gray, with a burning fire upon the horizon, as if a forest in the west had burned itself away to the ground and was dying in sullen embers. In the east, the rising mists have lost their coldness, as the moon touches them with a silvern floating vibration like a sea at flood. She has lost all her pallor now; her face is polished with a metallic lustre, as she shines upon tree and moor and fell, making ghostly shadows in the rickyard; upon the white gates, behind which welcome lights gleam, and the sheep-dog barks a welcome to the ingle nook.

RICHARD CABLE,

THE LIGHTSHIPMAN.

CHAPTER LII.—CONTINUED.

MANY days passed, and Josephine sat in her little parlour working at the frocks for the seven girls—frocks!—gowns for the elder children, who grew apace. Through her window she saw them pass, tall, beautiful maidens with fair hair, like corn, as yellow and as shining, and eyes blue, and cheeks like wild-roses. Among the dark-haired, dark-eyed, and sallow-skinned natives, they were looked at with surprise and a little envy. They kept themselves aloof from the village children—

not that they were proud, not that they shared their father's prejudices, but that they had enough of companions among themselves. They were an attached family; they had been nurtured in love, and the love their father had poured into their infant hearts had filled them and overflowed towards each other. They had, indeed, their little quarrels, but they passed like April gusts, leaving the sunshine brighter after the cloud, and the landscape fresher for the shower.

Then, at times, Josephine's work fell from her fingers, and she sat with the needle in her hand, poised and motionless, looking before her. It was not the historic muse who then visited her and raised a mirage picture of castles and knights jousting, and gay ladies looking on in the most picturesque of costume; or of tapestried chambers, in which walked Van Dyck figures with long hair and Steenkirks, and rapiers clinking and spurs jingling, and lapdogs of King Charles's breed snapping—it was a muse who is nameless, a Cinderella muse, thrust aside by her sisters, and clean forgotten, the Muse of Unfulfilled aspirations, clothed in white with a hawthorn crown, and eyes filled with tears, and bare feet dripping blood.

What were the visions raised before the brooding mind of Josephine, sitting at ease in the enchanted palace, sent to sleep and made motionless in the midst of work? The picture brought up by the magic wand of the muse was a humble one—of a little cradle, in which lay a sleeping babe, with one small hand out, and a coral resting on the quilt; of a baby snuggling into her bosom at night, and sobbing, and being patted, patted, patted by the hour, and talked to half-pitifully, half-wearily, to coax it to sleep; of a child growing up, standing at her knee and learning to thread beads, and whilst threading, repeating, 'Once upon a time, when Jenny Wren was young;' of a young maiden—like Mary in growth and beauty and sweetness and innocence, looked up to and loved by all the village, and adored by her mother, who only lived and thought for her. Her day-dream went no further. Oh, if she could have had a child to love and labour for, to cherish and talk to, to kiss and laugh to and weep over!—her solitude would not have been so depressing, her pain not so unrelieved. Bessie Cable had endured years of suffering, yet what was hers to that of Josephine, for Bessie had her child to love? She looked for the time when the fair faces of Richard's daughters passed her window, and her ear was alert to catch every tone and inflection of their sweet voices, whenever they came into the shop to buy the groceries needed for their home.

When they came to be fitted on, her slim white fingers trembled, and she could not well see what were the defects to be remedied, because her eyes were clouded. Finally, the seven dresses were finished and sent to the cottage, and then each had a little packet of sweet things neatly wrapped up in the pocket; for that the children came and thanked Miss Penruddock, for they supposed the kind shopkeeper had put them there.

With such dear children about him, Richard

had a home complete in joys, and he needed not another inmate. He could dispense with his wife, who was not the mother of these lambs; surely, he did not imagine the solitude of the girl, who was without an associate of any kind.

After Josephine had done the frocks, other work came in. The servant-maids at the parsonage wanted this and that; and then some of the farmers' wives sent for her to come and work at their houses. She found that thus only could she obtain continuous work. At the farms she was well treated, given plenty of food, somewhat coarse, but wholesome, served in a rough way, and partaken with the labouring men from the land. There was also plenty of conversation going on, but it was wholly confined to local gossip—the misdoings of this young woman, the shameful conduct of the parson in preaching at So-and-so, and the favouritism of the schoolmaster among the children. The maladies of the family, of the cattle, of the ducks and hens, were discussed with intolerable prolixity, and with a breadth of language unsuitable to the narrowness of the subject. The costume of the continental peasant is a century behind the fashion of the present. The Black Forester wears the knee-breeches and long coat and waistcoat that were the dress of gentlemen in the time of our great-grandfathers; and the Tyrolean peasantess wears the short bodice of our great-grandmothers. We have no costume in England—slopshops everywhere kill costume—but we have social habits, and the habits of our lower middle class, of the yeomen and the tenant-farmer, are those of our great-grandfathers; they crack the same free jokes, and their wives laugh at them, as our great-grandmothers laughed; and they drink till they are merry, and upset their light carts coming home from market; and fall into the ditch, just as our great-grandfathers tumbled under their tables. The wives are thrifty, and great at cordials and supplies of linen; and they as girls had worked samplers, which they retain in married life framed on their walls, to be tokens of their skill with the needle; just as did these ancient ladies in our dining-room who look down on us out of their tarnished frames and through cracked varnish.

In the eastern counties, the old race of small farmers and yeomen have well-nigh disappeared, or rather they bid fair to disappear, before the gentleman-farmer with his thousand acres; but the agricultural depression which has cut down these big men has spared the little, and they are reappearing again. In the west of England there are very few mammoths, only small men, and the small men make the money and stand the stress of hard times.

The class among which Josephine went was quite different from that in the servants' hall at Bewdley. That class was one of the spoiled tools of luxury, young men and girls transplanted from cottages where they had lacked everything but the barely necessary, to a house where they lacked nothing, but rioted and surfeited on abundance. In their homes they had been subjected to the rough moral control of village opinion; in the hall, they were a law unto themselves. They had been brought up in freedom and frankness; and they found themselves in a region where they must practise dissimulation as part of their qualification. They resembled wild-flowers

brought into a forcing-house, treated with strong manures and much bottom heat. But where Josephine now went, it was among wild-flowers in their natural element; they were fresh, strong, rough-stemmed; not brilliant or choice, but natural. In the servants' hall, an atmosphere of absurd affectation had prevailed: Mr Polkinghorn talked of his ancestors; and the maids languished, minced their words, and imitated the easy motions of the ladies they saw. In the farmhouse, the fresh air blew—all was natural and hearty—but the fresh air was somewhat charged with the reek of stable and cowhouse. From the farmer down to the servant, all were blunt, dull, noisy, ignorant, free in their talk, but with a healthy downright sense of the just and moral, and with great kindness of heart and readiness to assist one another. Josephine was obliged to carry her sewing-machine when she went to the farmhouses, scattered at considerable distances from the 'church-town' where was the post-office where she lived. As the winter drew on, the nights were dark and the weather stormy. She was often wet through and tired, and the burden of the sewing-machine was almost more than she could bear. She did not like to ask to be assisted with it; the sturdy country girls thought nothing of such a weight, and did not mind a wet through and a trudge in the mud, so that she was not volunteered assistance.

When she reached her lodgings, she was sometimes so exhausted that she flung herself on her bed, too fagged to take off her wet things; and thus she would have lain and fallen asleep, had not the kindly postmistress looked after her, and insisted on her getting up and putting on dry clothes. Every Sunday morning early, she went to the cob cottage in the lane that led to Ross-carrock, with a little basket in her hand, and laid on the window-ledge of the children's room seven little bunches of flowers—rosemary and mignonette, a monthly rose and marigold, such simple flowers as she could beg of the farmers' wives where she worked on the Saturday. And every Sunday the seven girls went to church with these flower-poses in their bosoms—the 'pixy present,' they called them, and always wondered whence they came; and little thought that they came from the strange young woman with the wonderful voice, that the vicar's wife had lately taken into the choir. Did Richard guess? He asked no questions; but his mother said to him, when he happened to be home on Sundays: 'Do you see these pretty posies? The little maids found them again this morning on their window-sill.—Smell them, Richard; how sweet they are—they scent the room.'

'We shall have grand flowers when we come to Red Windows,' he said.—'No; I will not smell them: they give me a headache; take them away.'

Then winter-frost killed most flowers; but the feathery seed-heads of the traveller's joy, with bramble leaves of carmine and orange and gamboge and sap-green, with a rose-hip or two, made nosegays as beautiful and rich as any made of flowers, and these were laid as had been the bunches of blossom.

Christmas morning came, and Josephine started from her bed as the day began to break. She had made seven of the prettiest little posies of

white chrysanthemums, which had flowered on untouched by frost, and they were surrounded by the green fronds of the crane's-bill.

What was that? Her heart stood still, as, undressed, in her night-attire, with a white bunch in each hand, and her dark hair down her back, she stood listening. What was that? A sound she knew well, but had not heard for long. Again! What was it? In the room or outside? Then a cry of joy. 'My Puffles! my Puffles! You dear one! Who has brought you here?'

Her bullfinch, in the cage, that she had sorrowfully parted with at Bewdley, was in her window. Who had brought it her? Who had thought of her sorrowing to be without her bird? Who but he who had let it go and caught it again!

That Christmas Day, clear and sweet rang out the voice of Josephine in the song of the angels, and her heart beat with hope.

#### CHAPTER LIII.—RED WINDOWS AGAIN.

The house progressed. By Christmas, the roof was on; then the plasterers and the carpenters went to work, not fast, but leisurely. They kept holiday on Christmas Day, and on Old Christmas and at New Year; and they knocked off work early on Saturdays, and came to work late on Mondays. They had much information to impart to each other, and all were called together to consult on every detail. When it was wet weather, they came and looked at the work and went away; and charged half a day's work for looking on the work and deciding to do nothing. When the masons were ready to build, the stones were not ready for them to build with, or the mortar was not mixed; so they waited and talked, and charged for having been on the spot with nothing to do. When it came to plastering, they were short of laths or short of nails, or short of sand or short of lime—short of everything except reasons for doing nothing. So with the carpenters. They went to work to do the thing the wrong way; and when it was done, and they were convinced it was wrong, they went to work and pulled it to pieces again; and recommended doing it in another way. When the rain fell or there was frost, masons, plasterers, carpenters, plumbers, and painters wanted to work outside, and saw clear reasons why it was impossible to do anything inside; and as the rain hindered or the frost prevented, they went away with their hands in their pockets and sat under a shed, looking at the front of the house and the rain or the frost; and charged for their desire to work when it was not possible to work. When the sun shone and the air was warm, they wanted to work indoors, and there were unanswerable reasons why the work out of doors could not be got on with. However, in spite of all these difficulties, the house progressed, but progressed so slowly as to astonish even the masons and carpenters and plumbers and plasterers and painters themselves, and to comfort them greatly. They were not going to kill the goose off-hand that laid the golden egg, but pick him to pieces feather by feather.

The plumbers laid the lead, and the masons walked over it with hobnailed shoes, making holes in it, which required a revision and a patching with solder of the lead which was quite

new; and when the glass was put into the windows, the carpenters drove planks through the panes, necessitating new glazing. And the ironmonger brought grates that would not fit the chimney-pieces, and invoked the masons to pull out the mantel-pieces again and put them in afresh. Then he made holes in the plaster for the bell-wires so ragged and so big that the plasterers must needs come and mend them up again. Lastly, the glazier put his hand into putty or white paint and smeared a circle in the midst of every pane, to give work to a woman to clean the windows.

The painter performed wonders; he coloured all the woodwork of the house flesh-colour, and called that priming. Why it should be primed flesh-colour, he did not say. I remember how that there stood over the market hall in Launceston—and it stands there still—a clock on which are two figures with hammers, that strike the hours and the quarters. Many years ago, the civic authorities ordered the repainting of these automata. Then a painter went up on a scaffold and primed them, after the manner of painters, flesh-colour. The mayor issuing from the Guild Hall saw this, and was frightened, or shocked, and with mayoral mantle and gold chain of office about his shoulders, ran up the ladder and said: 'What are you about? We don't want to have Adam and Eve here.'

'I'm priming, your Worship,' answered the painter, 'as you were primed afore you drew on your clothes and insignia.'

Now, it is reasonable enough that figures representing human beings should be coloured pink first, and painted with clothing to taste, afterwards; but why windows? Why doors? Why skirting-boards?

A recent writer on Natural Law and the Moral Order holds up to scorn the hermit lobster, which does not build its own shell, but seeks a ready-built house into which to slip. The writer of that book never had to do with the erection of a manse for himself, I presume, or he would have taken off his hat and bowed to the hermit lobster, and pointed him out as an example of instinct so acute that it reached wisdom.

Richard Cable had accepted the builder's rough estimate of cost and of the time the house would take in building, and had left a margin; but soon found that the margin should have been as wide as that in an *édition de luxe* book or of a modern funeral card. A builder can always discover reasons for spinning out the time, and especially the expense. Cable found, before the house was done, that he had spent all the money put by for it, and was obliged to borrow for its completion and for the furnishing; and this did not improve his humour. He had not allowed the house to be built by contract, because he knew very well that what is built by contract is badly built; and that if he were to pay an overlooker to see to his interests, the masons and the carpenters, and the plumbers and glaziers, and slaters and painters, would give the man an acknowledgment to overlook their bad work. So he had his house built by day-work, and then it was to the interest of the men to do their work in the most substantial and thorough manner, because that is also the most slow and costly manner.

When Cable was on his way back from each

journey, he thought within himself: 'Now I shall see a great advance in the work; I have been away three weeks.' But on his arrival he required good-nature and faith to see that a proper amount of work had been done; and good-nature and faith fail when disappointed repeatedly. However, the house was finished at length and furnished—furnished quietly and scantily, because the money ran short. Richard was not alarmed. He knew he would earn the necessary sum, but he was sore at having to borrow. The consciousness of being in debt was new to him, and fretted his already sore spirit. It took the zest off the pleasure of having a grand new house of his own. He had no difficulty in getting the money advanced by the bank; he was pretty well known to be a man who made gold by turning it about in his hands. It flattered his pride to be able to borrow so easily, and yet it galled him to know that the house was not absolutely his own till the debt was cleared away.

The house was finished; and it had seven red windows in the upper story, and three on each side of the door below. To the door led a flight of slate steps, and the door opened into a spacious hall. The house looked larger than it really was, because it was shallow. The hill rose too rapidly in the rear to allow of much back premises. In the garden was a summer-house, as he had seen in his dream, painted green, with a gilt knob at the top, very fresh and shining.

When the house was complete, and ready for him, he arrived from Somersetshire; and in the evening, when the children were in bed, his mother put the key on the table. 'There!' said she. 'To-morrow we leave this old cottage for the new house. Richard, why not take possession of it with a new heart? You are in the wrong now. She has been here many months, and all speak well of her. She works for her living, and works hard. There are no pride and stubbornness left in her; all that has passed from her into you; and the gentleness and pity and meekness are gone from you into her.'

He moved impatiently. He took up the key and threw it down; then he pushed it from one side of the table to the other, and his face was sullen. 'Mother,' he said, 'I would not allow another to speak to me of her. It is enough. You have said your say. I have suffered too much from her. I have said it. We are parted for ever.'

'You have not seen her.'

'I do not choose to see her.'

'But you should. She is greatly changed, and looks weak and frail. You do not think that the great alteration in her mode of life must hurt her. She is like a flower taken out of a garden and put on the moor, where every wind blows her about, and every animal that goes by tramples on her.'

'Who has dared to touch her?' asked Cable, flaring up.

'I do not mean that any one has purposely wronged her; but she is in a place and among people who do not understand her, and she cannot endure rough handling. She is too delicate, and it will kill her.'

'What do you want, then? If I give her money, she will not take it.'

'Not if it be given churlishly.'

'Churlishly! Are you also turned against me?'

'You are acting wrongly. I would not say so to another; I would not let her suppose that I reproached you; but in my heart I think it. I also went on for years harbouring my wrong, and believing that I could never forgive it; but the time came when I was forced to forgive; and you, Richard, you also must do the same.'

'You have said this before. I cannot listen. I shall go away again;' and he put his hat on his head and went forth.

Next day, the few things required to be removed from the cottage were carted to the new house; but Richard would not move into it till evening, when no one would be about to observe the migration.

The sun had set when they all started for Red Windows, the father leading, then Mrs Cable and little Bessie, and the rest two and two, the twins of course together. The youngest carried their toys, a battered doll, a wooden horse; and the elder, sundry treasures that could not be entrusted to other hands to transport. The evening was still, soft, and summery; bats flew about and screamed ear-piercingly. The hedges were full of foxgloves and wreathed with honeysuckle. Glowworms shone in the banks, jewelling the way, as pixy lamp-bearers welcoming them to their new home. The procession moved slowly, because Bessie was heavy to carry, and because Susie could not walk fast. It moved silently, because the children were depressed in spirits, sorry to leave their little rooms and garden—the known for the new, the loved for strange.

Cable spoke; but his voice startled him and the rest. He felt not as if he were being advanced in position, but as if he were going to execution. He turned and looked at his mother. 'Let me carry Bessie now,' he said.—'What are you whispering?'

'I was not whispering.'

'I saw your lips moving.'

'I was repeating to myself some words that kept coming up in my mind, like a cork in water.'

'What words?'

'Merely a text, and I cannot say why they rise.'

'What is the text?'

'He shall lay the foundation in his first-born, and in his youngest shall he set up the gates.'

'What do you mean by that?'

'I mean nothing; but I cannot get the text out of my head. It seems to point'—

Cable laughed. 'This is mere superstition, mother. You have Cornish blood in you. Besides, the foundations are laid and the gates set up, and nothing has occurred.'

She said no more, nor did he; but the words she had spoken did not help to cheer him. Presently, he found his own lips moving; he was repeating the ominous words; and a fear fell on him lest they might apply not to the bare walls and wooden gates, but to the domestic life in the new mansion—a new life to be built up amid new surroundings and in a new sphere. For, indeed, Richard by this move mounted the social scale. In the cottage, he was but a cottager; in the grand new house, he was transferred to

the middle class. As Josephine went down, he went up.

He opened the garden gate, and the feet of the little procession trod the newly gravelled path. There were flower-beds, but no flowers; a lawn, but the grass was battered and cut up with the traffic of the builders. They came to the flight of steps; and Cable went up, put the key in the door, and tried to open it; but the wood was swollen, and the door stuck. He put his knee to it and forced it open, and the noise reverberated through the empty house like thunder. Then the children came in. The air within smelt of lime and paint. He struck a match and lighted a paraffin lamp. The children looked round in astonishment, but expressed no pleasure; they shivered; the night-air had been cold, but the interior of this new house seemed colder still.

In the dining-room, a cold supper was laid—lamb and salad, whortleberry tart, and cream, blanchmange—'Shaky trade, that is bluemange,' the woman called it who had cooked the supper, an old cook from the parsonage, married in the place.

'Sit down,' said Richard. 'Eat heartily your first meal in Red Windows.'

But the children were not hungry; his mother did not care to eat, and he himself had no appetite. He forced himself to take lamb, but he could hardly swallow it. The children were silent, looking about them at the walls and ceiling, and the chimney-piece with the mirror over it.

'Well,' said Cable, 'as no one seems hungry, the sooner to bed the better.'

So they parted for the night.

Next morning, he was in his garden. The blacksmith appeared at the gate.

'Neighbour,' said he, 'glad to see you well quartered. I'm sorry I haven't been over the house; the iron-work was not given to me, but to a Camelford man. I'd have served you better. However, I bear no malice. I should like to see over the box, if you've no objections.'

'Box! What box? Do you call a mansion with seven windows on the front in the upper story and six below—a box? I have objections to show my box, as you call it.'

'Oh, I meant no offence,' said Penrose. 'I'll come another day.'

'This is not a showplace,' said Cable curtly.

The next to come was the innkeeper. 'Halloh! Mr Cable! Shake hands. Glad to see you. We've lost our guardian—died the other day; so we've had a vestry meeting and elected you guardian of the poor, unanimous.'

'I—guardian of the poor! the poor of St Kerian?' He laughed bitterly. 'No one cared for me and watched over me when I was poor and ill. Why should I care for your poor and be their guardian, now I am rich?'

'Come, Cable, don't be sour. Give a sovereign, and we'll have the bells rung for your housewarming.'

'Not one penny. It concerns no one but myself and my family that I enter Red Windows.'

The taverner shook his head and went away.

Then his mother came to him, and said: 'Richard, why do you not meet the St Kerian people in a friendly way, when they make the first step

towards good-fellowship? Why do you refuse the hand that is held out for yours? Why should you be angered that they look on you now with other eyes than those with which they saw you enter the parish? When you broke stones on the road, what was there in you to attract their esteem? When they saw your love and care for your children, they respected you; and when they found you were making money, they acknowledged that you had brains. Was not that natural and reasonable and right? When you were poor, with seven hungry mouths crying for food, there were others worse off than yourself, and what sympathy did you show them? When a crippled beggar came through the village, did you rush after him, take off your hat, and offer him hospitality? Why, then, are you angry with the St Kerian people because they only begin to touch their hats and notice you, now that you are well off? You are well off because you have talents above their level, and this they recognise.'

'I wonder what *she* thinks, now that we are in our house, when she sees the smoke rising from the chimneys, and the windows lighted up?'

'She thinks that a cottage where love is, is better than a thirteen-windowed mansion where there is hardness of heart and pride.'

Richard did not answer; he walked away, and went about his grounds and planned improvements, and seated himself in his garden-house, and tried to believe he was happy. At night, when alone, he sat again in his summer-house with the door open, and looked down at St Kerian, which lay in the valley, with a gossamer veil hanging over it, the vapour in the air condensing above the stream. The church tower stood out like ivory against the black yews. He could see the chimneys of the parsonage, and the glitter of the tiny conservatory flashing the moonbeams back. He heard the soothing rush of the water in the mill 'leat' running the waste water into the river. In the wood behind, the owls were hooting. On such a night as this he had stood at his cottage window there below, two years ago, and resolved to realise his dream. He had accomplished what he had determined, and was he satisfied? He strained his eyes to see the old cottage; but it was dark; but, through the soft haze, he saw one golden pin-point, from where the post-office stood. Was that *her* light? Was she sitting there, at the window, looking up, out of the valley, at his grand house, on which the moonlight shone? What were her thoughts?

Richard Cable's breast heaved, and a choke came in his breath. He turned his face away and looked at the hills, at the gray moor frosted with moonlight, at the deep sky, and tried to spell stars in it, but could not, because of the suffused light. Then his eyes went back to the golden speck, the one spangle of yellow in the cold scene of white and gray and black. Then he stood up, and sat with his back to the door, and looked into the gloom of the interior, and down at the rectangular oblong patch of white, like snow on the floor, laid there by the moon. But he could not long study that. He turned on his seat, and once again the golden speck shot into his brain and down into his heart,

where it fell like a spark and burnt him, that he uttered a suppressed cry.

'It is all stubbornness and pride,' he said, rubbing the bench with his hand, as if to polish it. 'She is determined to show me that she can do without me. What does my mother mean by saying the rough life is killing her? She has chosen it out of obstinacy, to spite me. If I were to give her five pounds a week, she would throw them down at my feet. I can do nothing. If she is determined to kill herself, she must do so. She is proud. Why is her light burning now? She is working on late, that she may earn money and do without help. It is flint and steel striking, and the spark—there it is, and it is burning me.'

### THE OLDEST CITY IN THE STATES.

FIFTY-THREE years after the bold Spanish navigator Ponce de Leon had landed on the pine and palm covered peninsula that bars the Gulf of Mexico from the great Atlantic, and called it Florida—and fifty-three years before the Pilgrim Fathers set their feet on Plymouth Rock away in the far north, a Spanish expedition under the command of Don Pedro de Avilas disembarked from their old galleons on St Augustine's Day 1565, and made their camp upon the shore, where they ultimately built the town named after that great saint—the first, and consequently the oldest, of all American cities. And to-day, a very queer old place this city is; there is nothing like it in America; there is nothing so quaint and medieval in any city of that great continent. The oldest street remaining is but seven feet broad, and the balconies that project from the upper stories of the houses well nigh touch. You can easily shake hands with your opposite neighbour, should you be on sufficiently familiar terms to do so; and if one is not, and the vis-à-vis be vindictive, it would be better for a householder who is at the same time a lover of peace, to go farther up the street!

St Augustine is situated on a wide and shallow bay, across the mouth of which there lies the long narrow island of Anastasia. The town stretches along the shore for over a mile, and is protected from the ravages of the sea by a solidly built seawall, which is sufficiently wide on the top to form a pleasant lounge for the inhabitants in the cool of the evening. About half-way along the irregular line of houses that faces the sea there opens a fine large square, the Plaza de la Constitución. This Plaza, which is several acres in extent, is surrounded by buildings, a few of which are of great interest—notably, the cathedral of St Joseph, the old slave-market, and the two fine obelisks that are respectively commemorative of the granting of the old Spanish constitution to the city, and of the services performed by the St Augustine soldiers who fell when fighting in the Confederate army. On the latter monument there is a quaint inscription: 'They have crossed the River, and rest under the shade of the trees.'

At the eastern end of the Plaza, and overlooking the harbour and sea-coast, there stands the old slave-market, now happily disused, and only remaining as a relic of the state of things 'befo' the War. There are no walls—simply a deep roof

supported on fourteen pillars, seven a side, and surmounted at one end by a cupola, from which there rang the notes of the bell that announced a sale of slaves. The building is about fifty feet long and thirty feet broad. As one stands under the shadow of the roof and looks out on the gay aspect of the Plaza, thronged by rich and well-dressed people from the North, with here and there a sauntering, staring, and unmistakable Briton, it is difficult to retrace the last generation backward to those days when the sleepy old Spanish town was periodically aroused by the clangour of the bell that bade the people gather together to examine and buy human flesh and human lives for household chattels. It is difficult to picture the huddled group of frightened negroes—husbands and wives, parents and children fearful of being separated—in the St Augustine of to-day. Quaint and old-world-like as it is, the progress of the last decades has set its print upon the place, and the darkest blot on these genial southern scenes has been removed for ever.

On another side of the Plaza is the old cathedral. It has a well-designed west front, and a Moorish belfry for four bells, each in a separate niche—three below and one above. They are the oldest bells in America, and upon one is the date of 1689. Inside the cathedral there is an imposing high-altar, with a great solid silver lamp hanging before it and continually burning; and on the south wall of the nave is a queer old picture representing the first mass said at St Augustine. Reared on an improvised platform, an altar is depicted, adorned with crucifix, candles, and missals. The priest is elevating the Host, and his assistant is ringing the Sanctus bell. Gathered around, the armed warriors of Don Pedro are bowing low before the sacred sign; while the trumpeters and standard-bearers, and the ships in the offing with their cannon, are saluting the moment of consecration. The interest of the picture is heightened by the surrounding palm-trees and the groups of friendly Indians, who, with awe and curiosity, are imitating the action of the white men.

The great feature, however, of St Augustine is Fort Marion. It is built near the edge of the shore, and is defended from the sea by high and massive ramparts, which form, like the seawall of the town, a favourite promenade for the St Augustine folk. Fort Marion, which in the time of the Spaniards successively bore the names of San Juan de Pinos and San Marco, and only received its present name from 'Uncle Sam,' when Florida was bought from the Spaniards by the United States early in the present century, is a fine specimen of military engineering. It covers about four acres of ground, and its walls, which have Moorish turrets at the angles, are over twenty feet in height and twelve feet in thickness. It is built on rising ground, and commands the sea-entrance as well as the city and harbour. Like all the old buildings of St Augustine—the cathedral, the city gates, the convent, seawall, and old houses—it is built of *cogina*, which is a shell conglomerate formed by the action of the sea-water upon the shells and sand. An immense quantity of this conglomerate is found on Anastasia Island, where all the *cogina* used in St Augustine has been quarried.

The outside view of Fort Marion is imposing,

and the interior is extremely interesting. From the outer ramparts a drawbridge leads to the gateway of the fort. Over this gateway there is a large slab of stone engraved with the Spanish arms. Passing through, one comes into an open court about a hundred feet each way, which at the present time is almost entirely occupied by the wigwams of the imprisoned Apaché Indians. Some five hundred of these redskins are kept here by the United States government. They were taken captive by the various expeditions sent against them in Arizona, New Mexico, and the neighbouring territories, where for many years they have been a danger and a terror to the white settlers. All of these Indians were taken red-handed in their war against the whites, and are accordingly imprisoned for an (as yet) undetermined period. The attitude of the United States government toward the Indians is peculiar. They are not regarded as foes or as rebels, but as troublesome and ignorant children or wards. The position of the government is that of a parent or guardian; and while the Indians that are taken prisoners are kept for many years, if not for their lives, in that condition, they are well looked after, and are paid for the work which they are required to do. Most of the children are removed from their parents and sent to semi-military schools, where they are taught English and the elements of education together with some useful trade.

These Apachés, like Indians generally, are taciturn, but 'cute'; they appreciate the value of the dollar as highly as any 'Down-easter' does. They are allowed to sell the bows and arrows, rude musical instruments, moccasins, toys, and other simple things that they make, to the visitors at St Augustine, who while away a good deal of their time in watching them at their work and games. Their chief amusements are shooting with the bow, which even small children do with marvellous skill; indulging in a game somewhat like quoits; and playing on a rough sort of fiddle, made out of a large bamboo cane, with a minute fiddle-bow. From this simple three-stringed instrument they manage to get a barbarous kind of melody. Many of the shooting-bows they make have the English alphabet painted on them in black paint and various shades of ochre; and in other ways they are proud of showing-off their attainments in the English language. The writer bought one of these bows for a dollar, and a bamboo fiddle for fifty cents. The latter is curiously painted in geometrical patterns with red, blue, and green colour on a ground of yellow ochre. Some of the Apachés are very clever at embroidering leathern quivers, belts, and moccasins with coloured silks, wools, beads, and wire.

The incongruity of some of their costumes is amusing. The great ambition of an Indian seems to be to possess a flannel shirt and a pair of high boots. It is comical to watch a silent and solemn-looking Indian, highly ochred, strutting about in a flannel shirt, a huge blanket, high boots, and a perfect innocence of anything in the way of breeches! On the other hand, some who have these desirable articles of apparel, are shirtless and bootless! There are indeed few who have not in one way or another supplemented their wardrobe by incongruities acquired by barter or gift.

Queer enough it seems to see these Indians living comfortably and apparently happily within the old Spanish fort; for many a time in the past has this courtyard, with its bastions and casemates and embrasures, been thronged with panic-stricken refugees from the city, and hundreds of excited soldiers strenuously resisting the attacks of foes. Englishmen as well as Indians have repeatedly and unsuccessfully attacked Fort Marion; but the old order of things has indeed passed away. Of the hundred guns that once formed its armament, not a half remain, and the garrison of to-day is still smaller in proportion. The dark dismal dungeon underground, the iron cages hung upon the wall, and the chains, with iron bracelets, that are attached to the floor, are no longer used for captured foes, and have fallen into decay. The days of tragic scenes are indeed over; and the only changes that pass upon the gray old silent fort are those that are made by the hand of time and the remorseless northern tourist!

## THE OLD WAY AND THE NEW.

### CHAPTER III.

MATTHEW RODING at this time was close upon fifty years old, but, like his father, he scarcely looked his age. He was a broad-shouldered, well-built man, with prominent features of a somewhat aquiline type. His dark hair and bushy whiskers showed here and there a silvery streak, and the crow's-feet at the corners of his cold gray eyes had become of late more numerous than he liked. He had a long upper lip, and a firm-set mouth, which, however, could on occasion break into a very pleasant smile. His laugh, though rarely heard, was mellow and spontaneous. His general air and expression were those of a strong-willed, self-opinionated man, who believed greatly in himself, and would strive his utmost to impose that belief upon others. He was carefully but not too showily dressed; in such matters he knew how to preserve a *juste milieu*. An expensive orchid decorated his button-hole.

As soon as he entered the room, his wife rose and touched the electric bell. A moment later, a servant brought in a breakfast equipage for one person.

'How late you are this morning, dear,' said Mrs Roding as her husband seated himself at table. 'I began to get quite fidgety about you.'

'Had too much of that confounded Madeira last night,' he replied in his quick, laconic way. 'Made me as sleepy as a top this morning. I must fight shy of Madeira after the second glass in future.—Hasn't Grigson arrived yet?'

'I've seen nothing of him. At what time did you expect him?'

'At ten-thirty sharp, and now it's ten forty-five. What can the fellow be about?'

'Then you are not going to the City to-day?'

'No. Luncheon is ordered at the *Star and Garter*, Richmond, for one-thirty sharp. First meeting of the Directorate of the Patent Asphalt Roofing Company. A pretty directorate, forsooth, if the world only knew it! What gormandisers some of those fellows are! Only provide them with plenty of turtle and champagne, and you can get them to put their names to anything.'

Then, after a pause: 'Tilly, somehow your breakfast doesn't seem to go down this morning.' He was careful never to call his wife 'Tilly' except when they were alone.

'Is there nothing that will tempt you? I thought, perhaps—'

'No; can't eat; no appetite. I'll try a B.-and-S. presently.'

The *Times* on its arrival each morning was taken up immediately to Matthew Roding's room. He had brought it down under his arm, and he now began to run through the City article again. While thus engaged, a loud double-knock resounded through the house, and a few moments later the page brought in a telegram on a salver. 'Any answer, sir?' queried the youth.

'Wait,' said Matthew as he tore open the envelope. Telegrams with him were matters of almost hourly frequency. His face flushed a little the moment he saw the enclosure. 'From Sandalar,' he muttered under his breath. 'Good news or bad?' Then to the page: 'No answer.'

The cablegram, for the message was from America, was written in a cipher, the key to which was contained in a small private memorandum book which Matthew carried in an inner pocket. Placing the key before him, and taking his pencil and a scrap of paper, he proceeded to translate the message letter by letter into the language of everyday life. When the translation was finished, it ran as under: 'Mine flooded. Will take months to pump dry. Will delay sending official message for three hours, so as to give you a start. You know what to do. Don't forget that I stand in with you.' The moment Matthew Roding had made himself master of the last word, he started up from his chair, a great light of exultation shining in his eyes. 'If Sandalar keeps his word, I ought to clear four thousand by this coup,' he said aloud. For the moment he had forgotten that he was not alone. 'Three hours' start—a hundred and eighty minutes. Not long, and yet it ought to be enough.'

His wife merely looked at him and said nothing. She knew that in business matters he was not a man to bear questioning even by her—nor, indeed, did such subjects possess much interest for her.

'If Grigson is not here in five minutes, I must go myself,' continued Matthew, as he crossed to the sideboard and proceeded to concoct a mixture of brandy-and-soda.

At this juncture, another knock was heard, and next minute a tall, fair, fashionably dressed young man was ushered into the room, who was carrying a bulky portfolio under one arm. It was Grigson, Mr Roding's confidential clerk. 'Sorry to be behind time, sir,' he said. 'Cab-horse slipped down just this side the bridge; had to walk a quarter of a mile before I could find another hansom.'

Mr Roding seemed scarcely to hear his explanation. 'I'm glad you've come,' he said. 'You have a cablegram for me, haven't you?'

'Here it is, sir. Arrived five minutes before I left the office.'

Matthew tore it open. It was a duplicate of the one he had already received. One had been sent to his private address, the other to his office in the City, to insure that if one missed, the other

should reach him. Turning quickly on Grigson, who was emptying the portfolio of its letters, prospectuses, and documents of various kinds, Mr Roding said: 'I want you to rush off to the nearest telegraph office, and, without losing a minute, wire Bateson to sell every scrap of Yucatans he holds in my name. Tell him I shall expect him to have got rid of the last of them by two o'clock to-day.'

Grigson stared a little at his employer. 'Beg pardon, sir, but do you really mean Yucatans?'

'I do.'

'Of course you know, sir, that they went up an eighth yesterday, and may possibly go up another to-day?'

'All that is known to me, and still I say sell—sell—sell without a moment's delay. Now, hurry off, because every minute's of importance. I'll run through the letters while you are gone.'

As soon as the young man had left the room, Matthew rubbed his hands gleefully and broke into one of his rare laughs. 'Four thousand pounds! Not such a bad morning's work—eh, Tilly?' he remarked jocosely to his wife.

'No, indeed, Matthew. I'm sure I don't know how you do it, but what you call "business" is all a mystery to me.'

Her husband said no more; he was deep in his correspondence.

Mrs Roding waited for her opportunity, as she was in the habit of doing whenever she had anything particular to say to her husband. 'My dear,' she said at length, as Matthew leaned back in his chair, tapping his teeth with his nails, as he had a trick of doing when turning over a doubtful point in his mind, 'I should like a few words with you about next Wednesday's dinner-party.'

'They must be as few as possible, then,' he answered with a glance at the clock.

'I suppose you wish no expense to be spared?'

'Certainly not. Don't forget to have plenty of ferns and exotics. They look well, and can always be got on credit. I will hire a man-cook for the occasion from the place where I lunch in the City. I am especially desirous that the dinner should be a success.'

'I wish, dear, you would spare me a cheque for the payment of the new piano. The bill came in quite three months ago, and I have had to put the people off twice within the last few weeks. And there's the two brougham horses not yet paid for. A man called yesterday, and was really quite insolent when I told him the matter had escaped your memory.'

'Confound his insolence!' exclaimed Mr Roding with much emphasis. 'Is a man, whose whole mind and thoughts are immersed in immense speculations involving hundreds of thousands of pounds, to have his life worried out of him for the sake of a few paltry hundreds? Let the rogues wait. They know how to charge enough, in all conscience: cent. per cent. clear profit, if they get a fraction; and I shall not pay them till it suits my convenience to do so. Just at present, I want every farthing of my available capital for other purposes than to pay tradesmen's bills.—By-the-by, as I was passing Hunt and Roskell's yesterday I saw a pair of diamond earrings which I think would suit you admirably. The price was rather stiff—a hundred guineas.

However, I ordered them to be sent on. The bill won't come in for six months, and by that time, if all goes well, a hundred guineas more or less will be a mere bagatelle.'

Mrs Roding rose and crossed to her husband's chair and kissed him: she loved jewelry almost better than anything else in the world. 'A month ago you promised me another pony to match the one in my basket carriage,' she ventured to observe as she went back to her seat.

'So I did. I've so many things to think of that I had quite forgotten it. I'll tell Grigson to try and find one for you; he understands such matters better than I do.'

At this moment in rushed Master Freddy. His first act was to climb on his father's knee, pull his face down, and kiss him. 'It's Grandad's birthday, pa!' he said. 'Won't you go and wish him many happy returns? Grandad would like us all to go and have dinner with him in his room to-day. Why can't we, pa?'

'For shame, Freddy! How dare you burst into the room in that rude way!' said Mrs Roding, before her husband could interpose a word. 'Your manners are becoming more unbearable every day. It's high time you were sent to a boarding-school. I told your grandfather less than an hour ago that it was quite out of the question for your father and me to dine with him to-day. I can't think what put such a ridiculous notion into his head.'

The boy made her no answer, but stood with one finger pressed to his lips, staring at her with round, serious eyes.

'I'm busy just now, Freddy—very busy, as you see,' said his father; 'but I'll wish Grandad many happy returns later on.' Then he turned to his letters again.

Mrs Roding, with an imperious gesture, unseen by her husband, motioned to the boy to leave the room. He went without a word.

There was a minute or two of silence, then Mrs Roding said: 'Really, my dear—and I hope you won't think me prejudiced in saying so—your father is becoming more tiresome and troublesome every day.'

'I'm sorry to hear that,' remarked her husband without taking his eyes off the letter he was reading.

'The way he spoils that child is insupportable. And then the vile odour of the tobacco he smokes seems to pervade every room in the house. Further than that, in fine weather he nearly always plays on his violin for a couple of hours in the garden, which, to say the least, must appear very strange and eccentric conduct to our neighbours.—Don't you think, dear, it would be doing him a genuine kindness if you were to find a little cottage for him a few miles out in the country—a cottage near a railway station and a church—with a nice bit of garden attached, in which he could potter about as he liked, and with some elderly person to look after his little comforts? I am sure that in such a place he would be far happier and more contented than he can ever expect to be here.'

'I doubt that very much, Tilly,' answered her husband, whose attention she had now succeeded in arresting. 'Besides, a bargain's a bargain, and you know what I promised the old boy when he made over the business to me. Think, too,

of all that we owe to him. To do as you suggest would seem like the basest ingratitude.'

'But if he himself were to suggest such a plan?'

'That would alter the case materially,' answered her husband dryly. 'But I don't in the least think he's likely to do that. I think you may safely count on him as a fixture—one of those fixtures one takes at a valuation.' He nodded and smiled at her, and then went back to his letter.

Mrs Roding said no more. She had gained her first point, and knew when to stop; but with her the project was only shelved, not done with.

This was evidently destined to be a morning of interruptions. Presently, a rat-tat-tat so loud and prolonged resounded through the house that Mrs Roding fairly jumped in her chair. 'Goodness gracious! who can that be at this time of the morning?' she exclaimed.

Her husband said nothing, but waited. 'Lady Pengelly!' he exclaimed in some wonderment, as he read the name on the card which a servant brought in a minute later.—'Don't know her from Adam. What on earth can she want with me?'—Then to the servant: 'Where is her ladyship?'

'In the small drawing-room, sir.'

'Say that I will be with her in one moment,' Turning to his wife, he added: 'It is probably you, my dear, she wants to see, not me. There's some so-called charity or other in the wind, I'll be bound. Many of these titled ladies are said to be most accomplished cadgers.'

But already Mrs Roding was deep in Debrett. As Matthew entered the drawing-room, Lady Pengelly rose and greeted him with an elaborate courtesy. 'Mr Roding, I presume?'

'At your ladyship's service.—Pray, be seated, madam.'

She smiled, and sat down again. Matthew seated himself deferentially some distance away.

Lady Pengelly was a much faded woman of fifty or thereabouts; thin and angular in person, but exceedingly upright; with eyes and hair of no colour in particular, but with a thin, straight-cut mouth expressive of considerable determination and fixity of will. Her dress was worn and old to the verge of shabbiness. Mrs Roding—so she afterwards averred—would not have been seen in such a gown for the world; but then one of the two would have lent a distinction to rags, while Wörth himself would have failed to make the other look quite a lady.

'Before entering on the business which has brought me here,' began her ladyship in a pleasant but somewhat artificial voice, 'I must apologise for making my visit at such an unconscionable hour, and my only excuse must be, that knowing the best time to find you City gentlemen is early in the day, I was afraid I might miss you if I delayed my visit till after luncheon. Then, again, I have also to apologise for calling on you at your private residence instead of at your office. It was by the advice of Major Donovan that I did so. You know Major Donovan of course?—Yes. Had I not found you here, I should have gone on to the City; but really, it was not very much out of my way to drive round by Tulse Hill. I had no idea it was such a charming neighbourhood.'

'I am pleased your ladyship has found me at home,' said Matthew, who was wondering more and more as to the object of her visit. 'As a rule, I leave for the City long before this hour, but fortunately to-day has proved an exception.'

Again her ladyship smiled, and inclined her head. 'And now for the reason that has brought me here,' she resumed. 'Knowing how valuable your time must be, I will endeavour to be as brief as possible. It has been intimated to me, through more than one source, Mr Roding, that you are connected, either as chairman or director, or in some other capacity, with several of the new Companies—or syndicates, don't they call them?—which have already appeared, or are about to make their appearance, before the public.'

Mr Roding gravely inclined his head.

'Such being the case, would it not be possible, may I ask, by bringing your influence to bear, to obtain for Lord Pengelly—whose income, I am sorry to confess, is a very limited one for a man of his rank—a position on one or more of the directorates of these new Companies, in return for the use of his lordship's name, which could scarcely fail to have considerable weight with the public, knowing, as the majority of people must who know anything at all of such matters, that he comes of one of the oldest families in the kingdom and is first-cousin to his Grace of Leamington?' She had leaned forward a little in the earnestness of her appeal, but now drew herself up, fixed her lips rigidly, and stared straight at Mr Roding.

The latter tapped his teeth with his nails thoughtfully for a few moments before answering. Then he said: 'As it happens, singularly enough, we are in want of a few good names to complete the directorate of a scheme of more than usual promise and magnitude which will be launched before the public in the course of a week or two. I shall have great pleasure in proposing Lord Pengelly's name to my colleagues for one of the vacancies in question. The duties, I may add, are not especially onerous. The Board will meet two mornings a week for a couple of hours, after which there will of course be a little luncheon.' Mr Roding paused, and twisted a finger in his watchguard.

'And the honorarium?' queried her ladyship eagerly in a voice that was scarcely above a whisper.

'Will, in *this* case, be at the rate of five hundred guineas per annum, paid quarterly in advance. His lordship will, of course, have to qualify himself by taking up a certain number of shares.—But that is a little detail,' added Matthew with a smile, 'which may, I think, be safely left for me to arrange.'

'How can I thank you sufficiently, Mr Roding?' said her ladyship, her faded face flushing for a moment and then paling again. 'I was indeed well advised in coming to you.—You are married, I believe?—at least so Major Donovan gave me to understand.'

Matthew Roding bowed assent.

'Ah, in that case I must beg of you and Mrs Roding to favour me with your company at my "At Home" on Thursday next. I will take care that cards are sent you. Only a small party—the Countess of Clandooley and a few others,

to whom I shall be happy to introduce Mrs Roding.'

Her ladyship rose as she finished speaking; seeing which, Matthew did the same. 'Both my wife and myself will feel highly honoured in accepting your ladyship's invitation,' he said.

'By the way, there is one trifling detail which it may perhaps be just as well you should be made aware of,' said her ladyship, as if suddenly struck by an afterthought. 'Lord Pengelly is subject to fits now and then. Nothing in the slightest degree dangerous, or disagreeable to others. All he requires at such times is to have his neckcloth loosened and a little cold water dashed in his face, after which he will come to himself in five minutes. I trust that a circumstance so trivial will in no way militate against his position as a director?'

'Your ladyship may make your mind easy on that score. We have two directors already who are nearly stone-deaf, and another who invariably goes to sleep five minutes after the meeting has begun.'

So, with a few words of polite leave-taking, Lady Pengelly went her way, Matthew himself ushering her to her carriage, which he did not fail to notice was what he termed to himself 'an uncommonly shabby turnout.' Neither did Mrs Roding, who was peeping unseen through the blinds of an upper window, fail to notice the same fact. 'Very hard up, that's clear,' muttered Matthew to himself as he went back indoors. 'Of course, if it hadn't been for that, she would never have come near me. But then, her husband's an earl—is he an earl, by the way, or what? Must ask Tilly; she's sure to know. Anyway, his lordship is first-cousin to a duke. A very good catch for our forthcoming prospectus—a capital catch!' He paused for a moment or two by the barometer in the hall, as if to consult it, but his thoughts were somewhere else. 'In five years' time, if things go on as swimmingly as they are going now, I ought to be worth half a million at the least. It took my father thirty years to make a few paltry thousands. We don't do things in that humdrum style nowadays. Five years hence I mean to write M.P. after my name. Later still, a title may follow. Why not? Money can do anything in these times. Sir Matthew Roding, of Cradstock, Cumberland, wouldn't sound amiss.' He dug his hands into his pockets, and went back to his letters, whistling softly under his breath.

When he left the house half an hour later, he had forgotten all about Grandad and his birthday. After all, it was a mere trifle, and just now he had matters of much greater moment to occupy his thoughts.

#### THE NERVOUS ORIGIN OF COLDS.

UNDUE exposure to cold and damp is the only source of colds or catarrhs, in the limited estimation of popular opinion; and when it has provided stout boots, comfortable wraps, a serviceable umbrella, and a mackintosh, that authority has furnished a fully equipped weapon to beat off the unwelcome domestic complaint. When, as often happens, a cold is contracted in spite of these unimpeachable precautions, popular opinion is

puzzled beyond measure how to account for the remarkable circumstance.

Cold, however, is not the only factor in the production of catarrh. There is a collateral cause, and a most important one, in certain depressed conditions of the nervous system, which is too little known and appreciated. In healthy conditions of the nervous system, provided reasonable precautions are taken against cold, there is enough vitality in the organism to resist its injurious influence. The nervous system is, in fact, the guardian, controller, and prime regulator of animal heat or body temperature, and its slightest failure to fulfil its responsible duties—the least relaxation of its constant vigilance—renders us liable to fall a prey to cold.

The following supposititious cases will afford an illustration. An individual, who habitually drives about in an open conveyance with perfect freedom from catarrh, happens on one occasion to fall asleep when he is out, and the very next day has cold. The explanation of the phenomenon is to be found in the fact, that during sleep, nervous energy is lowered, and the system therefore less able to withstand the injurious effects of cold. If we assume that the individual was also in a state of intoxication at the time, the damage done by cold would be more serious, as the depression from alcohol is superadded to that of sleep. It is, therefore, not surprising to find that inflammation of the lungs is frequently contracted under such circumstances. We instinctively acknowledge the nervous depression during sleep, by taking the precaution to throw a rug over the knees before our forty winks on the dining-room sofa.

A timid woman comes home one night pale and ghastly with fright, having encountered a spectre clad in white, which she calls a 'ghost.' In a day or two she develops a cold, for which she cannot in any way account. Fear acts as a depressant to the nervous system, crippling its powers of resisting the action of cold; hence the phrase, 'shivering with fear.' Similarly, innumerable events of daily life tend to irritate, depress, or excite the nerves, and render them unfit for maintaining the body-temperature against the fluctuations of weather and climate. During these unguarded moments, a trifling exposure to cold or damp is sufficient to induce catarrh. It is desirable, therefore, that it should be generally known that stout boots, umbrellas, and wraps, though excellent preservatives in their way, are not by any means the only precautionary measures to be adopted; that we must endeavour to strengthen the nervous system, if it be defective; and that, when we are compelled to expose ourselves to cold or wet when the nerves are depressed from temporary causes, such as fatigue, anxiety, grief, worry, fear, dyspepsia, or ill-humour, we should be specially careful to guard against cold.

Let us now dissect the morbid condition known as catarrh, and verify, if we can, the theory of its nervous origin. What is a cold? To answer this question we must first explain what is meant

by animal heat. Man is what is known as a warm-blooded animal, that is, he possesses the capacity under all circumstances of maintaining an average uniform temperature. Whether he live in the frost-bound Arctic regions or in the burning deserts of Central Africa, the heat of the blood is the same. In summer and winter alike (if we except, perhaps, certain abnormal states of the body due to the excitation or depression of the vital processes in various diseases), the average temperature of the human body is 98.4° Fahrenheit. Now, this is a remarkable fact, as, in view of the peculiar source from which animal heat is derived, namely, from the combustion of used-up tissue with the oxygen of inspired air, it stands to reason that the heat of the blood cannot remain constant for five minutes together, as with every movement of our muscles we add coals to the human fire; and the regulation of all our movements, so as to preserve a uniform temperature, would be an utter impossibility. How, then, is the object achieved? The superfluous heat is disposed of by conduction and radiation in the capillaries of the skin, and by evaporation through the sweat glands and air-passages; and when there is no superfluous heat to dispose of, the skin contracts to prevent evaporation of moisture from the surface. Thus, when we exert ourselves, there is increased waste of tissue, and accordingly we both pant and perspire. When we are cold, on the other hand, the skin is very far from being moist, and contracts, presenting what is called the 'goose-skin' appearance. Now, these functions are under the immediate control of the nervous system. Cold acts on the latter in such a way that the vessels supplying the skin are constricted, and the flow of blood to the surface checked, loss of heat by conduction, radiation, and evaporation being thus prevented; while heat, on the other hand, relaxes the blood-vessels and favours the escape of heat from the body. It will thus be seen what an important part the nervous system plays in the maintenance of animal heat.

Whenever, owing to any derangement of the nervous system, the perfect maintenance of animal heat fails to be carried out, disorder ensues, the mildest form of which is a catarrh, namely, the blocking up of the skin or outer surface of the body, with the consequent transference of the excretion to the mucous or inner surface. The deleterious matter which ought to have been removed by the skin, irritates the blood by its retention there, and ultimately expends itself by the nose and throat. For example, if the nervous system be feeble, sweating would probably be induced, and a consequent loss of heat, irrespective of the needs of the body; in which case a cold would most probably follow. As a fact, there are many people with feeble nerves who readily perspire in the coldest weather, and are in consequence liable to frequently recurring colds. The nervous origin of colds also furnishes us with a clue to its treatment in the early stages. The whole history of a cold shows it to be essentially and primarily a state of collapse, demanding early recourse to a stimulating plan of treatment. There is no more dejected mortal than a patient in the first stage of cold, and both his physical and mental condition point to nervous collapse. Hence, we believe the great success of camphor and ammonia inhalations in

the early stage. It has also been repeatedly found that two or three glasses of wine have cut a cold short, when taken at the first appearance of the symptoms.

### A TALE OF A TIGER.

UNLIKE most Anglo-Indians, I am nothing of a sportsman. Like the rest of my tribe, I have always possessed a Colt's revolver, with a sufficient complement of cartridges; nor have I ever been without a good central-fire, breech-loading double-barrelled gun. But the former has, through all the years of my Indian career, waited mutely for the burglar, who, thank goodness, has never invaded my bachelor bungalow; and the latter has chiefly justified its continuance in my possession by giving my faithful bearer something to do in cleaning its almost unused barrels. When I say that my gun is a choke-bore, you will understand that it is more suited for snipe-shooting and the pursuit of ducks and plover, than for the destruction of larger game. However, I had been warned, before I began my Indian career, that opportunities of sport were likely to be thrust upon me without my seeking; and such I found to be the case in more than one instance.

In 1880 I was in camp at the foot of the Tipperah Hills. My tent was pitched under the shade of a vast banyan tree, and on the bank of a picturesque little hill-stream, close to the station where His Highness the Maharajah of independent Tipperah collects tolls from such of our fellow-subjects as cut timber in his vast forests. Hard by was the collection of thatched huts in which lived the Maharajah's agent, a Mohammedan gentleman of much local influence, hospitable, as almost all Indians of position are hospitable, especially to those in authority over them, plausible and pleasant in his manners, as Mohammedans nearly always are, and bent upon showing me—who was, alas, quite content to take him at his word—that he was as good and staunch a sportsman as any Sahib of them all. For days before my arrival, the hill-folk had been warned to look out for traces of tigers or bears; and it was with obvious pride and satisfaction that my friend announced to me, one lovely cool morning in December, that he had succeeded in putting nets round a patch of jungle in which lurked a fine tiger. There was nothing for it but to make a hasty breakfast, and to start with my trusty gun aforesaid over my shoulder for the agent's house. Unfortunately, the only cartridges I had with me were loaded, if you will believe me, with snipe-shot. I was loth to damp my friend's enthusiasm by admitting that I was insufficiently armed for a tiger-hunt, and I resolved to trust to his skill in forest warfare for the conquest of the tiger and the safety of our skins. To me was allotted the post of honour on the back of a small and, as it seemed to me, extremely nervous young elephant, whose movements were so erratic that it was as if I could do to hold on to the ropes by the 'pad' on which I sat was bound; and

I could not help wishing that I were gifted, like an Indian god, with an extra pair of arms for the due management of my weapon. To make matters more uncomfortable, the mahout, or driver, behind whose back I was perched, was either very cold or very frightened, for his teeth chattered dolefully, and, unlike most of his class, he seemed unwilling to talk.

We were a picturesque procession enough, as we started for the forest. I led the way on my elephant; next came my Mohammedan friend, with a gaudy skullcap perched very much on one side of his flowing and curly locks; over his shoulder was slung an ancient single-barrelled, muzzle-loading gun; and it was no small comfort to notice that, whatever my own inward doubts and tremors might be, my friend at least was full of enthusiasm and pleased anticipation of an exciting day's work. Behind him came two or three Mussulmans armed like himself; and the rear was brought up by a miscellaneous crowd of Tipperahs, Manipuris, and plains-people, who had been impressed as beaters.

It was a lovely morning, bright, clear, and cool; and, even in my somewhat excited state, it was impossible not to admire the lovely glimpses of forest scenery which opened to our right and left as we made our way slowly up the bed of the little stream by which my tent had been pitched. Every now and again, we passed a small Tipperah village, the wooden houses raised, like those of all the Eastern hill-folk, on piles some six or seven feet above the level of the ground. In one, an ancient headman, gray and bent with age, advanced to wish us success in our effort to rid the country-side of a pest whose ravages had thinned the cattle of the neighbouring villages woefully; and as I acknowledged his salaams, I heartily wished that my place could have been taken by some one better armed and more skilful than myself. But soon the villages grew rarer; the patches of golden paddy, set in a frame of dark dense jungle, more unfrequent. We heard the clear shrill cry of jungle-fowl in the woods, and the cooing of innumerable doves in the feathery branches of the wild bamboos. Soon the path became almost impassable; and the elephant and its driver were busy tearing down branches and clearing a way for us through the dense undergrowth of tree-fern and gorgeous flowering creepers. Where the shade was densest, the air struck chill even to my well-clothed limbs, and I could sympathise with the tremors of my half-naked mahout; and again, when we emerged into a clearing, deserted by the migratory cultivation of the hill-people, the sun struck fiercely, and rendered the protection of one's huge sun-hat very grateful. At last, and, as I thought, only too soon, we reached the patch of forest which had been netted. The beaters disappeared by jungle-paths to right and left; the Mussulmans climbed into convenient trees, and, with an occasional friendly shout to me, peered anxiously into the dense jungle below. Presently, we knew that the beating had begun, for we heard the distant sound of shouts and tom-toms, a sound which raised a strange elation and excitement even in my unsportsmanlike bosom, and, for a moment, I forgot that I had in my hands only a choke-bore gun loaded with snipe-shot; that I was holding with might and main to my

uncertain seat on a nervous and untrained elephant; and that, if the tiger charged, I should be in a situation of very considerable danger. Fortunately, there was not much time for thought, for the roar of voices and of drums came rapidly nearer, and my Mohammedan friends grew more eager and excited. At last, close on my right, and with startling suddenness, I heard the mighty roar of a tiger. Impelled by I know not what impulse, I managed to draw both triggers of my gun, and, almost simultaneously, I heard two other shots fired in rapid succession. But the proximity of the tiger and the sound of firearms were too much for the nerves of the elephant, or the mahout, or both, for the next moment I found that I had dropped my gun, and was holding on for dear life to the ropes, as the terrified beast beneath me plunged headlong through the forest.

How far we went before the mahout regained his control over the beast, I cannot say; and it is with unbounded thankfulness and wonder that I think, even now, of the escapes I had from the overhanging boughs and coils of clustering creepers through which we forced our headlong way. As often happens in situations of extreme peril, my mind was singularly clear and tranquil, and, amongst other incongruous thoughts, I remember wondering what a new Byron would make of the story of an Indian Mazeppa on a frightened elephant. At last, however, the mahout was able to guide the animal's movements; and after a long and weary journey—very slow, because we had to clear our way as we went—we emerged into the open paddy-fields. It was with a sense of inexpressible happiness that I saw my white tent gleaming under the dark spreading branches of the banyan tree and saw my servants awaiting my return. But I was not a little astonished when I found that they were gathered round the body of a huge tiger, which they said the agent had sent over as the spoils of my gun. I had heard, it was true, of a desperate man who had slain a tiger at close-quarters by firing a charge of small-shot straight into its eyes. But I had fired almost at random and at a considerable distance; and an examination of the animal's body showed that it had been killed by a lucky bullet which had pierced its heart. My Mohammedan friend presently appeared in person, and loaded me with undeserved praises of my coolness and skill, and apologies for the unsteadiness of his elephant. It was obviously useless to tell him my real reasons for being positively certain that the magnificent beast which lay at our feet had not fallen to my gun; but I was able at last to persuade him that my elephant had turned to bolt before I could take a correct aim, and so to induce him, not very unwillingly, to accept the credit of the tiger's death. He insisted, however, upon giving me the skin, which lies before me as I write, a reminiscence of my most exciting tiger-hunt.

I am older now and, I trust, wiser. Certainly, no consideration of pride or profit would now induce me to go shooting tigers with snipe-shot; and my only excuse for venturing to inflict the story of a very foolhardy adventure upon you is, that the tale is strictly true, and there lies the skin to this day to testify to it. If ever I go tiger-shooting again, it shall be with a good

express rifle in my hand; and if I ever mount an elephant, I shall take care to ascertain that he can stand fire.

#### ROBURITE: A NEW EXPLOSIVE.

A new explosive, bearing the name of Roburite, has recently been brought before the public by Dr Carl Roth, an eminent German chemist, and bids fair to rank eminently with the explosives at present holding the market. The advantages claimed for roburite, as compared with dynamite, gun-cotton, blasting-gelatine, &c., are increased explosive force combined with a safety that is not merely augmented, but is declared to be absolute; for the new explosive consists of two harmless compounds, which can be kept separate, and even when mixed, require a special fulminate detonator to cause explosion—concussion, friction, or fire being equally unable to effect this.

For mining purposes, roburite should rapidly push its way, for, in exploding, it emits no flame or spark liable to ignite firedamp or coal-dust; whilst the amount of noxious gases generated is so little, that no small advantage accrues from its employment in tunnels, shafts, and other confined places where the workmen frequently suffer from foul air. An eminent authority on such matters has declared his belief that the substitution of dynamite for gunpowder has added ten years to the lives of our miners, so injurious to the lungs is the smoke of the older explosive. A further advantage should accrue in this respect, if roburite obtains largely in our mines and realises the expectations of its introducers. Roburite, it is further stated, will not deteriorate by keeping, and is not affected by extremes of temperature. In appearance, the new explosive is sandy and granular, not unlike coarse yellow sugar.

A series of interesting experiments, recently made at the School of Military Engineering, Chatham, with roburite in comparison with gun-cotton, dynamite, and blasting-gelatine, proved satisfactorily the sterling qualities possessed by the new explosive.

#### EARTH'S LAST KISS.

Earth's last kiss to the dying day  
Over the surf and the tawny sands;  
Lips are parted, and far away,  
A light goes down in the faint cloud-lands.  
Earth's last kiss ere the autumn star  
Shines like a jewel in Night's dark crown,  
And dusty blossoms from yon blue bar  
Sparkle and fling their radiance down

Earth's last kiss ere the seabirds scream  
Summer's farewell from the wildflowers' height,  
And winds steal forth from the cliffs' dark seam,  
Moaning their musical last 'Good-night.'  
Earth's last kiss, and the eyes are strained  
And arms outstretched, for the gloom draws nigh;  
But lips have met, and a love is drained—  
Earth's last kiss, dearest love, good-bye.

## HOLIDAY FRIENDSHIPS.

It is all over. The holiday outing, looked forward to for so long, has come and gone. The ever recurring query, 'Where are you going?' has been metamorphosed into, 'Where have you been?' Every other person you meet wants to know how you have enjoyed yourself; and whether, when you were here, you visited the crypt of this cathedral; and when you were there, you thoroughly explored the tower of that castle. One points out what you missed on the Matterhorn; another assures you, you have not exhausted the delights of Boxhill. 'Ah!' is the usual form, 'pity I did not know you were going; I might have put you up to a thing or two.' Still, deficiencies notwithstanding, you have to tell all about your doings. The interest taken in them is universal. They have a quite phenomenal attraction for your friends, which is only one degree less perplexing than the perpetual recital of other people's experiences at the best known of holiday haunts, to which you have to submit. This is the unfailing sequel of one's annual trip beyond the confines of daily toil. No one will let you rest; and only when you have exhausted your patience and satisfied a battalion of bores, are you able to escape from the purgatory of recounting your history during a month's absence.

Apart from this source of petty annoyance on your reappearance in workaday garb, ask yourself whether your holidays have fulfilled their roseate-hued promises. Have they brnshed away the official or professional cobwebs, and imparted vigour to the frame and lightness to the heart? Have they, in a word, given you new strength to face fresh trials and overcome the big difficulties of a small world? They have doubtless done several of these things, but they have done something more. Kenelm Chillingly described love as a disturbance of the mental equilibrium. One may, of course, have no mental equilibrium to disturb; mental equilibrium is given only to the chosen few; but if you boast anything like an approach to a stable mind, a holiday is the one

thing to render it unstable, for a while at any rate. You start off, seedy, perhaps, and with no thought save of enjoyment: you come back well and wretched. This may be your own fault, and the precise degree of wretchedness depends largely upon temperament; but wretchedness there generally is, nevertheless. You are dissatisfied; deny it, if you can; dissatisfied, not with the past, but with the present and the future. The only condition on which you can deny it is, that you have not realised the pleasure which you anticipated.

The reason of all this is perfectly simple. New sights, new life, new amusements, new faces, new friendships, new thoughts—these are the concomitants of a thoroughly happy holiday, and in proportion as they are appreciated, the return is made miserable. We come back to think of them, and to long for the time when we may go forth and meet them once more. Handsome men and pretty women—all more or less commonplace, it may be, but winning and kindly disposed—haunt the memory of those who have dined for a short time at a table where strangers meet and friends part. Vanity may have been flattered; self-interest may have been unduly watchful; or friendship pure and simple may have possessed the heart. You may have gone merely from one capital to another, from London dark and heavy, to Paris light and gay; you may have studied German life in Berlin or Vienna, or brushed shoulders with the modern Spanish *hidalgo* in Madrid, or wandered round that mystery of modern Europe, the Vatican, and marvelled at the self-incarceration—if that is not too strong a word—of its chief. You may have visited the Channel Islands, with their delightful admixture of British severity and French *abandon*; you may have bathed and lounged at Boulogne, or made yourself giddy on Alpine heights, or lived luxurious days in the shade of Southern orange groves; or even have idled in some not far-distant spot at home. It is all one. You get literally thrown off your balance, and come back to town with a strange sense of restless aspiration in the heart.

The table at which you are expected to sit, you are ungrateful enough to imagine, is not nearly so conducive to comfort and digestion as the one at which you have sat recently; the very chair on which you sit was not evidently intended for the reception of your goodly proportions; familiar faces are dull and uninteresting; old scenes have for the time lost their charm. And all this discomfort springs from a very vivid recollection of certain things said and done during a few weeks' sojourn from home.

Social relations are the chief elements of post-holiday disquiet. Our holiday probably has been passed in the midst of a select and more or less unchanging circle of pleasant people. We have had nothing to do but explore the neighbourhood in which we have found ourselves, write one or two letters—a little business which meant torture—read a favourite novel, and gossip to any extent. Talk around the hospitable and cosmopolitan mahogany of the boarding-house or hotel has been of a character quite different from that indulged in at an ordinary dinner; the company has been thrown together not for one meal only, but for three or four meals daily during many days, and what would have proved a merely formal acquaintance at the one, ripens at the other into a close friendship—assuming of course that conditions are favourable to such friendship. Chief among these conditions is sympathy, and where sympathy obtains, it is a magnetism which draws soul to soul irresistibly and speedily. Your host or hostess seats you beside some one whom in an ordinary way you may not dislike, but who is the last person to inspire you with a strong personal regard. A little later, the freedom of the drawing-room shows where reciprocity of respect and sentiment exists. It would be a curious and instructive experiment to place a large company round a table at one meal, seating them quite haphazardly, and then to ask them, a meal or two later, to choose their own places. The transformation at the end of a day or two would be somewhat startling, and would almost certainly be an index to the true feelings of the company individually and collectively.

A good deal has been said at various times against chance acquaintances; but it surely has been every one's experience to 'run across' some really worthy person at a strange holiday-haunted table. With many people, it is a constant experience, and consequently a source of equally constant chagrin. They meet those whom they fancy they would care to have as friends always; they spend most of their time together, and of course enter more or less into each other's confidence. Then comes the end of the holiday, and the four winds of heaven scatter the companions of several days broadcast, placing the widest geographical gap usually between those whose friendship has been closest. The return to work is made with a distinct sense of bereavement. For some reason or other, it is deemed inexpedient to strike up a

correspondence; and it is in keeping with perverse human nature that the longing to know more of each other should be enhanced by the fact that they have determined it is wisdom to forget. Few attachments are stronger than those formed promiscuously, especially where a certain bashfulness has preceded actual introduction and conversation; and to lose friends in the first blush of unalloyed good feeling may be more painful than to lose old friends. With old friends is kept up a correspondence for a period at least; and if it is dropped, it is dropped so gradually that the intimacy fades almost naturally. The casual friend of the summer outing goes his or her way, and if a letter passes, it is written with a 'What-is-the-use-of-it' sort of philosophy. Some friendships made in this manner become continuous and remain close; but in the majority of instances, they are the facts of a week or two, and the failures of a lifetime.

One is prone to believe that these new-found friends would, if circumstances permitted, prove the nearest and dearest one has ever had. All the experience of life and of a dozen friendships does not open our eyes to the fact that even the best of us are human, and that the happy and cheerful colours under which we see our friends of the holidays are not probably always flying when the holidays are over. The truth is that our regard for them is nothing more than infatuation born of idleness and bred of environment. Almost everybody, even those who believe themselves to be suffering from some fatal malady, are so friendly and pleasant, it would be a little strange if one did not catch the contagion of their affability. Young men and maidens are especially unfortunate in the effects of their holidays. They may behave with the decorum which the British matron herself would approve; they probably never escape her vigilant eye, and the opportunities for a good flirt are reduced to a minimum. Nevertheless, they lose their hearts. The 'panting tenant' of their bosoms has not yet been hardened by harsh trials. It is still susceptible to soft words. To make young people forget each other as easily as they can be brought together, is the most difficult thing imaginable. They have a knack of calling up from the recesses of their memories the faces and voices which they have grown in a few days to like, and possibly to love, and there is no being so restless for a time after a congenial holiday as they. They do forget naturally, in the course of weeks, the keen delights of the companionship of a few days which was cut in twain as precipitately as it was entered upon; but whilst the memory of it is green, it is entirely destructive of youth's mental peace.

Young and old, rich and poor, we take it, find something of this sort their general experience, and it is an experience to be commended. It shows the heart is in the right place. There are some men and women who never make real friends, or temporary ones either. They go away miserable, and they come back miserable. They are incapable of attachment, and make every one

feel inclined to give them a very wide berth. They are the bugbears of holiday life, and, luckily, are in a distinct minority. Even the bore, who will tell you all his affairs and give you the advantage of an overgrowth of second-hand ideas, is preferable to these unhappy creatures, who, forsooth! are on pleasure bent. Nothing satisfies them: they have not enough room for their elbows at table; they go without the mustard or the salt, because they will not place themselves under an obligation by asking you to pass it; they refuse to join in the good-will of the company in the drawing-room; they walk abroad alone; and the end is they make others miserable as well as themselves. Their absence is the only thing of which every one approves, and their departure for good comes like the bursting of the sun through recently clouded heavens. Thank God, these sad-souled grumblers do not constitute the many but the few among one's holiday friends. If they did, the conditions of holiday-making would be reversed, and the return home would be anticipated with as keen a joy as the departure from home now occasions in all true-hearted people.

All this may seem to say that holidays are a mistake. Not so. The toiler of eleven-twelfths of the year need not be dispirited. There can, however, be no question that, for some, holidays are a really serious matter, and the end of them comes with the wrench which follows the severance of a love-engagement. The lovesick swain is a not much more pitiable object than the friend-sick holiday-maker. But only rarely does harm come of the trouble of either of them. The sympathies of the latter have undergone more than one sharp bout, and his mind has discovered the peculiar significance of topsy-turvydom. To dwell in unaccustomed rooms, to live by the side of unknown people, and to sleep in strange beds, literally turns him inside out; and there is truth in his remark, that it will be long ere his heart will forgive him for the tax he puts upon its self-control. He is, however, none the worse for a little shaking up on new lines; and the moral which he should draw from his holiday experiences is, to beware in future of chumming too thoughtlessly. This, for two reasons. In the first place, he has little or no means of ascertaining who his new friends really are; in the second, if they are thoroughly respectable and worthy, the chances are he may never see them again after the holidays. It is quite possible to get attached to a person during a week; and if one is to return home to think of friendships rudely severed, holidays become somewhat of a nuisance, and one wants a day or two to settle down to work, instead of coming back invigorated and ready for anything that may crop up. Not the holidays, but holiday friendships are the mistake; and if most of us were wise in the future, we should break with work for a spell away with the determination not to strike up friendships at the hotel or boarding-house table except for extraordinary reasons. It is more conducive to happiness not to know nice people intimately, than to know them intimately—the word is not too forcible—for one week, and have to forget them the next. This is a somewhat stern and not altogether courageous doctrine. That the hint will be acted on is no more to be expected than that love itself will

vanish from the world; but if experience teaches anything, it is that holiday friendships—boarding-house and hotel friendships, at least—are the joys of a day and the worries of a month.

## RICHARD CABLE,

THE LIGHTSHIPMAN.

### CHAPTER LIV.—‘NO FOOL LIKE AN OLD FOOL.’

‘I suppose,’ said Richard Cable to his mother, ‘that *she* would not live in our old cottage? Not if I offered it her rent free?’

‘The cottage is mine, Richard, not yours. Perhaps from me she would take it, but not from you.’

‘Then you may offer it her.’ He had his hands in his pockets; he drew them sharply forth and began to hum a tune—it was the mermaid’s song from *Oberon*. When he thought of her, that tune came up with the thought. ‘Mother,’ he said, breaking off in the midst of the tune, ‘now that we are in this house, we are in a different position, and the little girls must be suited to it. I’ve heard them talking just like the St Kerian children—with a Cornish twang, and I won’t have it. They must have better schooling than they can get at the national school.’

‘Will you send them away?’ asked Mrs Cable in dismay, as her heart failed her at the thought of parting with her grandchildren.

‘No; they must not leave home; they must learn better here. They should be able to play on the piano, and to sing, and read French, and know something of all those concerns which young ladies are expected to be acquainted with.’

‘What! Are you going to bring a governess into the house to them?’ asked Mrs Cable with dismay almost equal to the first at the prospect of parting with the children.

‘No; I’ll have no stranger here,’ he answered.

‘Then, how are they to learn?’

‘Is there no one in the village who could teach them? I do not mean that they should be ignorant, or know no more than the labourers’ children, because they will have money, and if they marry, they shall marry well.’

‘There is a long time to that,’ said Mrs Cable.

‘Who can teach them?’ asked Richard.

‘There is but one person who can do this,’ she answered, after a pause.

‘She must be well paid for her trouble. You must arrange all that. Only, I will not have this teacher come here; the children must go to her. Pay her what you like, and take her, whoever she may be. I do not ask her name; I want to know nothing about her; but if she teaches them, I will not have her too free with them: she must undertake not to kiss them, and coax them to love her. Do not tell me who she is; I do not want to know. I leave all that to you, but I make my stipulations beforehand.’

‘You mean this, Richard?’

‘I leave it to you. I ask no questions. I want no names named. If the children are to learn the piano, this lady who is to teach them must have one on which they may be taught. I will order one at Launceston to be sent to the cottage.’

'Very well, Richard.'

'I have hit on a great idea,' said he with a sudden change of tone. 'There is always a trouble about feeding the calves with the hand. I have ordered at Bridgewater a lot of stone bottles, like those for ginger-beer, but as large as foot-warmers for bed. And I've had a board put along each side of the calves' van, with holes in it, into which the bottles can be fitted. And then, mother, I've had tubes and nipples made for the bottles; and I pass these in to the calves through the bars, and they can all suck comfortably as they ride along. I might take a patent for it, I fancy, if I chose.'

'But, Richard, to go back to the subject'—

He interrupted her hastily. 'I'm going to engage a boy; and when we come to a hill, he'll walk round the van, and if any of the calves, which are as weak in their intellects as babies, let the nipples out of their mouths, which they may do through the joggling of the van when the roads are fresh stoned, or they may do it out of sheer stupidity—then, I say, the boy will put them back in their mouths again, and fill up the bottles with skim-milk at our halting-places. I've always found the calves get very much pulled down by a journey, and now, with this contrivance, I reckon they will be very much pulled up.'

'But about the girls?'

'I'm going to work on a grander scale altogether, and have a set of vans. I'm quite sure I can carry on the business wholesale, and with this idea of the calves' sucking-bottles carried out into execution, I must succeed.'

There was no getting anything more out of him relative to the education of the children. He was apparently now engrossed in the perfecting of his arrangements for feeding the calves out of bottles.

'It is wearing and exhausting to the hand,' he said. 'It gets like that of a washerwoman who uses soda—all cockled and soft, what with being in the milk and in the calves' mouths. I've tried the butt-end of the driving-whip, but it don't draw up milk, and the calves don't like the taste of the brass mouth; so I've had to come back to the hand again. It is possible they may object to the vulcanised india-rubber at first, whilst it is fresh.' Then, abruptly he reverted to what he had spoken of before. 'Don't let her think that there's any favour shown in letting her have the cottage. It is done to suit my convenience. Last night, as I sat in my summer-house, I could see down into the village; and, I suppose, to annoy me, she had her lamp burning till late, and there is not a wall or a tree between the post-office and my garden, so that the light of her lamp shone right up in at my door, and sit how I would, I could not get away from it. It aggravated me, and I know I shall get no pleasure out of my summer-house like that. By day, she'll do something to annoy me if she has that window, perhaps put red geraniums in it.'

'But Richard—it is a mile away.'

'I don't know what the distance is; it aggravates and provokes me past endurance. I shan't be able to sit there of a day, because of the pelargoniums; nor at night, because of her lamp. I shall have to move the summer-house, and the

expense and trouble of that—the having masons and carpenters and painters about the place again, will be so vexing, that I'd rather she went into our old cottage. It would be best for me, and she'd save money herself, for I don't mind the rent, as it is an accommodation to me. I couldn't move the summer-house under ten pounds.'

'And with regard to the matter of the children'—

'There is no favour there either,' interrupted Richard; 'and I beg you will let her understand that. I want them instructed, and there is no one here but the young ladies at the parsonage and herself fit to teach them; and you can ask the former to undertake the task; if they refuse, then you can offer it to the other one; she gets the job only because there is no one else available. Let her understand that. And mind, tell her, if I send a piano there—I mean, to the cottage—it is not that I give it her or lend it her; it is for my daughters to practise on; but I don't object to her playing on it at any other time, because I've always heard that a piano ought to be played on continually to keep it in tune. It would go badly out of tune if it were only used for the children's schooling, and that would spoil their ear.—Also,' continued Cable, 'there are some sticks of furniture, and some bedding and other stuff, and some crockery down there, which must be used to keep the damp out of them and the moth and the wood-worm. There's no room up here for all these things, and they don't suit this new house; they are left down there to accommodate me; and if she does not pay rent, it is because we find it convenient to put some one in to keep the cottage dry, the mildew out of the furniture, and the moths from the bedding, and to keep the crockery from being chipped. Make her understand that; and if she spoils things, she'll have to pay damages. I do not know that I shan't put some more things into the cottage just to run the chance of their being injured by her, and so deduct the cost of the things spoiled from her wages.' Then, without looking at his mother to see what she thought of his ideas, whether relating to the feeding-bottles for his calves or the education of his children, he went down into the valley to his old cob cottage.

He had put the key in a secret place—a hole in the thatch, that none but he knew of. He opened the door and went in and locked himself in. The cottage was in the same condition in which it had been left. The stools were round the poor little table, the armchair by the fire, and the ashes of the peat white on the hearth. Then he took off his coat, and went into the back kitchen and fetched a broom and a pail and a pan, and set to work to clean the house. He did not return to Red Windows all day. He was busy at the cottage. He scrubbed the floors and the little stairs; he brushed down the walls; then he got whitening at the grocer's and whitewashed ceiling and walls. He cleaned up the hearth and laid fresh kindling-wood on it, and hung a kettle to the crook over it. He paid repeated visits to the shop that day, and bought glazed calico and tacks and chintz and muslin; and he nailed up curtains to the windows and put blinds where there were none—'lest,' as he said to himself, 'the lamp should shine out

of those windows and torment me.' Afterwards, he got a spade and dug up and tidied the garden. He did not desist from his self-imposed task till late at night, not till everything was done to his satisfaction. He was a man who loved tidiness. Next morning early, he left St Kerian. This time he went to Bewdley, where he had to bestow some cattle he had contracted to bring to the farmer on the home-farm of the manor.

When he came to the inn, he found Mr Polkinghorn there, who sprang up and saluted him with urbanity. 'How are we?' asked the footman; 'bobbish or not? And how is the missus?'

'I am well,' answered Cable gravely. He passed over the second query.

'You haven't come in your travels yet on the manor of Polkinghorn, have you?' inquired the flunky. 'Because, if we could hit on that, there'd be some chance of our recovering the title-deeds, and being reinstated in our manorial rights. But—you see—till we know where it is, the Polkinghorns can take no step.'

'How go matters with you?' asked Cable.

'Well, queerish,' answered the footman. 'You've heard the news, of course?'

'News? I've heard nothing.'

'Not of our appointment to a bishopric?'

'You. No, certainly.'

'Yes, we are.'

'What? The old lady?'

'Not exactly; but her brother-in-law, old Sellwood. I know him well; he's a nice old shaver. He's going to be a bishop down your way, at Bodmin. That is in Cornwall, is it not?'

'Yes.—He to be bishop! I do not look at the papers.'

'Yes; he'll be bishop. I don't know that we care much about it. You see, the families of Sellwood and Otterbourne don't need it. They've lots of money, and a twopenny-ha'penny bishopric ain't much to them; especially a new affair, such as this. Why, I don't believe there's even a cathedral there, not a dean and chapter; and—I wouldn't take a bishopric myself where there wasn't a dean and chapter to sit upon. If you don't sit upon somebody, you're nobody. It isn't a man's headpiece that gives him estimation; it is his capacity elsewhere for sitting upon people.—What is it that makes Mr Vickary so much respected in our place? It is, that he sits upon us all. If he only sat on the button-boy, would he be held in such high honour? I put it to you, as a man of the world.'

Cable made no reply.

'I think if I may volunteer a suggestion,' said Polkinghorn, 'that I could give you one to improve your business.'

'Indeed?'

'I suppose you've curates down your way?'

'O yes, there are some.'

'When the bishop comes into quarters, there will be a demand for more—for lots.'

'You think so?'

'I'm sure of it,' said the flunky. 'Now, add to your van of calves another of curates, and dispose of them down in Cornwall.—You'll excuse me; I am accounted a joker.' Then looking round, and seeing that Mrs Stokes was not in the room, he said in a low tone: 'There

is worse behind. We're about to have a regular revolution.'

'Of what sort?'

'You'd never guess; and you're somehow mixed up in it.'

'How is that?'

'About that affair of—your wife.'

'What about her?'—sharply.

'It seems she has a stylish sort of a father, called Cornellis.'

'Yes; what then?'

'He came here after you took her away. He didn't appear whilst she was in our place. He's a gentleman, you know, and I suppose disapproved of her being in a situation; though, for the matter of that, I'm a Polkinghorn, and I'm in a situation. What a Polkinghorn can do, a Cable may.'

'Never mind about that; go on.'

'Some folks have vulgar objections to situations. If they do object to them, they're not gentlemen; as I take it, it is low.'

'What has Mr Cornellis done?'

'Done! You should ask, what is he going to do?'

'Then I do ask that. He has not been to see his daughter where she is now.'

'Oh, I don't fancy he's particularly interested about her. I fancy she was made the excuse for his first coming here, and making our old girl's acquaintance. He's been here off and on a good deal since—a great deal too much for the liking of some of us; and if Miss Otterbourne had taken our opinion, she'd have sent him about his business long ago.—I beg pardon, if I offend. He is your father-in-law.'

'You do not offend at all.'

'It was a bit of a come-down his girl marrying you, no doubt, and he cut her off and disowned her for it; but he seemed mighty interested about her after she was gone.'

'He had not sufficient interest to pursue her, and so that she was well and comfortable and in good hands.'

'In good hands! She was in yours, I suppose, comfortable! It seems to me you're not badly off. Besides, as you married her, she was your charge, not his.'

'What further has Mr Cornellis done?'

'He has made himself a great favourite with the old lady; he humours her, and— But here comes Mrs Stokes, and I don't like to talk state secrets before her. I'll tell you later.—We were speaking of the bishop. Do you know Sellwood?'

'I have spoken to our rector at Hanford.'

'I can't say I'm intimate with him,' said Mr Polkinghorn. 'There are some people one can't be intimate with; though one may put out as many feelers as an octopus, there is no laying hold of them. I've taken his shaving-water to him, too.'

This did not seem to interest Cable; he was anxious to hear the rest about Josephine's father. Presently, Mrs Stokes left the room, and then Mr Polkinghorn resumed the subject.

'He's an insinuating man is your father-in-law; and when he found that the old woman was keen on the lost Tribes, bless you, he led her such a tally-ho! after them, it was just like as you play with a kitten, drawing a ball, or a

cork along the floor, and whisk and away went the old creature purring and frisking and snapping and clawing. It was quite pretty to see her. And I do believe that he persuaded her that he was the concentration of the Ten Tribes in himself, a sort of a mixed pickle-bottle of capsicum and gherkin, and cauliflower and onion—only put Benjamin and Menasses, and Gad and the rest of 'em, for the vegetables, and a general Judaic flavour for the vinegar.'

'Go on. What next?'

'I should like to know what are the circumstances of your father-in-law? Is he a man of substance or a soap-bubble—which?'

'I cannot say; I suspect the latter.'

'So do I; and I fancy he will take care to make himself a comfortable nest somewhere. There was a goose and a gander on intimate terms, that I knew, and the latter set to ripping the down off the breast of the goose to line a nest. He persuaded her to it, and the fond creature helped to strip her own breast; and the two birds smoothed the down into a very snug sort of nest. Well, will you believe me?—there came a late fall of snow and some very sharp weather, and through it all, the gander sat in the downy nest, and let the goose walk about and shiver in the snow, with her plucked breast quite bare.'

'What do you mean by this?'

'Oh, I'm a wag, and I mean more than I put in plain words. There are parables to be read, and the moral is easy understood by them as has brains. I don't feel sure that your father-in-law has not the nature of that gander, and I'm pretty sure our old woman has that of the goose that helped to pluck herself.'

'Do you mean to say that he is helping himself to her money?'

'I won't say that. But I believe before long he'll persuade her to pay for a marriage license, and then he'll take up his quarters in Bewdley and begin the plucking process. We won't stand it—none of us. We will go.'

'But—she is old enough to be his mother.'

'There is no fool like an old fool.'

(To be concluded next month.)

### FOPS AND FOPPERY.

ALCIBIADES, whose powers of pleasing were such that, according to Plutarch, 'no man was so sullen but he would make him merry, or so churlish but he would make him gentle,' was the earliest dandy of whom history informs us; and Beau Nash and George Brummell have been classed amongst the latest. But foppery is not dead yet, nor will it be until the end of time. We can, however, console ourselves with the fact that the foppery of to-day is of a much milder type than that which prevailed in the days of Lucullus, who, according to Horace, had five thousand rich purple robes in his house.

The earliest English dandies were, it appears, known as 'Fopdoddles.' Butler mentions them in his *Hudibras*. 'You have been roaming,' he says,

'Where sturdy butchers broke your noddle,  
And handled you like a fopdoddle.'

Coming to the time of the English Revolution, we find that the designation by which fops were known had changed several times. 'It was a favourite amusement of dissolute young gentlemen,' says Macaulay, 'to swagger by night about the town, breaking windows, upsetting sedans, beating quiet men, and offering rude caresses to pretty women. Several dynasties of these tyrants had, since the Restoration, domineered over the streets. The Muns and Tityre Tus had given place to the Hectors, and the Hectors had been recently succeeded by the Scourers. At a later period arose the Nickers, the Haucubites, and the yet more dreaded name of Mohawks.'

A little later on the Fop appeared. Swift thus characteristically refers to the partiality of women for the society of fops:

In a dull stream which, moving slow,  
You hardly see the current flow,  
When a small breeze obstructs the course,  
It whirls about for want of force,  
And in its narrow circle gathers  
Nothing but chaff, and straw, and feathers.  
The current of a female mind  
Stops thus and turns with every wind,  
Thus whirling round, together draws  
Fools, fops, and rakes, for chaff and straws.

In the time of Dr Johnson, the Sparks were in great force; while the Beau also flourished in the last century. He seems to have been something like Lord Foppington in Sheridan's *A Trip to Scarborough*—very choice in the matter of oaths, especially dainty in shoe-buckles—which were as large as the shoe could possibly support—ablaze with jewelry, and extremely fond of powder and patches; altogether, one of the most ridiculous caricatures of a man one can easily conceive.

Next we come to the Macaronies, who were so called because they introduced Italian macaroni at Almack's subscription table. Addison gives the following derivation. 'There is,' he says, 'a set of merry dolls whom the common people of all countries admire, and seem to love so well that they could eat them, according to the old proverb; I mean those circumforaneous wits whom every nation calls by the name of that dish of meat which it loves best. In Holland, they are termed "Pickled Herrings;" in France, "Jean Potages;" in Italy, "Macaronies;" and in Great Britain, "Jack Puddings."' The transference of the word from fools and clowns to men of fantastic refinement and exaggerated elegance is, as has been well observed, a singular circumstance, of which philologists have not as yet given a satisfactory explanation. It will be remembered that Sir Benjamin Backbite in *The School for Scandal* applies the word 'Macaroni' to horses of a good breed:

Sure never were seen two such beautiful ponies;  
All others are clowns, but these Macaronies:  
And to give them this merit, I'm sure is not wrong,  
Their manes are so smooth, and their tails are so long.

The human Macaronies were, it seems, the most exquisite fops that ever disgraced the name of man, yet we are indebted to them for the introduction of the well-known dish so named.

Dandyism brings to mind the Dandies, who were probably in their prime in the 'palmy days' of the Regency. 'I like the dandies,' says Lord

Byron—'they were always very civil to me; though in general they disliked literary people, and persecuted and mystified Madame de Staël, Lewis, Horace Twiss, and the like. The truth is that, though I gave up the business early, I had a tinge of dandyism in my minority, and probably retained enough of it to conciliate the great ones at four-and-twenty.' The Dandies, however, received a severe handling from Carlyle some years later. 'Touching dandies,' says he, in *Sartor Resartus*, 'let us consider, with some scientific strictness, what a dandy specially is. A dandy is a clothes-wearing man—a man whose trade, office, and existence consist in the wearing of clothes. Every faculty of his soul, spirit, purse, and person is heroically consecrated to this one object—the wearing of clothes wisely and well; so that as others dress to live, he lives to dress. The all-importance of clothes has sprung up in the intellect of the dandy without effort, like an instinct of genius: he is inspired with cloth, a poet of cloth. A divine idea of cloth is born with him.'

After the Dandies came the Exquisites and the Loungers, who did everything in a style of their own, and whose motto was, 'Look and die.' These fools fancied themselves great lady-killers. The Exquisites and the Loungers were succeeded by the Corinthians, who were fops of a more adventurous and rough-and-ready kind. The word is derived from Corinth, whose immorality was proverbial both in Greece and Rome. A Corinthian, according to Dr Brewer, was the 'fast man' of Shakespeare's period also, hence the reference in *Henry IV.*: 'I am no proud Jack, like Falstaff; but a Corinthian, a lad of mettle, a good boy.' 'Snobs' was the designation by which the fops of the next generation were known. Thackeray, who has made us familiar with the word, gives the etymology of it as *pseudo-nobs*—that is, false or Brummagem nobles.

Two or three years ago, the *Daily News*, in a notice of *Punch's Almanac*, observed: 'Those who are curious in the matter of "neology" should note that in this number the word "masher" has finally usurped the place of "swell," just as "swell" superseded "dandy," which itself was the successor of buck, blood, Corinthian, exquisite, macaroni, beau, and numerous other kindred designations.' Partly in consequence of this and similar paragraphs in other periodicals, the origin of the word 'masher'—the term by which another generation of fops were known—was attributed to our old friend *Punch*. But Dr Charles Mackay says the word, which came to us from the United States, is of Gaelic origin, and was introduced into the country by the Irish immigration. It is derived from the Gaelic *maise*—pronounced 'masher'—and signifies fine, elegant, handsome, and was originally applied in derision to a dandy. This derivation cannot, however, be regarded as final, as the French *marcheur*, and other words, have been claimed as the origin of masher.

'Dude' and 'Chappie' seem to be the latest synonyms for fop, but the words do not appear likely to come into general use.

The foppery of great men has always been a source of amusement—sometimes of disgust—to their contemporaries. The curled and scented ringlets of Disraeli were laughed at by his political friends; and it is very probable that Julius

Cæsar was also laughed at because he set the fashion of wearing earrings, which before that had been confined to women and slaves. Disraeli's letters, however, prove that he could laugh at his own foibles in dress. Like Byron, the great Duke of Marlborough was a dandy when young, but he lived to see the folly of his ways.

Whether the present generation is wiser than its ancestors is perhaps open to question; but there can be no doubt that foppery as an institution is dying out, although mild specimens of the genus may probably exist until the end of time.

## THE OLD WAY AND THE NEW.

### CHAPTER IV.

LADY PENGELLY'S interview with Matthew Roding was not yet over, when a little, prim-looking, elderly man walked slowly up the road of which Chesterfield Villa formed such a pretentious feature, scanning the name of each house he came to, and evidently at a loss where to look for the particular one he was in search of. He had the timid and furtive air of a man who wishes to escape observation. In one hand he carried with evident care a small package, wrapped round with thin white paper. His face brightened somewhat when he came to Chesterfield Villa and read the name painted on the gatepost. The villa had two entrances in front—one for visitors, the other for tradespeople and servants. It was to this latter entrance that the stranger made his way, and, after a last glance round, ventured to give a timid tug at the bell-pull. His summons was answered by a supercilious youth in buttons, who, after eyeing the little man from head to foot, condescended to say: 'Well, and what may your business be?'

'This is Mr Abel Roding's house, is it not?'

'No; it ain't. This is Mr Matthew Roding's house.'

'But Mr Abel Roding lives here?'

'He do.'

'Will you please tell him that Peter Bunker would like to see him for a few minutes on particular business?'

'Peter who?' queried the youth loftily.

After the name had been repeated, he turned on his heel and went off at a leisurely pace, leaving the old clerk standing outside. Not long had he to wait, however. Presently, Abel came hurrying along the passage, and seizing him by the hand and shaking it heartily, drew him in-doors. 'Why, Peter, old friend, what has brought you this morning?—But not a word here, he added in a lower tone. 'Follow me to my room.'

When they had reached Abel's room and the door was shut, Peter said: 'You must excuse the liberty I have taken, sir, in coming here this morning; but I couldn't rest till I had seen you. But first of all, sir, allow me respectfully, but with all sincerity, to wish you many—very many—happy returns of the day. I had not forgotten it, sir—not by any means. And here are a few flowers, sir, simple things, gathered fresh this morning out of my little garden at Peckham, of which I will venture to ask your

acceptance.' Speaking thus, Peter stripped off the paper and displayed his modest offering.

Grandad took the flowers and buried his nose among them. 'Thanks, old friend, many thanks both for the good wishes and the posy,' he said. 'I know both of them are from the heart, and that is everything. The scent of these gillivvers carries me back sixty years. We had great bushes of them at home in the south croft. To smell them again brings back, sharp and clear, scenes and pictures I had all but forgotten.' There was a far-away look in his eyes as he spoke; then, having smelled at the flowers again, he crossed to the chimney-piece and placed them in a vase there, which he filled with water from a jug on the sideboard.—'And now, Peter, you have something more to tell me,' he said as he went back and resumed his seat. 'You look troubled this morning.'

'I am troubled, sir, deeply troubled. Mr Matthew—not that I wish to say a word against him—has given me notice that he is going to pension me off. He says that I am slow and out of date and too old for my work. He wants a younger man—a man with more dash and "go" in him, he says. Slow I may be, Mr Roding; but I'm sure, sir, very sure. I've been over forty years with the firm, and I hoped to die in harness. It would break my heart to be turned adrift.' The little man's speech ended in a quaver that was not far removed from tears.

Grandad's brow had darkened ominously at Peter's recital. 'Too old, eh, Bunker?' he said. 'That's all stuff and nonsense. Why, you're not sixty yet. Just in your prime—just in your prime!'

'A hint has reached me, Mr Roding,' resumed Peter, 'which I think it only right you should be made acquainted with. It came to me through Twamley, our junior clerk, who is a particular friend of Grigson, Mr Matthew's clerk at his Throgmorton Street office. What Grigson gave Twamley to understand was, that Mr Matthew wants the business—*our* business, sir—specially worked up for a couple of years or so, with the view of finding a customer for it at the end of that time, his new business being so much more profitable and requiring all his time and attention.'

'Oho! so that's the game, is it?' exclaimed Grandad. 'I had an idea there was something of that sort in the wind. What is it Shylock says in the play?—"Tis not in the bond." No; certainly that little item is not in the bond.' He rose and began to pace the room slowly, his hands behind his back, and his chin nearly touching his breast. After a time he came to a halt behind Mr Bunker's chair, and gripping the little man hard by the shoulder, he said: 'Make your mind easy, old friend; whatever else may happen, you shall not be turned adrift. That I promise you.'

Peter started to his feet and faced Grandad's tall, gaunt figure. 'O Mr Roding, sir!' he gasped. Not another word could he utter at the moment, so full was his heart.

'Now that I've got you here,' went on Abel presently, 'I don't mean to let you go in a hurry. You must stay and dine with me; and we'll crack a bottle of wine together and have a palaver

about old times. One doesn't have a birthday every week.'

Mr Bunker looked frightened. 'O Mr Roding, sir, thank you—thank you very much indeed! But what would Mr Matthew say at my taking French-leave in that way? He would be sure to hear of it. And then there's yesterday's work to post up in the ledger, and'—

'Tut, tut! let the ledger go unposted for once; and as for Matthew—never fear. The cook and I are famous friends, and she's promised me a splendid plum-pudding in honour of the occasion. There will only be us two, Bunker—only us two. You wouldn't leave me to dine alone on my birthday, would you?' There was a ring of sadness in the old man's voice as he put this question.

'I shall feel most honoured, I am sure,' sir, if you think it will be all right at the office.'

But Grandad did not seem to hear him. 'I was hoping Ruff would have come to-day,' he muttered, half to himself. 'But the boy's forbidden the house, and I suppose his pride won't let him come near it. Still, I wish— Well, well!'

Bunker's ears had caught the name. He had met the young painter two or three times at Islington, and had conceived a great admiration for him. 'And how is Mr Ruff, sir, if I may make bold to ask?' he said. 'Quite well, I trust; and no doubt as full of fun as ever. He always used to keep us alive; didn't he, sir? But what a pity—what a great pity he did not enter the counting-house! I would have put him through double-entry and everything. I would have'—

'Bunker, you're an ass!' said Abel, turning quickly on him. 'Any idiot is good enough for a counting-house; but just you try to paint a tree, or a wall with a bit of ivy trailing over it, or my withered old phiz, and then see where you'd be! It's only genius can do that, sir—genius! I wish with all my heart the boy had been coming to-day.'

For a little while Mr Bunker ventured on no further remark. Presently, as if to make amends for his curtness, Grandad crossed to the sideboard, and opening it, produced therefrom a bottle of wine and a couple of glasses. 'I know you like a drop of good old port, Bunker, and so do I—so do I. It's a sensible taste. I think you'll find this as prime as anything they've got at Bilbo's. It will warm the cockles of your heart, old friend!'

Before putting the wine to his lips, the little man did not fail for the second time to wish his former employer many happy returns of the day. Abel made him empty the glass, and the generous fluid helped to loosen his tongue. 'This is very like your old room at Islington, sir,' he said presently, as his eyes wandered from one article of furniture to another. 'Puts me quite in mind of it, only of course the windows have a different lookout.'

'Yes; it was my daughter-in-law's idea to make it as like the old spot as possible,' answered Abel dryly. 'Very kind and thoughtful of her, was it not?'

'But you don't mean to say, sir, that you live in this room! I thought'— Then he stopped in some confusion.

'You thought my home was in those fine rooms

on the other side of that green baize door, with their big mirrors, and their gilding, and their velvet couches and gimcracks? No, no; my daughter-in-law understands my simple tastes better than you, Bunker. This is my sitting-room, and there beyond is my bedroom, and I have them all to myself! Think of that! Oughtn't I to be a happy man?' There was a bitterness in his tone which struck dismay to the old clerk's heart.

'And all the grand furniture and everything in the house bought with your money, sir!' he could not help saying; but Grandad did not seem to hear the remark.

There was a long-stemmed, cherry-wood pipe resting against the corner of the chimney-piece; pointing to it, Peter said: 'I am glad to see, sir, that you still enjoy your tobacco.'

A faint flush mounted to Grandad's wrinkled cheek. 'And you, yours, I'll be bound, Bunker. I remember that you always were fond of your 'baccy. If I had known you were coming, I would have ordered in some of your favourite cut Cavendish. There's a nice summer-house in the garden, and we'll have a pipe together presently.'

'All among the earwigs and caterpillars, eh, sir? But you don't always smoke in the summer-house, do you, sir?' It was an innocent question, and asked more for the sake of saying something than for any other reason.

Grandad coughed and fidgeted a little before answering. 'Well, you see, Bunker, this is how it is. My daughter-in-law doesn't like smoking—thinks it's vulgar, and all that, which of course is nonsense. Then, if I smoke indoors, even with the green baize doors shut, she says she can smell it all over the house. You see, she's got a very sensitive nose, which may be a blessing or may not, as people think. So, for the sake of peace and quietness, Bunker—only for peace and quietness, mind you—I now do all my smoking out of doors.'

'O Mr Roding, sir, that I should live to see the day when you would be frightened at a woman—you who used to be your own master and everybody else's!' The wine had evidently imparted to the little man a degree of courage which he ordinarily lacked.

Grandad stared at him for a moment, then he said, but not roughly: 'Bunker, either you are an old fool or I am. Which is it?—But let us get out into the garden.'

Five minutes later, Bunker being a little distance away, trying to fathom the mysteries of a sundial, Grandad felt a light touch on his sleeve, and on turning, found himself confronted by Mary Nunnely's smiling face.

'Just a word,' she said hurriedly in a voice that was scarcely raised above a whisper. 'When I was down the road half an hour ago I met Ruff—quite by accident of course. He is coming to dine with you to-day because it's your birthday; but he doesn't want to create any unpleasantness with Mrs Roding. He will be outside the gate that opens into the lane at twelve o'clock, and he wants you to let him in when the coast is clear. It's terribly audacious of him, I know. Mr Roding has been gone about twenty minutes, and Mrs Roding has ordered the carriage to go shopping in. She will be away a couple of hours

at the least, and, for a wonder, she is going to take Freddy with her. But I dare not say another moment now.'

Grandad had not been able to put in a word, and all he could now do was to stand and stare after the girl's retreating figure till it was lost to view. Then he turned, and as he did so, he muttered half aloud: 'So the boy's coming. He has not forgotten the old man, after all. Somehow, the sunshine seems to have grown brighter, and the air does not feel so chilly as it did a while ago. Well, well!—Now, I do hope that plum-pudding will beat every plum-pudding that was ever concocted before.'

At five minutes past twelve, the garden gate was opened by Grandad with the key he always carried, for that was his usual mode of egress and ingress, and Master Ruff was smuggled into the forbidden territory. Over the greetings between the old man and the young one we need not linger. That they were affectionate and sincere on both sides may be taken for granted. Bunker and Ruff met as old acquaintances. Scarcely were the greetings over, when a servant brought in a small hamper containing the game-pie, together with certain other articles which had just arrived. Ruff made-believe to know nothing whatever about the hamper and its contents; but Grandad was not to be so easily imposed upon. In a little while Ruff began to grow fidgety and to look as if something were wanting to complete his contentment. Grandad, who was keen-sighted enough on occasion, divined at once what was amiss, and presently left the room without a word to either of the others.

No sooner had he gone than Ruff brought forth his painting of the water-mill, which till now had been sheeted in brown paper. He had not forgotten to bring some cord and a brass-headed nail; and in three minutes the picture had found a place on the wall, there to greet Grandad as a pleasant surprise on his return.

When the victoria had driven off Londonwards, with Mrs Roding and Freddy sitting in state therein, Mary went at once to the little morning-room in which she and the child spent the greater part of each day. She took up her sewing, feeling that she must occupy herself in some way; but swiftly as her needle moved, her thoughts flew to and fro a thousand times more swiftly. Her heart was in a flutter; in her cheeks the wild-rose tints came and went fitfully. Ruff had sold his picture, and had got a commission for another; that was indeed, as he had said, great news—glorious news! And then he had told her that he meant to make her his wife in six months from now. What news could sound sweeter than that in the ears of a girl who loved as she loved? And yet within the rose there lurked the inevitable canker-worm. What happiness it would be to be Ruff's wife, if only his father were reconciled to him and would consent to their marriage! But there was the rub. In time, the breach between Mr Roding and his son would doubtless be made up, especially now that Ruff was on the high-road to fame and fortune—for so, in happy ignorance of the thousand-and-one obstacles still to be surmounted, she believed him to be—but would such reconciliation ever come to pass should Ruff madly, foolishly affront his father's pride and ruin his own prospects

in life by marrying her, a penniless dependent on his mother's bounty? Mr Roding was not the kind of man to forgive such a *mésalliance*, as he would undoubtedly deem it to be. Wealth seemed to be flowing in upon him, bringing with it, as she divined already, ambitious dreams of many kinds, in some of which his son doubtless played a conspicuous part. For her to wed Ruff would be to drag him down from the golden future which shone so close before him; and then, perhaps, in years to come—who could tell?—he might tire of her, and regret the sacrifice he had made. No, never—never could she become his wife!

At this thought, two burning tears welled slowly from under her eyelashes. She stopped her needle for a moment, and as she raised her hand to brush them away, she saw Grandad standing in the doorway, regarding her with curious questioning eyes. The soft pile of the carpet had deadened the sound of his footsteps. With a little cry, Mary dropped her work and sprang to her feet as the old man came quickly forward. Then he drew her to him and kissed her softly on the brow. 'Come, come,' he said cheerily; 'of all days in the year, tears will never do to-day. The scapegrace has arrived; but he's got such a dreadful fit of the fidgets coming on, that I want you to come and try whether you can't soothe him back into gentleness. Why, the boy has sold his picture—as I knew all along he would—and he's been asked to paint another; and I hear, as plainly as ever I heard anything, the sound of wedding-bells in the distance, and—Why, what's this? The young baggage is actually crying, when she ought to be as bright and full of happiness as a morning in May!'

Still holding her round the waist, and stroking her hair fondly with one hand, he let her overcharged heart relieve itself silently for a few moments; then he said: 'What is it that troubles you, my pretty? Tell me—tell Grandad. Sometimes we old folk are like wizards, and can weave spells and bring things to pass by the power of our magic in a way you youngsters never dream of. Tell me what troubles you.'

'O Mr Roding, Ruff and I can never, never get married,' quavered Mary as she drew herself away and wiped the tears from her eyes.

'O ho! that's news indeed. And why not, pray?—why not?'

'Because Ruff is going to be rich and famous now, and his father would never forgive him, or be reconciled to him, if he were to marry a dependent, penniless girl like me.'

'Is that all that troubles you?' asked Grandad with a sort of contemptuous snort.

Mary did not answer, but her silence seemed to ask reproachfully: 'Is it not trouble enough for a girl who loves as I love?'

'Now, listen to me,' went on Grandad impressively; 'and then dry your eyes and try to put on your prettiest smiles. Before the year we are now in is dead and buried, Ruff Roding and his father will be reconciled; and, what's more, the latter will have given his consent to your marriage with his son. That which I promise I can perform, for I am one of those wizards I told you of just now.'

When Mr Grigson got back to the villa after

despatching the telegram which had so greatly puzzled him, he found the breakfast-room empty. Matthew Roding was still closeted with Lady Pengelly. Having the room to himself, Mr Grigson took up and glanced rapidly over such letters as his employer had already opened. There seemed nothing in them, however, that interested him. He was still ferreting among the papers, when he gave a great start and glanced quickly round. There before him lay a polished steel key of peculiar workmanship. Matthew Roding had laid it beside his breakfast tray when he came down, and had forgotten to put it into his pocket when summoned to meet Lady Pengelly.

'The key of the private safe, by Jove!' exclaimed Grigson in a whisper. 'Never knew the governor to let it out of his possession before. I've been waiting for this chance for four long months, and now it's come.—What a slice of luck!'

After another glance round and a moment of anxious listening, he produced from an inner pocket a flat tin box not quite so large as the palm of his hand. When the lid of this was removed, a cake of prepared wax was disclosed, on the yielding surface of which, a quarter of a minute later, his dexterous fingers had impressed a facsimile of the key, with all its intricate network of wards minutely and sharply defined. After this, it was the work of a moment to replace the lid and put back the box in its hiding-place. Then with his handkerchief he carefully wiped the key and put it back among the papers where he had found it. 'This may prove useful some day, or it may not,' he muttered. 'In any case, I now command the situation. You fly your kite very high, my dear Mr Roding, very high indeed. I admire your audacity, but sometimes tremble for the result. It is quite in the chapter of accidents that one day the string may break and your kite come down with a run. Ergo, the man who is wise prepares himself betimes for eventualities.'

When Matthew Roding went back after conducting Lady Pengelly to her carriage, he found his confidential clerk quietly gnawing one end of his moustache and, to all appearance, deeply immersed in the *Times*.

(To be concluded next month.)

#### THE ITINERANT OLD-BOOKSELLER.

THE itinerant vendor of old books going about with his humble stock-in-trade from town to village and from village to town, is a character whom one now seldom encounters. The fairs and markets at which he used invariably to appear being themselves to a great extent now obsolete, the individuals of the species who remain to the present day have ceased to move in regular orbits. But they do still make their appearance at odd times, after long intervals, their stock being usually laid out and disposed of after nightfall by the light of a flaring paraffin lamp. And what a stock! Were any intelligent person to linger over it a few moments, out of curiosity, he would wonder how any human being would travel about with such a heap of trash. But doubtless a livelihood can be eked

out in this as well as other lowly pursuits ; and certainly a sale carried on in the open air under like conditions would not produce remunerative prices for books of a superior description. At anyrate, the trade in these is in the hands of a very different class of people, out of whose fullness it was that this motley collection was formed ; for when the itinerant old-bookman desires to make up a stock, he calls upon the respectable members of the trade, and inquires in quite undisguised language whether they have any rubbish to sell him. They do usually have plenty ; but if it is not yet separated from the valuable stock, preparatory to being sold for waste paper, then it is not worth while for the shop or stall keeper to leave his customers and business to attend to the wishes of his humble compeer. But occasionally the latter does bag a heap of odd and tattered volumes for less than the lot would have realised if the seller had stuck to his first intentions regarding it, because in this case fellow-feeling steps in and modifies the bargain.

The kind and quality of the stock-in-trade gathered together in this way may be judged of. The items which it comprises must after all, sooner or later, come into the hands of the waste-paper merchant, and the intervening transaction, instead of changing their destiny, only postpones it. By the light of the blazing, sputtering lamp they are now once more to be dispersed ; and as it would be difficult to dispose of the various volumes on their own merits, fascinating and wholly fictitious ideas of their contents are communicated to the bystanders. The man into whose temporary possession they have passed is usually a coarse-featured individual, sometimes with but one eye, sometimes squint-eyed, sometimes afflicted with a defective articulation ; but almost always he wears on his face a look of roguish cunning, suggestive of a fund of Hibernian humour which very soon shows itself in the reckless descriptions about to be given of his literary wares. Taking up a moderate-sized book, which might be, so far as his very mixed audience can judge, either a volume of travels, a treatise on trigonometry, or a last-century novel, he begins as follows : 'Now, gentlemen, here is a book you can all read. Here is a volume that will keep you laughing while you are reading it. How much for this book, full of valuable knowledge and amusing entertainment ? I won't ask ten shillings for this volume, nine shillings, six, five, half-a-crown—here, I'll take a shilling for this lot—one shilling, a sixpence, threepence—here, I'll take twopence for it.'

At this too early stage in the downward scale of price, the book is bought by a ploughman, and turns out to be a catalogue of the books in some library or another. Ashamed of having been done, the purchaser slinks away out of the crowd amidst the jeers of those nearest him ; while with complacent leer and an audible chuckle, the seller pockets the price and reaches down for another lot.

The next volume happens to be, say, an old *Parliament House Book*, an annual statistical work of use only to the legal profession in Scotland, in

relation to whom it stands in much the same position as *Oliver and Boyd's Edinburgh Almanac* does to the Scottish community at large. This volume, which was never of use or even intelligible to any human being except a lawyer, is disposed of thus : 'Now, gentlemen, I have to bring before you a really superior lot of goods. If any gentleman wants a bargain, now is the time. The *Parliament House Book*, containing the lives of eminent statesmen. Who bids for this superior work ? I don't ask twelve shillings and sixpence for this really valuable book, ten shillings, five shillings—here, I'll take one shilling for this work. One shilling. Are you all done ? Here—six, five, four, I'll take threepence for the *Parliament House Book*, containing the lives of eminent statesmen.—Are you all done ? Here—I'll take a penny for it.—Sold again !'

A soldier is the buyer in this instance, and he gets a bargain, though he only uses the leaves for lighting his pipe, for there must be three hundred of them at least.

Grammars, English and Latin, Euclids, arithmetic-books, and all kinds of old educational works, always form a conspicuous feature in the pack, and find purchasers. Odd volumes of some well-known historical work are also readily disposed of, especially if they contain one or two engravings. Let an odd volume of Hume's *History of England*, having a picture of Queen Mary's execution for a frontispiece, be held up, and a dozen people will shout for it as soon as the minimum price has been named. This the seller of old books knows, and he supplies the demand by producing 'Another of the same lot, gentlemen ;' 'Here's another left ;' 'One more, gentlemen ;' 'One more ;' 'One more left, gentlemen'—until the lot is cleared away with breathless rapidity. Sermons are numerous, but are quite neglected. Books of Tales and Adventures are readily sold ; but, as a rule, they are in a sadly defective and tattered condition. Over the drier volumes, a glamour derived from the realm of fiction is thrown to make them go off. One of the fraternity, who was in the habit, till within quite recent years, of visiting a certain northern city, used to wind up his summary of the contents of every volume, no matter what it was, with this sentence, which he rolled in his mouth with peculiar unction : 'And Nero's Golden Palace—a full account of Nero's Golden Palace and all the Roman emperors.'

Probably not the very maddest bibliophile would dream of stopping a little while within the precincts of the paraffin lamp, in the dim hope of securing a prize. In his estimation, the books which the mongrel-looking specimen of humanity is actively dispersing, in exchange for the coppers that shall provide him with supper and a bed, are mere rubbish ; and doubtless, from his point of view, they are so. But biography compels us to admit that haply one or two of these odd volumes may find their way into the hands of some poor creature, young in years as yet, and neglected by all around, but whose soul withal is athirst for knowledge. By such a one they will be welcomed as rays of light coming from that distant world to which his heart aspires with indefinite longing, yea, with painful aching ; and so the sputtering and flickering paraffin lamp suddenly becomes

metamorphosed in our eyes, not all improperly, let us hope, into a real though humble representative of the great, ever-burning, inextinguishable 'Lamp of Learning.'

### RED-INDIAN METHODS OF DEER-CAPTURE.

DEER-HUNTING, as is well known, forms one of the chief employments of the numerous tribes of Indians who roam over the vast territory of North America. It is equally well known that the flesh and skin of these animals constitute the staple articles of Indian food and clothing respectively. Although the wants of the Indians in these two particulars are identical, the means adopted to supply them are not so, but often vary considerably. To secure the valuable prey by shooting, either with gun or bow, is common to all the tribes. In hunting the moose, the Eskimo and the Montagnais depend mainly upon their fleetness of foot and their skill in throwing a sort of elongated harpoon; and when once upon the track of the deer, they rarely fail to encompass its death. The writer knew two young men of the Montagnais tribe who left their wigwam in the morning, travelled a distance of forty miles into the interior, discovered and captured a deer whose carcase weighed nearly two hundred pounds, and returned with their spoil in the space of about twenty hours. An effective but cruel device which is much used, particularly by the Indians who live on the confines of the pale-face territory, and also by the white settlers themselves, is to place a large noose, usually of stout rope, in rabbit-snare fashion, between two trees on each side of the deer-track at the same distance from the ground at which the animal carries its head, which, when proceeding through the forest, is thrown back upon the shoulders.

The Co-Yukon Indians of Alaska kill the moose in large numbers while swimming across the Yukon river during their periodical migrations, 'manœuvring round in their birch-bark canoes till the animal is fatigued, and then stealthily approach and stab it in the heart or loins.' Another and more ingenious mode of capturing deer adopted by these Indians is thus described by Mr Whymper in his *Travels in Alaska*: 'A kind of corral or enclosure, elliptical in form, and open at one end, is made on a deer-trail, generally near the outlet of a wood. The further end of the enclosed space is barricaded; the sides are built of stakes, with slip-nooses or loops between them. Herds of deer are driven in from the woods, and trying to break from the trap, generally run their heads into the nooses, tighten them, and so get caught, or are shot whilst still bewildered and running from side to side. Near the opening, it is common to erect piles of snow with "portholes," through which natives, hidden, shoot at the passing deer.'

We will notice lastly the 'deer-fences' of the once numerous and powerful but now extinct Beothic nation, the aboriginal inhabitants of Newfoundland. They are thus described by Mr Harvey in a recent interesting book on Newfoundland: 'The deer-fences were made by felling the trees along the ridge of the river's bank without chopping the trunks quite asunder, taking care that they fell parallel with the river,

each tree having been guided so as to coincide with and fall upon the last. Gaps were filled up by driving in stakes and interweaving the branches and limbs of other trees. They were raised to the height of six, seven, or ten feet, as the place required, and were not to be forced or leaped by the largest deer.' It is interesting to notice that large portions of these deer-fences still remain in some parts of the interior of Newfoundland, principally, however, in those lying to the north-east and north-west, the usual headquarters of the Beoths. The intrepid Cormack, when travelling in Newfoundland, saw those which lie on the bank of the river Exploits, and in the narrative of his expedition he thus refers to them: 'What arrests the attention most while gliding down the stream is the extent of the Indian fences to entrap the deer. They extend from the lake downwards continuously, on the banks of the river at least thirty miles. There are openings left here and there in them, for the animals to go through and swim across the river; and at these places the Indians were stationed, to kill them in the water with spears, out of their canoes, as at the lake. Here, then, connecting these fences with those on the north-west side of the lake, are at least forty miles of country, easterly and westerly, prepared to intercept all the deer that pass that way in their periodical migrations. It was melancholy to contemplate the gigantic yet feeble efforts of a whole primitive nation, in their anxiety to provide subsistence, forsaken and going to decay. There must have been hundreds of the Red Indians, and that not many years ago, to have kept up these fences and pounds.'

### THE MONTH:

#### SCIENCE AND ARTS.

AN American scientist, Professor Leeds, during an investigation into an outbreak of typhoid fever, is said to have discovered a peculiar property in alum. Upon examining the water-supply in the district in which this epidemic occurred, he found that it was swarming with bacteria, a few drops containing many thousands of living germs. To this water he added a small amount of alum, the proportion being only half a grain per gallon, a quantity which we need hardly say would be tasteless. He found that not only did this minute addition cause a precipitation of all foreign matter, but that the germs were reduced to a few specimens which were all of a large form. By filtration, this alum-treated water was rendered perfectly clear of bacteria. The experiment is one of great importance; and if the results obtained are found, upon repetition, to be certain, a great discovery has been made. Of course, we cannot say that the disease in question was actually caused by the presence of these germs in the water, but it is certain that such germs are always plentiful when disease is common.

The Natural History Museum at South Kensington is, as far as its contents are concerned, rapidly approaching completion. It has just been enriched by two very fine ornithological collections, perhaps the finest which have ever been made—namely, that of the late Marquis of Tweeddale, and that belonging to his nephew Captain Ramsay.

Captain Ramsay's own collection has been made during an extended military career in Eastern lands, and it includes specimens of birds from Afghanistan, the Indian peninsula, the Andaman Islands, Burmah, &c. By these additions, this fine Museum will receive specimens of birds which before were only conspicuous by their absence. In addition to the birds, there is a large library attached to the Marquis of Tweeddale's Collection; and the value of this and the specimens together is estimated at fifteen thousand pounds; but of course their real value to the country from an educational point of view cannot be priced.

The Pneumatic Dynamite Gun, which has been noticed before in our columns, has lately been subjected to some very exhaustive trials at Fort Lafayette, New York. The Secretary of the United States navy had placed at the disposal of the Company which has been formed for dealing with this weapon, an old schooner, which was moored at about two thousand yards from the fort. After two shots of blank shells had been fired, in order to find the range, the gun was loaded with a charged missile containing fifty-five pounds of explosive gelatine. The result of this shot was to give the old vessel a terrible shaking, and, as was discovered by those who boarded her immediately after the explosion, to injure her severely and cause serious leaks. With succeeding shots the vessel was broken up into matchwood. A photograph taken instantaneously, just as one of these explosions occurred, shows the vessel with the hull raised up several feet above its normal position. This picture thus exhibits in a curious manner the peculiar lifting-power of the explosive employed. A writer in one of our service journals maintains that some kind of international agreement will have to be come to 'for the prompt execution of the inventors of new weapons;' otherwise, he urges that the whole naval question will be once more upset, and millions must be spent in a new direction. This reminds us that 'there are many true words spoken in jest.'

The Zoological Gardens, London, have just received an addition to their magnificent collection of an animal which has not yet been seen there. This is a young gorilla, its exact age not being known. When first exhibited, it is said to have shown great shyness before the visitors and refused to eat; but it seems now to have got over its disinclination for food, and eats nearly any kind of fruit which is offered to it, but more especially seems to be fond of pomegranates. It may be remembered by some of our readers that a baby gorilla was some years ago exhibited in London; but it speedily succumbed to the rigours of our climate. It is to be hoped that this new and interesting acquisition at the Zoological Gardens may be more fortunate, although it has come to us at a time of year which is rather risky to an inhabitant of tropical Africa.

The importance which attaches in the present day to the art of photography may be gauged to a certain extent by the fact that a column and a half of the *Times* newspaper has lately been devoted to a description of the Photographic Society's annual Exhibition in London. While there was nothing very novel or of a startling character in this Exhibition, yet the visitor could not

help making one or two observations which seem to point to certain advances in the art. In the first place, the old method of printing photographs in silver seems to be on the wane; and this is not a subject for regret, for it is well known that such prints are subject to discoloration and fading. In the present Exhibition, photographs printed in salts of platinum—which give permanent results—largely predominate. Another thing which is noteworthy is the amount of wall-space taken up in this Exhibition by pictures produced by processes which adapt photographs to book and newspaper illustration.

The manager of the Brighton Aquarium states that the octopus has become so rare on the neighbouring coasts that his collection is now reduced to one specimen of this interesting creature. But, according to Mr A. W. Tuer, both varieties of the octopus or cuttle-fish are plentiful just now outside Falmouth harbour, where, a short time ago, this gentleman caught a large number. In this country, the octopus, possibly on account of its repulsive appearance, is not used for food; although foreign seamen, especially Spaniards, look upon it as a delicacy. Mr Tuer was venturesome enough to try for himself whether the octopus was palatable or not. He says that he had one curried, and found it excellent, and that it was not unlike tender tripe. English fishermen value the creature only as a bait for other fish.

When the present systems of electric illumination were in their infancy, one great difficulty which inventors found in adapting the light to domestic uses was the necessity for finding some instrument by which the amount of current utilised could be measured, in the same manner as gas is registered by the gas meter. Several electric meters have been devised, but they are generally of rather complicated construction. Professor George Forbes has recently contrived one which is both simple in construction and efficient. Its principal part is a spiral wire of the shape of a large watch-spring, the two ends of which are connected with binding screws, so that the apparatus can readily be attached to any source of electric supply. The electric current in traversing this wire causes it to become heated, and has the effect of causing the air-currents in its neighbourhood to be heated as well. By this means, a system of ascending air-currents is established. These ascending currents are made to act upon a small and delicate horizontal windmill, which is in connection with a train of toothed wheels which move the hands on a couple of dials. These hands indicate the number of revolutions of the windmill, which are proportional to the amount of electricity which causes the iron spring to become hot. The meter will be exhibited at the Electrical Exhibition which is now being arranged for by the Electrical Society in New York.

It is not long ago since there was exhibited in London a so-called electrical lady. Upon touching her hand, arm, or face, the visitor received a distinct electric shock, which shock continued so long as his hand was in contact with the lady's skin. According to the showman who exhibited this curiosity, the lady was deaf and dumb, and therefore she was not in a position to hear or answer any questions. Many doctors visited her and signed testimonials as to what they considered

a genuine natural phenomenon. Some light, however, is thrown upon the matter by the confession of a boy who was lately in the same business as the electrical lady, and who is now said to be in New York acting in the more prosaic character of a compositor in a printing-office. This boy has lately explained how it was all done. He says that strips of zinc were laid under the cocoa-nut matting which served as a carpet for the visitors, and also under the carpet upon which he stood. The matting above the zinc was kept constantly wet, a circumstance not likely to be detected by the visitors. By the help of an electric battery and an induction coil, a circuit was completed when any of the visitors touched the boy. The effect of this constant current was too much for the nerves of this youthful prodigy, and after a time he was obliged to retire.

It is not often that the real cause of an explosion in a powder-mill comes to light, for the very good reason that those who could best explain how it occurred have been the first victims. This, however, is not the case with the explosion which took place in September last at the Lowwood Gunpowder Works, Lancashire. Two men on that occasion unfortunately lost their lives. It seems that one of them was in the act of using a sledge-hammer upon an iron key or wedge, and that one of his blows struck a spark which inflamed some explosive dust. The catastrophe may be described as a deflagration rather than an explosion, and no injury would have resulted if the two men had not been cramped up in a small space, from which they could not readily escape. They died within twenty-four hours of the explosion, but not before they were able to give an exact account of what occurred. It seems that a large amount of this explosive dust had accumulated in the upper portion of the building, which had not been periodically washed out, as it should have been. The dust formed in the manufacture of the gunpowder had settled on all places where a settlement was possible, and had formed incrustations which took fire in the way explained.

It is said that four hundred thousand tons of Thomas slag are annually ground into fine powder for use in German agriculture. This slag forms a valuable fertilising agent, from the fact that it contains a large amount of phosphate of lime. The process, of which it is a by-product—that of Messrs Gilchrist and Thomas—consists in the elimination of phosphorus from crude iron before the conversion of that metal into steel. From experiments which have lately been made by Professor Wagner of Darmstadt, it would seem that this fertilising agent is of far more value than those in common use. But its efficacy depends on the degree of fineness to which it is reduced, and the experimenter named urges that it cannot be ground too finely. In this form, it is very easily decomposable, is much more easily taken up by the roots of plants, and is more easily dissolved than if it is supplied to the ground in a coarse condition. The slag contains a certain proportion of iron; but this has no prejudicial influence. In using this fertiliser, it should be ploughed in deeply, in which case its beneficial effect will be felt for a number of years.

From a recent Report by the consul of the United States at Copenhagen, a good deal can be gleaned concerning Danish butter. Complaints

have for some time been made that Danish butter—once considered the finest in the world—has gradually deteriorated, exporters affirming that only about one-fifth of the butter made is as good as it used to be. In the Report referred to, the decline in quality is admitted; and the two main causes of the falling-off in the quality of the butter are given as follows: In the first place, the fodder of the cows is different from what it used to be; the swedes and turnips—which were always before avoided, as giving a pervading taste to butter—are now commonly used, together with bran, cotton-seed cakes, &c. The other cause of the deterioration is said to be the want of that care and attention which are so essential in all dairy operations. In past times, it was common for travelling instructors to go from farm to farm in Denmark in order to teach the people the best way of doing their work. This system has long been given up, and the dairykeepers, like a great many other people, think they are sufficiently skilled, and require no further education. Another cause given for the failing quality of the butter is the prevalence of large dairies, which in recent years have been established all over the country, and in which individual care and interest are not too prominent.

The *British Medical Journal* calls attention to a new form of milk adulteration in our own country. It is pointed out that trade journals contain numerous advertisements of preservatives for milk which will prevent that fluid from turning sour, and by which means it can be kept from day to day without loss. These nostrums are generally compounds of boracic or salicylic acids, and sometimes of bicarbonate of soda. Although these preparations are not actually poisonous, their constant absorption in small doses cannot but be prejudicial to health. Another form of adulteration is indicated in the use of colouring matter, the basis of which is annatto. The advantage to the dealer in using these colouring agents is, that milk which has been thinned by being deprived of its cream has the semblance of richness given to it by the addition of the colour. We are reminded that natural milk is white rather than yellow, except in the case of a few breeds of cows, such as the pure Alderney. But as long as the general public demand a product which is yellow, the trade is sure to comply with their wishes. The same remarks will hold good with regard to butter, which in its pure state is generally white, rather than yellow.

The incandescent gaslight, to which we devoted some little attention a few months back, seems to be making steady and satisfactory progress in the country. It has already been adopted at two London theatres, and at the Instrument Room at the General Post-office. It is also in use at Madame Tussaud's Waxwork Exhibition and at Willis's Concert Rooms, London. Its adoption at the Bank of England is contemplated. We are indebted for this information to the *Gas and Water Review*.

Another form of gas-lamp which is growing in favour is that which embodies what is known as the 'regenerative principle.' In these lamps, of which there are two or three varieties in the market, the products of combustion are consumed, and the burner is constantly fed with a stream of

heated air produced by the action of the lamp itself. In this way, a much higher degree of efficiency is obtained from the gas used; while at the same time there are no unburnt particles of carbon escaping to blacken ceilings or to work destruction upon books and furniture. The latest pattern of this form of burner is known as 'Thomas's Patent Regenerative Lamp.' Its general form is that of a small sunlight enclosed in a glass globe. Its air-supply is so broken up into thin streams by the peculiar construction of its parts, that the oxygen is supplied to it to the best advantage. Further particulars can be obtained from the Patentees, 55 and 56 Minories, London, E.C.

Mr Ellis Lever, who is ever active in the interest of our coalminers, has again called attention to the number of mining disasters which occur annually in this country. He tells us that the number of deaths from colliery accidents average twelve hundred a year, a large proportion of which are due to explosions of firedamp. There is every reason to believe that in the near future Mr Lever will have no occasion to deplore this great loss of life, for electric safety lamps for miners' use are now almost within reach.

The Secretary and Manager of the Edison and Swan Electric Light Company has recently published some information on this subject. In April last, this Company placed a number of their portable electric lamps on trial in certain mines in South Wales, where they were submitted to regular and daily testing. The miners were so delighted with these new lamps, that they declared that if the authorities did not provide them, they would pay for them themselves. In the end the owners of these very mines (Watts, Wood, & Co.) have ordered two thousand four hundred electric safety lamps to be manufactured, and there is no doubt that the force of public opinion will cause all other mine-owners to follow this noble example. The Edison Company claim the prize of five hundred pounds which was so generously offered by Mr Ellis Lever for the best and safest miners' electric lamp.

Those who are engaged in the management of dynamos and other electrical machines know to their cost that their watches get magnetised by these machines, and are soon rendered bad time-keepers, if not altogether useless. Various methods have been from time to time suggested for either preventing this magnetisation of the steel parts of watches or of demagnetising them after the injury has occurred. A watchmaker of Geneva has now succeeded in discovering an alloy of a metal which is quite unaffected by magnetism or corrosion, and which will at the same time answer the purpose of steel for watchwork. This metal is one of the platinum group called Palladium, and so far as we know, it has not been utilised before in any practical way, except perhaps in photography, possibly on account of its rarity and consequent cost. Balances and balance springs made of this alloy are said to have the necessary hardness, and in other ways are fitted for use in chronometers and watches. The invention is one of great importance.

As we have before indicated, the cheapening of the metal aluminium by modern methods of production has caused it to be extensively used in

manufactures from which it was previously excluded by its cost. Among the purposes to which it has recently been applied is the manufacture of plates for dental uses. It is said that when these plates are made from the pure metal they give better results than ones of rubber, and are of course far less in cost than those of gold. The metal is perfectly tasteless, and is at the same time extremely light and strong.

#### ' AN OLD FORTH TUNNEL SCHEME.

SUBMARINE tunnels are now an established fact. They have been successfully constructed under the Thames, the Severn, the Mersey, and elsewhere, and the practicability of such a means of communication beneath the bed of the English Channel is no longer matter of dispute. If Scotland is not yet possessed of one of these monuments to modern engineering skill, it is not because the idea is a new one to Scotsmen. So early as the beginning of the present century—in 1806—it was proposed that a subterranean roadway should be formed under the Firth of Forth; and if the project had been carried out, it would have been the first of the kind in the history of the world, at least since Semiramis is said to have diverted the course of the Euphrates until she had constructed an arched way over the bed of that river.

The Forth Tunnel was to afford an easy and agreeable way whereby the farmer north of the firth could drive his grain in his own cart to the Edinburgh market, the Highlander find a short cut with his cattle to the Lowland fairs, and the traveller escape the horrors of the *mal de mer* and other inconveniences. The principal ferries on the Forth were between North and South Queensferry, and between Leith and Kinghorn, or rather Pettycur, at the western end of Kinghorn; but powers had also been taken to make ferry-ports of Burntisland and Newhaven. Necessarily, the labour of loading and unloading merchandise, and of embarking and disembarking cattle for so short a voyage, was great, while it tended to the detriment of the goods and increased expense to the shipper. The tedium of awaiting tides, traffic, and weather was no less irritating to the traveller. All this was to be obviated by the proposed tunnel.

The chief promoters of the scheme were James Miller, M.D., and Mr Vazie. No difficulty was anticipated in carrying out the design, as the geological features of the coast gave indication of a satisfactory medium under water. Immunity from inundation was insured by the fact, that already the bed of the firth was extensively tunneled from both sides in coal-mining operations without incurring the inroads of the sea. The place chosen for the enterprise was not, as one would naturally expect, the narrow strait between North and South Queensferry where the Forth Bridge is now being constructed; the water was there too deep, and the underlying bed of whinstone too hard for cutting. This whinstone rock extended as far west as the Bimar Rock. Rather more than a mile farther up the firth, the bed was of limestone, out of

which formation rises the Dove Craig, or the Du Craig as it is called in the ordnance maps. But neither was this rock suitable for tunnelling purposes. Between these two beds of whinstone and limestone, however, there was supposed to lie a fine bed of freestone, similar to that contained in Rosyth Quarry, out of which the materials for constructing the docks at Leith were taken. Here, then, it was proposed to locate the tunnel, which, starting from the neighbourhood of Rosyth Castle, would trend shorewise until a depth of about seven fathoms below the shore was reached; then passing beneath the firth, would still descend to a depth of between twenty and thirty fathoms at the centre, as at this part of the firth the depth of the water did not exceed ten fathoms. The exit from the tunnel on the south side of the firth was to be a little way west of the Lintmill Burn, about half-way between South Queensferry and Hopetoun House.

The tunnel, if it had been constructed, would have been about two miles in length, and throughout fifteen feet broad and fifteen feet high, with an arched roof. Footpaths three feet broad were to be constructed on both sides, the remaining nine feet to be the carriage-way. The tunnel was to be lit either with oil lamps, or preferably, if it could be done, with 'hydrogen gas or inflammable air from pit-coal.' To expedite the traffic, twin-tunnels were suggested—one for coming, the other for going. The cost of the whole, including engines and pumps for keeping the tunnels dry, was estimated at one hundred and sixty or seventy thousand pounds, which it was proposed to raise by the floating of a Company with a capital of one hundred and fifty thousand pounds.

But would it have paid? The promoters thought there was no doubt about that. The exact amount of the revenue from the ferry at Queensferry was not ascertainable, but was set down by some at three thousand pounds a year; while others placed the amount at six thousand pounds. An estimate of the proceeds from the tunnel is furnished in the following: 5200 carriages, at 5s. each, £1300; 12,000 horses, at 1s. each, £600; 13,000 carts, at 2s. 6d. each, £1625; 20,000 cattle, at 9d. each, £750; 12,000 sheep, at 3d. each, £150; 80,000 foot-passengers, at 2d. each, £666, 13s. 4d.; allowance from government for mails and the passage of soldiers, £1000. Total, £6091, 13s. 4d. Besides this, the promoters thought they would draw off much of the traffic from the other ferries, as well as from such centres of industry as Dunfermline, Kirkcaldy, Dundee, Montrose, with the return traffic from Glasgow and the west. Altogether, a revenue of sixteen thousand pounds was considered safe for the first year, which would pay a dividend of nearly ten per cent.; while experience in cases where bridges had taken the place of ferries showed the certainty of a great increase of traffic, and consequently of profits.

The scheme was influentially supported at the time. But nothing came of it. Why it fell through, history, so far as we know, records not. But if Scotland missed the honour of being the first to present to the world the practical achievement of a sub-aqueous tunnel under the Firth of Forth, she is now being

honoured in the connection of the opposite shores of that firth by the grandest and most stupendous engineering operation even of modern times—the Forth Bridge.

#### A VOICE FROM THE WOODS.

I WANDER through the Autumn woods,  
And watch the slowly waning year  
Die out in splendour, far and near,  
Amid the chill November floods.

Ripe acorns drop, leaves gently fall,  
The earth with dim decay is rife;  
Yet in decay lurks hidden life—  
Life that shall burst grim Winter's thrall,

And throb and glow through Nature's heart;  
Thrill with new joy each leafy brake,  
And all the wood to rapture wake  
In which each living thing hath part.

The broad oak springs where acorns die;  
Far down beneath the wintry snow  
A pulse of life—or swift or slow—  
Beats evermore, unceasingly.

As one keen shaft of arrowy light,  
Shot o'er the hills at rosy dawn,  
With fiery splendour crowns the lawn  
That lay but now in cloudy night;

So, 'mid our brightest hopes' decay,  
When storm-clouds darken all the sky,  
Some gleam of immortality  
Shines in from far eternal day.

Winter but tells of coming bloom;  
And Spring of lusty Summer sings,  
Of Bird and Bee on happy wings,  
Of starry nights, of flowers' perfume.

And now, where mellow silence broods,  
I hear a voice far off, yet clear,  
Echo repeats it: 'She is here!'  
Among the lonely, waning woods.

I pace in joy the leaf-strown glade,  
And She walks with me, hand in hand,  
A dweller in that unseen land  
Where Time is not, nor sun, nor shade.

R. G. J.

The Conductor of CHAMBERS'S JOURNAL begs to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the Editor, 339 High Street, Edinburgh.
  - 2d. For its return in case of ineligibility, postage-stamps should accompany every manuscript.
  - 3d. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.
  - 4th. Offerings of Verse should invariably be accompanied by a stamped and directed envelope.
- If the above rules are complied with, the Editor will do his best to insure the safe return of ineligible papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH.

## THE FELLOWS GO HOME.

As the time for the Christmas holidays draws near, who, remembering his youth, will have the effrontery to maintain that it is worth while to grow up? How gladly would many men—men of substance, with limitless pocket-money and endless opportunities for amusing themselves—grow down again into their former discarded selves, just for the sake of being able once more to look forward with the old uproarious delight to the near and nearer approach of that most blessed of oases in the dull monotony of school-life, the Christmas holidays. It would be doing an invidious and ungracious thing to contrast against them the other holidays of the scholastic year; still, in all frankness, we must confess to a particular kindness for the December vacation, regarding it, that is, from the schoolboy's point of view. Easter is all very well; summer, with its seaside delights, its wholesomeness and length of radiant days, is not by any means to be dismissed unthankfully, or remembered without the satisfaction that comes of satiety; but winter—why, it is the paragon of holiday-times, the first and foremost of festivals.

We are very far from indulging in the sentimental longing of certain elderly gentlemen, who, recalling in after-life a few of the salient and isolated pleasures of boyhood, forgetful of its tedium and the unappreciativeness which comes of immaturity, look back with regret to their knickerbocker days, and sigh to be once more in a turndown collar. There are, when all is said and done, just as many thorns in an average school-boy's existence as in an average business man's, and they prick him just as sharply; and yet they both ignore the other's troubles; and while the boy longs to grow up, fondly anticipating the time when the Doctor's cane and frown will have no terror for him, and he shall be old enough to encounter *Æschylus* and *Bully Smith* on more equal terms, and floor them both, the man reverts regretfully to his one-sided recollections of boyhood, and would gladly barter his

manly privileges of pipe and tailcoat to be a boy again.

From months it has fallen to weeks, and from weeks at length to days, and not so many of them now before the jail door is flung open and the 'fellows' are on their way home. To be sure, 'jail door' is not what you might call a complimentary figure of speech, and one feels in using it that some sort of apology is owing to the worthy Doctor for casting a slur on the unimpeachable respectability of his establishment; but none the less the fellows are prone to regard themselves in the light of scholastic jail-birds, for, like *Sterne's* starling, they 'can't get out' while the term lasts, unless, indeed, as it sometimes happens to the more fortunate, they have the signal good luck to be taken sick of a fever or a smallpox. But now, as the year turns the corner into the month of December, the jail-birds begin to look forward hopefully to the prospect of immediate liberation on a scholastic ticket-of-leave. The lower forms make haste to throw off allegiance to their books, and under the elevating influence of the approaching enfranchisement, are inclined to be rebelliously jolly even in the awful presence of the Doctor himself. Exercises are prepared anyhow, or, with that wonderful reliance on a beneficent and resourceful providence which is among the most prominent and beautiful characteristics of boyhood, the fellows shelve them altogether, and trust to inspiration for some plausible excuse.

'Not prepared your work, Brown?' demands the third master, with an ominous calm. 'How's that?'

Brown Minor looks about him on the floor for an excuse; not finding one, he assumes a much-injured expression and mutters sulkily: 'Don't know, sir.'

'But you *must* know, sir!' retorts the third master sternly. 'Come, why didn't you prepare that exercise?'

After another gloomy pause, Brown suddenly breaks out into a smile, and, with genial audacity, explains that he thought it hardly worth while, you see, as the holidays were so near. Perhaps

the third master, who, you may be sure, is hungering like any lad for the winter holidays, has still a fresh recollection of his own young days, in which happy case he checks himself in a grim smile, and lets off Brown Minor, for this once, with a reprimand and a warning. Perhaps, however, he is not of such stuff as youth is made of, and has endured too much torment at the hands of boydom to be any longer tolerant of their foibles and faults; and then there is nothing for it but a short and agonising interview with the Doctor in his study after school-hours, from which the delinquent Brown returns scowling, with disordered toilet. The upper forms, more mindful of their dignity the more intimate their relations with the Doctor, still retain a semblance of discipline, and pretend not to be every bit as glad at the approach of the vacation as the younger fry, who go about bellowing that popular doggerel :

This time ten days, where shall I be?  
Not in *this* Acadamee—  
Hooray!

Brown Major, whose exalted position in life as a sixth-form boy will not, of course, allow him to hold much intercourse with his brother the Minor, is softened at the thought of holidays and home; and after school, is found engaged in affable and condescending chat with his brother on the prospect of the good times they may expect to be enjoying very shortly. Brown Minor grows loquacious over the joys of skating, and adds, as a brilliant after-thought, to the catalogue of anticipated amusements, 'Pantomimes!' Big Brown assents cordially to the skating, but hesitates dubiously on the subject of pantomimes, feeling more than doubtful as to whether the enjoyment of such puerile shows altogether consorts with his high destiny as a sixth-form fellow.

Even the advanced Latin and Greek class, which condescends to occupy itself only with the selectest and most incomprehensible of the classics, under the immediate tuition of the Doctor himself, and habitually wears tailcoats, and is vaguely reported to be able to turn anything into Greek without the aid of a dictionary—even this cream of the top form hails with satisfaction, and perhaps a rhyming Latin ode or two—its approaching emancipation from the long-winded orations of that most specious of advocates, Tully Cicero, and the idiomatic scurrilities of Aristophanes. They are heartily sick of the maligned Murena and that atrocious scoundrel Verres, and in the depths of their sixth-form souls, they long to exchange the sonorous *Æschylean* verse for the frivolous prattle of that other fellow's pretty sister whom they met at tennis in the summer.

From reckoning up the days, it has come now to counting the remaining hours of scholastic servitude. The fellows are seized with a wild craving for packing up. Such books as they are doomed to take home for study during vacation are buried deep at the bottom of their trunks, where it is not improbable they will lie, if not in clover at anyrate in clothes, till boys and boxes once more return into captivity. Trade revives spasmodically, and the prices of coveted commodities suddenly attain a premium. Those fellows who are luckily possessed of funds, taste the joys of the capitalist, and compete successfully with emptier pockets for the possession of

the white mice, railway keys, watchcases, police whistles, paint-boxes and jack-knives, which form the bulk of the merchandise of schoolboydom. At last the glorious day itself arrives when the mountains of luggage are piled up in the hall, and the fellows in their greatcoats crowd forward with ill-concealed joy to shake a farewell hand with Mrs and Miss Doctor. One or two only, of the higher Greek class, who have fallen docile victims to the yellow hair and charms of the Doctor's daughter, wear dejected faces, and flush with embarrassment when their turn comes to bid adieu to the Adored One. Tomson Major has even gone to the extreme length of wheedling one of the maids to smuggle an unsigned Latin ode *Ad Flaviam*, of his own manufacture, charged with high sentiment and false quantities, into the work-basket of his inamorata. But even Tomson Major forgets all about his unrequited love in the excitement of the journey to the station in the imposing file of cabs. As the procession moves off, the 'slaves' wave valedictory sheets from the windows of the deserted bedrooms, and the smaller bys cheer shrilly in reply. When the train steams up, there is a stampede for the reserved compartments, those being most affected in which no master travels to preserve order. It is bitterly cold—but what of that? Who ever heard of a fellow grumbling at the cold on the way home for the holidays? If it is snowing hard, so much the merrier, for some of the more mischievous fellows consider it a joke of the first water to let a platelayer on the line have a snowball full in his eye from the window of a flying train, and to watch his impotent indignation rapidly dwindling in the distance. At the intermediate stations where any of the fellows alight, there is cheering and to spare, especially if a pretty sister or a swell 'turn-out' meets one of the boys. And when the Captain of the school cricket club or football team quits the train, what a storm of cheering greets him from the throng of familiar faces crowding at the windows! Gradually, the train is lightened of its noisy freight, and the fellows grow quieter as their number diminishes and the tedium tells on their spirits. Swathed in rugs, the Doctor dozes fitfully under his newspaper. Tomson Major turns up his coat-collar and tries manfully to warm himself with thoughts of love. Brown Major falls asleep in spite of his tall starched collar, and dreams that he is Verres and has got Cicero down and is kicking that illustrious classic in the stomach. The train stops at its terminus. The Doctor wakes up, shakes hands with his small remaining band of scholars, who are hastening away in cabs, and takes the next train back again, alone. The fellows have all gone home.

#### RICHARD CABLE, THE LIGHTSHIPMAN.

BY THE AUTHOR OF 'MEHALAR,' 'JOHN HERRING,'  
'COURT ROYAL,' ETC.

#### CHAPTER LV.—TO THE GALLOPERS.

CAPTAIN EDWARD G., my paternal great-great-uncle, was a notable horseman in his day. Astley, the founder of the equestrian theatre that was the delight of boys in my youth, but which has

passed away with Sadler's Wells, Vauxhall, and the Colosseum, Regent's Park, was in his troop, and from him acquired his skill in horsemanship. Among Captain Edward's feats was one in which the pupil never equalled his master. He threw down the several gold links of a chain at irregular intervals along a high-road, and then, striking spurs into his horse, galloped over the course, and as he came to a link, swung himself down, picked it off the ground, recovered his position in the saddle, and so along the whole road, till he had collected in his left hand without exception all the scattered links.

The modern novel-reader emulates the achievements of Captain G., and the novel-writer is expected to distribute the several links of connection of his story along the ground at such regular intervals and in such conspicuous places as shall facilitate the reader's picking them up. The author must, moreover, well water and roll the way, and make it very straight, and be content if the gallopers over his course succeed in picking up some, though not all, of his story-links. The reader is essentially a Galloper. He, or, more generally, she, goes at the novel with dug-in spur and slashing whip and jerk of rein. The words are flown over as blades of grass, the chapter heads are passed as telegraph poles; away goes the galloper through page after page, faster, ever faster; there is no time for breathing or looking about; the descriptions are splashed through, the conversations skimmed, the moralisings skipped, the less important incidents are jumped; nothing is considered but how to reach the end as fast as possible, with a fair sample of links in the hand.

Now, consider! The writer has to write for these Gallopers. Is not the thought sufficient to take all heart out of him? An experienced writer who for a lifetime has catered for the reading public, and knows their proclivities as Sir John Lubbock knows earthworms, and Miss Ormerod knows blight, said to me: 'You will never become a popular novelist until you alter your style. You set before the novel-reader moral problems hard to unravel, and make your terminations sad. The novel-reader wants *neither to be made to think nor to be made to feel*.' In a word, I must lay myself out for the Gallopers. Lay myself out for the Gallopers! Is there a form of degradation deeper to which a literary man can descend? I must let myself be watered and rolled as a tennis-ground, to be raced over by the hundred thousand with voided brains, vapid hearts, mule-witted, caprice-led, the purposeless, pulseless, nerveless, characterless, without a noble aim or a high ambition, without having felt the needle-point, and had an arc begun about their sheep-heads of the golden nimbus of self-abnegation.

No; I will not lay myself out to be trampled by the idle feet of the ignoble herd of Gallopers. Let them turn aside when they note my ruggedness. I will throw up ridges and sink pitfalls, and be humpy and lumpy. Let them take the profanation of their tread off earnest work.

It is not the thoughtful and those with pursuits in life who are the novel-readers; it is the vast multitude of the do-nothing, whose whole aim is distraction, who read to kill thought, to kill healthy feeling, serious purpose, good resolu-

tion, generous impulse—to kill God's precious gift of Time. Shall I lay myself out for such as they? I can understand Faust selling his soul to the devil for youth; or the architect of Cologne Minster for fame, or many another for wealth. But there is an infamy worse than that, and that is the sale to the Galloping novel-reader. Asmodeus, Mephistopheles, Satan, call him what you will, is an *Intelligence*; but the modern novel-reader, Gwendoline or Edith, or Mabel or Florence, whatever her name be, is a soap-bubble, void of everything but an evanescent exterior iridescence. Lay myself out as a rolling-ground for these bubbles, blown along by the wind! God forbid! I would tear myself to pieces with my own hands rather than stoop to such baseness.

So—if I choose to force uncomfortable thoughts on my readers' minds—I will. If I choose to end my story unhappily—I will. I consider my own standards, and measure my work by these.

In the *Compère Mathieu*, a French story of last century, the penultimate chapter shows us the hero in prison, brought there by a logical sequence of events, chained hand and foot, with the gallows preparing for him outside the jail. In the final chapter we are abruptly introduced to the *compère* at large, esteemed, and wealthy. The reader asks naturally, 'But how has this sudden transformation come about?' The author answers: 'I know no more than you do. My publisher told me that readers desire a novel to end happily, so I have ended mine happily. If the termination does not fit on to the events that go before, that is your affair, not mine.'

I will not say that my publishers and my readers are so exacting as to force me to do this; but they hit me very hard on another point. Both insist on a story being three volumes in length. Now, when Richardson wrote, he was allowed to occupy seven volumes with the affairs of Sir Charles Grandison, and of Clarissa Harlowe, and so leisurely to unfold his story and develop his characters. We authors now have not this liberty, and we are forced to crush our story into less than half that length. To do this, we are obliged to do our work imperfectly; we cannot follow the thread of the story evenly to the end, and show every stage in the history of our heroes and heroines. As characters are moulded and grow, we want time and leisure to exhibit the growth and indicate the process of modelling; but we have our hands tied by the inexorable system of three volumes. My readers—I am not addressing the Gallopers, whom I have scared away, and who are careering wildly, purposelessly elsewhere, kicking up their heels at me, as the ass at the sick lion—my readers—my few left, who are also my special friends—must excuse me if I am forced to carry them hastily over a twelvemonth, or to put into their hands some of the links of the chain, without many words.

Mr Sellwood has been consecrated Bishop of Bodmin; and Mr Cornellis has married the old lady, Miss Otterbourne, and is engaged plucking his goose, and lining his nest with her feathers. Mary Cable is growing up into a tall, beautiful girl, with eyes so blue and full of sun, that when she looks into the face of a man, he is dazzled, as if looking into the summer sky. The children are all grown, and they are all, moreover, vastly

improved by the teaching they have received at the cottage from Josephine. But as to any approximation between their father and Josephine, there was none apparent; in that particular all was where it was.

Mary was the pride and joy of her father's heart. He loved all his children, but he was most proud of Mary, and justly; her equal was not to be found thereabouts. That the young men looked after her and admired her, was right; it was her due, but, thought Richard, she shall be given to none of them. Not one of them deserves such a treasure. Cable continued at his business. With seven girls to provide for, he must make a good deal of money; and all the money he made, he put away in the Duchy Bank, paying off in instalments his debt on the house. His improved position brought him more in contact with the people of St Kerian than before, when he was a poor stone-breaker on the roadside. His sourness disappeared, but in its place came pride. He spoke with the farmers and tradesmen, and they respected him, his talents, his practical good sense; but the barrier between them was not wholly broken down. He had no intention that it should be. Towards his own children, he had always been kind, and indeed indulgent; but the change in his temper, his hardness, sternness, bitterness towards those without, had gradually and imperceptibly affected his conduct towards his own within his household. He was kind, indeed, and indulgent still; but he lacked now what he had possessed of old, when he had had a childlike spirit, that perception of the requirements of joyous children's souls, full of exuberant life, which is that which endears elders to their children. If he would have made his daughters happy in his society, he should have sought happiness in himself, laid up there a store of it, from which to distribute to all who sought it at his hands. But instead, in the granary of his heart was a harvest of much ill seed.

One day, Mrs Cable said to him when he was alone: 'I don't know what you think about it, Richard, but it is right that you should know that young Walter Penrose is nightly taken up with Mary. He's a fine fellow, and nobody can say a bad word of him. He has been some few years in Launceston, and now he is home again, and is likely to follow in his father's shop, after the old blacksmith gives up. As children, they have always had a liking to each other, and now he is here, I see he is after Mary. In church, it seems as though he could not keep his eyes off her; and whenever she goes into the village, he is sure to be in front of the blacksmith's shop to have a talk with her. She is very young yet, only seventeen; but—she must marry some day; and if you see no reasons against it, they might come to an understanding, and wait a twelve-month.'

Then Cable's wrath foamed up. 'I do see reasons against it,' he said. 'I see what this means. Because I have worked and made money, and the St Kerian people can't break into the bank and rob me of my money there, they set their sons on to follow my girls. I suppose the saddler's son, and the cobbler's boy, and the miller's, and the chimney-sweep's, if there were one, would all be looking for a seventh of my earnings, by snapping up one of my daughters,

and so I should have milled and toiled for St Kerian folk, that they might spend.'

'But if the girls should like the lads. There is nothing against Walter Penrose; and I believe that Mary'—

'It is enough that I will not have it,' said Cable impatiently. 'She likes what I like, and has no desire beyond my will.'

One Sunday afternoon, after church service, old Penrose the blacksmith came out through the graveyard alongside of Cable. The girls walked behind, Mary with Martha; then the twins Effie and Jane, who were inseparable; and then the rest. The blacksmith was a fine man, broad-shouldered, big-handed, with very black eyes, but soft as velvet, and black hair the colour of the culm in his smithy—now, however, dusted with gray, as though ash had got among it. Instead of turning away at the gate to go to his home, he walked on with Cable. He did not live adjoining his smithy. The shop was on the road to Red Windows. Penrose talked a good deal; Cable answered, but was not a great speaker. All the better company—he was a good listener. Penrose talked about this and about that, and Cable nodded. He was wondering why the blacksmith accompanied him beyond his own house.

Presently Penrose said: 'Well, Mr Cable, I reckon we're getting on in life, and want to see the young people settled. I know my missus be mad set on it, and I should be glad to have my son fixed here. He knows his trade, and there's plenty of work to keep both him and me.'

Cable jerked his head impatiently.

'My Walter is a proper lad; though I'm his father, I say it. You may look round St Kerian and you'll hardly find a better; and the maiden he fancies'—

Then Cable stood still and turned, and looked down the road; he saw the little group that followed had been invaded. Young Walter Penrose was there, between Martha and Mary; but his eyes and his words were directed only to Mary. All the blood in Cable's body spurted to his face, and his eyes glared like the blacksmith's forge when the bellows were in full blast. 'What do you mean?' he asked hoarsely.

'I mean this,' answered Penrose, 'that my Walter has set his heart on your Mary, and I reckon the maiden is not contrary. I'm agreeable.'

The colour went out of Cable's face; his lips assumed a livid and bitter appearance. 'Indeed,' he said, 'you are agreeable, are you? I'm not.' He turned; he had reached the gate to his garden; and he beckoned the girls to come on. He saw the blacksmith shake his head as he met his son; then he saw the colour disappear from Mary's cheek, and when she came to the gate her head was drooping, and, if he could have seen her eyes, he would have seen them full of tears.

After that, it seemed as though a bar of ice had formed between him and his eldest daughter—a bar which no sun-ray of love could melt. The gentle Mary said not a word. She was meek, obedient, docile as ever; but she did not meet her father's eye with her former frank smile, nor seek his society unsolicited.

Martha became petulant, pouted, and seemed

to harbour a wrong, and resent it. Effie and Jane, the twins, looked on him with shyness, and when he came upon them laughing and talking, they became silent, and answered his questions with manifest timidity. Had his children ceased to love him? No; but they had begun to think of him as one who might stand between them and perfect happiness, one who might spoil their brightest schemes.

Cable became more morose. He watched Mary. He saw that she was unhappy; that she was becoming pale and thin; the joy of her life seemed withered, her eyes had lost their sparkle, and the dimple rarely formed now about her lips. 'I see what it is,' said Cable to himself. 'She will not forget that young Penrose, till she has found some one else to regard. I'll talk to Jacob Corye.' So he rode over to the *Maggie* at Pentargon.

Mr Corye was a prosperous man. Cable, who had had such close dealings with him, knew that he had put by a good deal of money. Moreover, Cable could not forget the debt he owed to Corye for having put him on the road to make his fortune. Corye owned a very considerable farm, as well as the *Maggie* inn. Of late, he had purchased a second farm, and helped by Cable, he was fast becoming the most prosperous yeoman of his district. He kept on the inn more out of habit than for necessity. Shortly after this visit to the *Maggie*, Jacob Corye and his son Joshua were invited to supper at Red Windows, and then Cable and his two elder daughters were invited to spend an evening at Pentargon. Little Bessie had been failing of late, complaining of her back, looking pinched in face, white and frail.

'I have asked Mr and Mrs Corye,' said Richard Cable, 'to let Bessie go to them for a bit. Do you not think, mother, that the sea-air may brace her up? You see, here we have our backs to the winds that blow over the Atlantic; but at Pentargon, she will draw them into her lungs, fresh off the water.'

'No doubt it will do her good,' answered Mrs Cable. 'But who is to be there with her?'

'Mary or Martha.'

'But Mary or Martha cannot stay there long; and I think you should give Bessie six weeks, or, better, a couple of months by the sea, before the winter sets in.'

'Mary cannot remain at Pentargon above a fortnight.'

'Then,' said Mrs Cable, and looked her son hard in the eyes, 'let her go with the child. She will care for her—as a mother; and it will do her good also. She is looking weak and frail, as if she were wasting away. Hope deferred maketh the heart sick, and the body breaks down under a sick heart.'

'Make what arrangements you will, but do not consult me,' said Richard. 'Jacob and I have a fine scheme on hand. It was his notion, but he did not see his way to getting it clearly worked out till I helped him. It is to build a large hotel on the cliffs, and to advertise it well; and then there will be streams of people come there all the summer and autumn for the splendid air and scenery. There is to be a flight of steps cut in the rock down to the bay, where there will then be a first-class bathing-place. Jacob will

make many thousand pounds by the speculation, see if he does not, and I shall venture my savings in the same. It is sure to answer.'

'You think of nothing save making money,' sighed Mrs Cable.

Now, occasionally, on Sundays, young Joshua Corye came over to church at St Kerian, and walked back with the Cable girls as far as the gate, when Richard asked him to step in and have tea with the party before riding home to the *Maggie*. Joshua came over ostensibly to bring Richard tidings of his little Bessie, who was at Pentargon, and to beg she might stay on there. The child was not well, weak, but ceased to complain, and enjoyed the fresh air. The young person who was with her was most attentive and gentle with the feeble child.

'I don't want to hear about her,' said Cable. 'Tell me about Bessie; and what your father has done further about the hotel. I've a notion, tell him, that it must be called *Champagne Air Hotel*, because the air you breathe on those cliffs goes sparkling and effervescing down your throat into your lungs. And, I fancy, the name would draw.'

Young Joshua Corye was a steady, decent young man, with a very fresh-coloured round face, and small brown eyes. So fresh-coloured were his cheeks that if they had been skinned, they could not have been redder. He was a dull young man; he could talk of harriers and badger-hunting, and rat-catching and rabbit-shooting, and boating, but of nothing else. He always wore very tight half-trousers, half-breech, buttoned over the calf from the knee to the ankle.

Cable was very keen on the idea of the *Champagne Air Hotel*, and he had pitched on Joshua Corye for Mary, because he was quite sure the hotel would prove a vast success. Old Jacob would pocket a great deal of money, and the fortunes of the young people would be made. Of late, batches of knapsacked young men and gangs of athletic old maids had taken to walking along the north-west coast of Devon and Cornwall, and the accommodation was scant for visitors. Cable schemed a coach in connection with the Exeter and Launceston coach, which would carry passengers right on to *Champagne Air Hotel*. It might be made a sanatorium, a great bathing establishment. The possibilities of making money out of it were numerous. Jacob Corye had his own farms, and could supply his hotel from his farms, and so create a market in his midst.

Now that Bessie was at the *Maggie*, Richard did not go over and see her; but he was eager to hear tidings of her. Before she went there, he frequently rode over; now, not at all.

Cable was sitting in his summer-house one warm day, when he observed young Walter Penrose coming up the hill with some iron staples he had been lengthening for a farmer beyond Red Windows. At the same time, Mary was coming down the road with a pitcher for water to a spring where the water was softer than that of the well and better suited for her flowers. Richard Cable watched them with some curiosity. They were both unaware that his eye was on them. They passed each other very close to him. He could see Walter's dark eyes full of entreaty, fixed on Mary, and that he let fall some of the staples. Mary hung her head; she did not speak,

she did not look at him; but she went on to the spring. A moment after, when Walter had turned the corner and was out of sight, Cable heard her sink upon the step of his summer-house and burst into sobs. She had laid her head against the doorpost with her hands over her eyes, and she wept there for a quarter of an hour; her father listening, agitated within, unwilling to come forth and reveal that he had witnessed her sorrow.

He was troubled for some days after that; he was half-tempted to relent, but his pride stood in the way. He would not go to old Penrose, cap in hand, and ask him to accept Mary as his daughter-in-law. Besides, he and old Corye had settled between them that Joshua and Mary were to be installed together in *Champagne Air Hotel*.

'Mother,' he said, 'there's going to be a confirmation in St Kerian's church, and the bishop—our old parson at Hanford—is coming. There is not one of my girls as yet confirmed; they shall be confirmed together, all seven.—Don't tell me that Mary is too old or Bessie too young. It is my wish. And, mind you send to that person who does the needlework, and tell her to get ready seven white dresses for the seven girls before the bishop comes. I don't know, but perhaps he'll be pleased to confirm the seven little maids, all of whom he baptised at Hanford; and I'm not sure but I shall be pleased to see him—if he's not forgotten me.'

'Richard,' said Bessie Cable, 'there is a white silk dress that she wore at her wedding. She gave it to me to do what I wished with, to cut it up for the children if I liked. Shall I use that for one of them?'

Then Richard Cable's face became red as blood. 'No!' he said. 'Do not touch it. Seven white robes, and this—an eighth.'

#### A VISIT TO VIZAGAPATAM.

IMAGINE yourself on India's coral strand, embodying all one's boyhood's dream of an Eastern seashore, with palms, bananas, and every sort of luxurious vegetation. Native huts, conical in shape, roofed with palm-leaves, and walls of the same, scattered irregularly along the beach. Large boats, twenty to thirty feet long, in shape like the paper boats we made when children, drawn up high on the sandy beach; dusky natives lolling about in the boats, or lying asleep under their shade in the sand; dark children screaming, quarrelling, chattering, racing. This is the boatmen's quarter. When the steamer brings you into the port, who are the first to greet you?—who paddle gaily alongside, chattering, and singing?—who crowd the sides of the ship, and actually venture to come on deck, eluding the vigilance of the quartermaster at the gangway? None other than our lazy, idle-looking, dusky friends; now that work is to be obtained and money to be gained, transformed into lithe, muscular, and daring boatmen.

Well, you stand on the steamer's deck, and watch what appears to be a canoe coming out from shore, two or three natives paddling for dear life. How it shoots along—how the spray

is dashed aside; now it seems half under water, then half out. In a few minutes you find the canoe is nothing but two or three logs of wood fastened together, every wave dashing over this rude structure. This is the catamaran. One requires to be a good swimmer to use such a craft. I have known of one or two Indian officers who have managed this sort of boat. Suddenly, one man on nearing the vessel takes a letter from the cloth round his head, and soon brings it on board. This letter is for you, from some dear old friend of years gone by; for one does not often meet in India, as one's people in England imagine. What emotions are stirred in your breast—what scenes called up! Buried in reflection, you descend to your cabin, and taking a few things with you, go on the quarter-deck to the gangway, and enter the first large boat you find unoccupied, unless your friend sends the Master Attendant's boat for you. Be careful in getting in if the weather is at all rough, as the boats are very buoyant. However, now you are in the boat, the boatmen ply their oars, which are fastened to an upright spar on the gunwale. They commence a monotonous solo with a chorus, and all goes well for a few minutes; then comes the tug of war, as you may say, with our furious element the sea. You reach the bar, think of Barne's 'Ancient Mariner,' and sing the first chorus to yourself. In no time you dash over the furious surf, and are in calm water, lined with rocks, below the cliff called the Dolphin's Nose. You are in the mouth of a river unperceived before, and soon draw up alongside a low jetty. Here are the British India Steam Navigation Company's offices, and the Master Attendant's house. Should you be a stranger, the Master Attendant, though an 'ancient mariner,' will not treat you like the wedding guest, and cause you 'to beat your breast;' nor need you call him 'a graybeard loon.' Nay; rather he will treat you sumptuously every day. Be sure you ask him how he fired a salute to the Peiho River. Master Attendants are old seadogs in all Indian ports, and finer fellows, heartier companions, you will nowhere find.

Now you are on shore, you must look about you. Few people know Vizagapatam. Why? Because steamers remain here but a short time, and as a passenger, you have no time to land; and when it is at all rough, the bar and the surf counterbalance on the wrong side a few hours on shore here, unless you are an observant man, and take an interest in the native and his habits. These natives are different from any you will probably meet anywhere in India. When you do meet him, you will scarcely recognise him, as his originality and his primitiveness are worn off by civilising agents.

Face the sea, and look to the right; here is the Dolphin's Nose, a near likeness to your grand old Shakespeare Cliff at Dover, but of hard stone instead of chalk. Go to the top of it, and look down the coast, you may fancy the Isle of Wight. Look inland a few miles off—a range of hills. Now, north along the coast, you might imagine yourself in a combination of Plymouth, Eastbourne, Hastings, &c. Fine scenery. The sea, with lights and shades such as you may see at any time on the seacoast of dear old England.

Your heart greets the country, and glows with charitableness to the inhabitants, whom you will find worthy of it.

Go down to the shore again and climb the heights, keeping Shorncliffe Camp in mind; you come to a flagstaff, a parade ground, a few barracks, some larger buildings, which are Court Houses. This place reminds you now of Deal. In these barracks are a few old veterans with their families—old veterans who have been through the Indian campaigns, and have been pensioners here for twenty years back, to my recollection; for it was then I paid my first visit to Vizagapatam as a passenger in a passing steamer, and I had no time to go farther than this spot. On my second visit I did not land. On this my third visit, business has delayed me some days, and given me an opportunity of seeing what I now describe. Three visits in twenty years is as much as many of us in India can acknowledge to; and nowadays, very few people know the place at all. Its glories have departed—to return, I hope. Its glories consisted in a large military cantonment, with a general. Three miles off is the old cantonment of Waltair. It then had several regiments, a large society of nice people, bands to play at Scandal Point, amusements of every description, such as you will find in any military station in India. In short, Waltair was a gay, lively place, and worth living in. The houses were good, gardens fair, roads passable. All was fair.

Turn now to the present time—no soldiers, no bands, a deserted and forlorn appearance, and, comparatively, a 'Sleepy Hollow.' I say comparatively, for there are military and civil officers at Waltair still, as good as in the old days, hospitable, kind, and agreeable to strangers. These officers have offices in Vizagapatam, three miles off, rather far for business. I would recommend them to urge the construction of the railway to Vizagapatam. And let the residents of Bimlapatam, which is ten miles or so north on the coast here, also back up the proposition of the rail to Vizagapatam, and not fight to have it at Bimlapatam. So far, between the quarrels of Vizagapatam and Bimlapatam, the railway has fallen through, and the funds which government would have guaranteed, have been devoted to other railways.

Now for a return of the glories of Vizagapatam and of Waltair. Let the railway be opened via Jeypore to Vizagapatam. Hey, presto! the scene changes. Vizagapatam becomes the Madras of this coast. Who knows what would happen next? I am not an engineer or a nautical wiseacre; I will not dilate on chimeras.

Take your stand at the flagstaff; see how the cargo-boats ply to the steamer, to and from shore like ants, the paddles moving like their legs. These boatmen make about four rupees (eight shillings) a month—barely a subsistence for their families. If it were not for the steamers which call here, they would get but little to live on. There are about five hundred boatmen and one hundred and sixty boats at this place. The boats are used in relays. Nothing but native rope is used to keep the timbers of these boats together, which is soon rotted by the salt water; hence the necessity for so many boats to take the place

of those under repair. The trade here consists of hides, oil-seeds of various kinds, *gingeli*, &c., and jaggery, made principally from the sugar-cane, which the natives of late years find will grow favourably here. Some jaggery is also made from the Palmyra palm. The rice here is generally at a moderate price, and little, if any, is exported. At certain seasons of the year, a brisk trade with Europe direct is carried on with vessels both sailing and steam. This port also supplies a great deal of the labour in Burmah and the Straits of Singapore. The labouring men come from the districts surrounding Vizagapatam; many of them prosper in Burmah; but sad cases of poverty and broken-down health return. The population is strong and robust, though the districts here are noted for bad fevers, which especially attack Europeans.

Leaving the flagstaff, you can now pass by the Post and Telegraph Offices, and take a turn in the town. What has been seen or written of any bazaar in India, and is so familiar to all residents in India, will be seen also here: numbers of shops with fruit—custard-apple and plantains being good; clothes-shops for natives only; grain; earthen pots; iron, brass, &c. Fancy-baskets, boxes, paper-cutters, and such-like, are also made here, and can be obtained on board ship as the natives bring them. The prices are ridiculously high, and of late years the natives have palmed off inferior work. The articles are made up of horn, ivory, sandalwood, and porcupine quill. There is also lackered ware. I would recommend sandalwood articles to be purchased at Bombay. You pass through the bazaar, and you can then drive on to Waltair. Some of the houses and gardens at the latter place are on well-selected sites; but the whole appearance of the town, though a pretty place enough, lacks the neatness of an Indian cantonment. The soil is much broken and rocky. After driving round the place, take the beach-road. A beautiful view is here open to you; but as you go along, it is spoiled by the fishermen's quarter. These huts should be removed to a more convenient site; the latrines, which appear to be seldom used, are alongside the road on the sand. If the huts were removed to leeward of the town, the health of the population would be improved. The ground should also be kept by the municipality of Vizagapatam for the future palmy days of the railway. May they soon come, is the wish of all! The rail will certainly tap the whole district of labour, and prevent emigration. All the steamers calling here belong to the British India Steam Navigation Company. Until lately, they used to run weekly between Calcutta and Bombay via Madras, carrying the mails; but the government contract with this Company having ceased at the time we write, the visits of the weekly boats are irregular, and not to be depended upon, causing a great deal of inconvenience to the mercantile community and to the public generally. Fortnightly steamers, which are still under contract with government, call here for trade with Burmah, carrying mails. The steamers of this Company have the monopoly of the coasting-trade, which is very much to be regretted, because it has a tendency to hamper the general trade of the various parts, which a wholesome competition

would remove. An occasional steamer of the Asiatic Company calls here; but these visits are so seldom, that little benefit is derived therefrom. There is nothing to be said against the boats of the British India Steam Navigation Company, for they are certainly everything that is desirable for the comfort of passengers and the trade for which they are built. They are officered and navigated by a very fine class of commanders and officers, who combine the qualities of seamen and gentlemen, and who do everything they can for the comfort of their passengers. At the same time, one may be sure that a monopoly of this kind is prejudicial, and the general resources of the district can never be fully developed while it exists.

## THE OLD SECRETAIRE.

A CHRISTMAS STORY.

By FRED. M. WHITE.

IN FIVE CHAPTERS.—CHAP. I.

THERE had been a Secretan at Woodside Manor for three hundred years, from the time of Norman Secretan the Catholic, down to that of Myles Secretan, the present representative of the race, who thought as a man of the world of the family dignity, and scoffed openly at the family ghost. A wing of the great house, now fallen partly into disuse, contained the Haunted Chamber, a wing which Myles Secretan vowed to have restored to its pristine glory some day when the fortunes of Woodside should mend; for, three generations of wild Secretans—Walter, with a taste for gambling; Arundel, friend and boon-companion of Edgar Warren of Normanton Grange, a neighbouring great house, for the Warrens and Secretans had ever been closest of friends; and lastly, Clive, who had been one of the Pavilion intimates, and a prime favourite with 'the first gentleman in Europe'—had brought the resources of Woodside to a very low ebb indeed. The favour of kings is proverbially a fickle thing, unless one happens to be a Brummell, as Clive Secretan had found to his cost; and thus it was that the west wing remained in its half-dismantled state, and the ghost walked o' nights, to the awe and terror of the neighbourhood.

It was not such a very old story, or a very ancient spectre either, as it only dated back as far as the present possessor's grandfather. There was one old servant in the house—a dreadful man, nearly ninety years of age, with white bushy eyebrows and keen black eyes—who remembered the tragedy—Silas Brookes, the unfortunate Arundel Secretan's valet. But even he never spoke about it, and only listened when the story was mentioned with suspicion and hatred glowering out of his evil dark eyes. The servants said he was mad—that the recollection had turned his brain. Once, years ago, he had told the story, and was never heard to mention it again.

He was perhaps the wildest of them all, this friend of Edgar Warren's, with his handsome face and soft effeminate manner; his carefully paraded vices, and mad love of gambling. For a time,

Walter Secretan, the father, had been proud to hear of his son's social success, of his conquests and his gaming exploits in connection with the most famous men in Europe; of the tales which came down to the world-worn old roué in the peaceful Kentish village, and reflected, as it were, a lustre upon himself. There was some one else, too, who heard these tales, and wept over them in secret—pretty Mistress Alice Mayford, the vicar's daughter, who wore on her finger a rose diamond in a quaint setting, and something warmer in her heart. She heard all these things, watching and praying for the time when such vicious pleasures should pall and 'the king come home again,' which he did at length; and the stalled ox was killed, and presently there was a quiet wedding at the little church under the hill.

But Arundel Secretan had too much of the swashbuckler in his blood to settle down at twenty-six, even with a beautiful wife to bear him company, and a doting father at his beck and call. For hardly had the cherry orchards bloomed again, ere Warren, fresh from a continental tour, was in town, hunting high and low for his *fidus Achates*, and at last found him out. There was a new actress to see, he wrote, a score of new amusements; for the sake of old times, a week, only a short week, and then he might return to his peaches and Ashford ale for ever. Arundel hesitated, and finally fell. For three whole years they saw nothing of him, but they heard much—tales from the Levant came, filtered through gossips from town; sad stories from Rome, and Venice, and Florence, yet nothing from the wanderer save the constant cry for money. Old Walter Secretan grew grayer and grimmer; he was harsh and hard to all save Alice, and what they suffered together, no one ever knew. The master of Woodside wrote at length refusing to send further funds; and then the heir came home—home one night when they least expected him, clanking with whip and spur into the great dining-hall, where injured father and outraged wife were seated, as if his absence had only been for an hour. Oh, but he was changed—three years of vice and unbridled license had set their mark upon his face, had clouded the open forehead and bleared the eye. His wife, poor child, would have risen and fallen at his feet for very joy, but that Walter Secretan motioned her back, and called for another cover with a coolness that astonished the trembling old seneschal, and struck him with a presentiment of coming evil. It was a strange meal, with no word spoken on either side.

'On my honour, your modern husband has but a strange fashion of showing love and devotion to his bride,' said Walter Secretan, when the cloth had been drawn, and the wine set in great coolers, and Mistress Alice had gone tremblingly to her chamber. 'Odds-fish, but you take the matter coolly. In my time it would have gone hard if'—

'In your time,' Secretan the younger answered languidly, as he brushed a crumb from his velvet skirts. 'You kept your vices closer at home. With our greater regard for the proprieties, we take them abroad—not quite so dutiful, perhaps, but a great deal more wholesome—for Woodside.'

'And now, forsooth, that my patience is exhausted, the supplies have stopped, you come home to "eschew sack and live cleanly!"'

'We both seem to be labouring under a mistake, sir; and I will be perfectly candid with you. I have no intention of assuming the part of the prodigal son—a character which, pardon me, would as ill become your unworthy servant as the other character would befit you.'

'Fore George, your elegant tropes go clean over my head,' the father said with some show of anger. 'Leave your fine phrases where you seem to have left your heart and your manhood. You come down here neither to seek forgiveness nor to be forgiven. Why do you come at all?'

Arundel helped himself to another glass of claret, and crossed his elegant legs in an attitude of utter nonchalance. 'Most honoured sir, what is the one thing that should bring me from the sweet shady side of Pall Mall to such an *inferno* as Woodside?'

'And that one thing? omitting such trifling circumstances as love and duty, for which I humbly ask your pardon for recalling to your mind,' said Walter Secretan sardonically. 'I am all ears.'

'Need I say that I am alluding to money?'

For the first time during the interview, a smile broke out upon the listener's dark handsome features. 'I am heartily glad to hear it,' he returned; 'and all the more so that you will not get it. No, if you go down on your knees to me and swear reformation by all the saints in the calendar, not another guinea do you get from me; no, not even if it would save you from starvation. If my son is a heartless profligate, I will take care that yours does not suffer for his father's sins.'

For the first time the younger man showed signs of agitation and alarm. 'There is more than one way of suffering for a father's sins,' he said.

'I know it—who better!—as well as I know by your manner that you have brought dishonour on the house. And so yonder innocent lad's patrimony is to be the price of your absolution. Why not go to your fine friends for money? Is it a greater sin to rob them than rob an indulgent father? Go to your faithful friend from Normanton yonder, the immaculate Edgar, who would prate of love and honour, whilst the doors of all honest men are shut in his face—ask him for the money.'

'This is vulgar prejudice,' Arundel exclaimed, stung into retort by these bitter words. 'If the man you speak of was in England, I should not be here to ask this favour of you now.'

'I believe that,' said Secretan. 'You would not come unless you were forced to do so.'

'Edgar would help me cheerfully enough, only he is away, no one knows where, upon one of his mad expeditions. It is a matter of life and death with me—a debt of honour to be met—a debt so large that I have arranged for three months in which to raise the money.'

'On my honour, you have been sustaining the family reputation! And who is the fortunate individual who has been astute enough to get the better of so accomplished a dicer and card-player as Arundel Secretan?'

'Lord St Devereux—a name, I believe, known to you.'

'Known to me in years gone by as a disgraced

blackleg and notorious rōué. By the blood of my ancestors, but you have been figuring in noble company!—And the amount?'

'Nearly thirty thousand pounds, so far as I can recollect.'

'And which the immaculate St Devereux will never get,' returned Secretan with the same grim quietness. 'I have done enough, and more than enough. St Devereux and a son of *mine* together! Borrow this money—beg it—steal it if you like, but never mention it to me again, or I shall forget our ties of blood and strike you where you stand.'

The younger man rose quietly, a ghastly pallor on his cheeks. He hesitated for a moment ere he spoke again. 'You will not deny me a night's shelter?' he said.

'No; Woodside will hold us both. Stay here while you may; come and go at your pleasure. My penance will be the contemplation of my own handiwork. Your penance has yet to come.'

Arundel Secretan walked up the open staircase, past the frowning ancestors he had dishonoured, with white set face and glittering eyes; past his wife's room, to the apartment they had prepared for him. His social excommunication had come—he had read the death-warrant in his sire's determined aspect. For more than an hour he sat in silent thought. There were pens, ink, and paper on the table, and as his troubled gaze fell upon them, his brow cleared a little and he began to write. The writing lasted till nearly midnight, till at length the broad sheets were folded and addressed to the friend whom his father had just maligned so bitterly. Then the writer rang his bell, and told the servant to send his man, Silas Brookes, to him. He came, silent and lynx-eyed, listening respectfully to his instructions. He was to start on the morrow for Italy; walk, ride, fly, or crawl, anything so long as the precious packet was delivered into Edgar Warren's hands without an hour's unnecessary delay. Silas Brookes took the packet and the accompanying purse of gold without a word, and saddling a horse in the stable, rode out into the night upon his errand.

So this rarely faithful servant turned his face eastward, and nothing was heard of him for many days. Arundel Secretan meanwhile lived a quiet retired life, rarely appearing at meals, and when he did so, the set frown was on his brow, the haunting anxiety in his eyes. He seemed to shun society, even that of his wife and child, though Alice's love was not of the kind to be killed by any coldness or neglect; but he had so strangely changed, so hard and cynical, that her gentle nature turned from the politely sarcastic phrase as from a blow. Two months went by; the leaves had fallen from the trees, the earth was bound in iron bonds, a thick sheet of snow lay in the forest drives and over the desolate lawns. The Yule-log was trimmed and placed outside the great hall door; the red holly-berries and sickly white mistletoe hung on picture and spear and armour. There was a sound of joyous revelry in the servants' hall, echoing faintly in the great dining-room, where the silent two sat over their weary repast—a Christmas Eve without love or harmony, but a moody silence, till the sharp ring of a horse's hoofs outside roused a little languid attention. Arundel Secretan heard the sound, and rose to his feet, a great shout bursting from his lips.

Silas Brookes stood in the hall, a fine white powder upon the cape of his riding-coat, and sternly silent, as if his absence had only been for an hour. He bowed his head to his master's glance of interrogation, and signified that the latter should lead the way. Once up-stairs in Secretan's chamber, his natural reserve gave way.

'I saw Mr Warren,' he said, still standing, and speaking mechanically, as if repeating a lesson. 'He has been, nay, he is very ill, sir; but he was pleased to hear from you, the more that he has a presentiment you will never meet again. And then he read your letter.'

The listener laid his hand upon his heart, as if to check the violence of its beating—there seemed to be a band of iron round his forehead, crushing into the heated brain. 'Get to the point!' he exclaimed. 'The answer—the answer!'

'I saw him read every line, and smiling in the way he used to smile when anything amused him. "Give my compliments to your master," he said, "and tell him that even I cannot make bricks without straw. It is a lesson I have been trying to learn from the Jews without much advantage to me, but considerable profit to them."'

'And that was all he said?' asked Secretan calmly, though the reply was so like the man, he knew it must be so. 'Nothing more?'

'Nothing more, sir—not a word.'

'And that man was my friend and my debtor!' These were the last words Arundel Secretan ever spoke. Without further hesitation, he drew his rapier from its sheath, and turning the point towards his heart, threw himself full upon it. And there they found him in the morning—dead, with a great pool of blood upon the floor; and in due course he was buried with his fathers. But every Christmas Eve a light is seen in the dormer window in the west wing, and a shadowy form paces the passages with a stain upon its breast. This was the tale Silas Brookes had to tell, only once, with a strange agitation and restlessness, for he had loved his master in his own strange method, and grieved for him to this day. And so, year after year, the ghost walked on Christmas Eve, though Myles Secretan would have none of it, vowing that Arundel, his ancestor, disliked home too much to make a permanent habitation of the half-ruined west wing.

#### GUNPOWDER EXPLOSIONS.

SOME few miles to the north of Agra, between the rivers Ganges and Jumna, stood, in the early part of this century, the town and fort of Hattass. The town was the centre of the dominions of an independent rajah, and was separated from the fort by a distance of less than half a mile. The town was one of great strength, and the fort was not less strong in its defences. The walls were thick and high, strengthened by several immense bastions; while ditches thirty yards wide and twenty-five deep, with five feet of water, surrounded both the town and the fort. The conduct of the rajah, Dyaram Jacoor, had given cause of apprehension to the East India government as to his designs against some of their possessions. Accordingly, in 1817 he was summoned by the Marquis of Hastings to dismantle his fortifications and disband his troops. At first he made pretence

of complying, but afterwards refused the demand. A considerable force was therefore despatched against him, under the command of Major-general Marshall. The town was first attacked. The batteries poured into it an incessant shower of bombs, shrapnell shells, and Congreve rockets. The courage of the defenders was far inferior to the strength of the fortifications, or the besiegers would have found their undertaking very difficult, if not impossible. As it was, in three or four days, before any important breach had been made, the garrison evacuated the town and took refuge in the fort. On entering the town, which they could do only by means of scaling ladders, the besiegers found the gates barricaded with stones and immense bales of cotton.

The full force of the cannonade was now directed upon the fort, the defenders returning the fire with much energy. They seemed determined to resist to the last. The British general nobly offered to guarantee the preservation of their property, if they would send their wives and children to be guarded out of the rajah's dominions. They were deaf to all his entreaties, and were resolved to face the worst. The worst soon came. A dire and unexpected calamity saved them the horrors and sufferings of a protracted siege. A large shell from one of the British mortars penetrated the great powder-magazine of the fort; a tremendous explosion was the result. The store of powder in the magazine was immense, the accumulation of many years, amounting to at least four thousand *maunds*, of eighty pounds each, or three hundred and twenty thousand pounds avoirdupois. The magazine consisted largely of stone vaults, extending far under ground. This will account for some of the phenomena, and for the distance to which the agitation of the ground extended. It is supposed that many of the garrison, with the major part of the women and children, had sought refuge in these vaults from the British shells, which were very destructive, and that many of these were entombed beneath the ruins of the building.

The English guns suddenly ceased firing, few knowing why, until the dreadful explosion almost paralysed every observer. From the narrative of an officer, we cite a few interesting particulars: 'I was on a working-party with one hundred men, and had just arrived in the tool-yard, about three hundred yards from the left of the trenches, when I was thrown flat on my face by some violent shock of the earth. Before the general shock, the earth seemed in violent convulsions. The walls surrounding the tool-yard were propelled forward from the fort and fell to the ground. Stones, bricks, pieces of wood, and, nearer the fort, bodies and limbs, were to be seen soaring in the air in all directions. For the moment, consternation and dismay were depicted in every face. When I arose, I felt much alarmed; the earth seemed still to move under me; and at first I thought something had happened to me alone; but, on looking round, I found my men, some in the attitude of prayer, and others lying down, hiding their faces with fear. Having recovered my senses, I looked towards the fort, and saw it enveloped in one dense cloud of smoke or dust, and now and then streaks of fire issuing from its battlements. In the midst of this momen-

tary alarm, there was an indistinct buzzing that the grand magazine of the enemy had been blown up. This report having reached my ears, I ran, or rather rolled, along the trenches, and was informed that their grand magazine had really been blown up by one of our shells. Again looking towards the tomb of destruction, what a sight met the eye! The smoke which arose from the ruins seemed to be a solid and substantial structure, gradually and majestically ascending to the skies, bearing on its top variegated volumes of vapour, that seemed to ride upon it. From this ascending mountain were ever and anon vomited forth sheets of vivid fire, and glittering sand fell in showers upon the spot. Through this dense but really unsubstantial mass, was to be seen the setting sun, spreading his luminous beams through the gigantic phenomenon; and the beauty of the sight was beyond human fancy to imagine. This tremendous volume of smoke seemed to rise almost perpendicularly, bearing off a little with the wind, which scarcely breathed. When it had ascended so that the sun was visible under it, the mass above changed colour, and you might trace on it the most brilliant rays of the rainbow. This continued ascending in various forms, until at last it was lost in the distance; after which every eye was directed to the destruction below; and the sight was frightful indeed. Heads, bodies, legs, arms, hands, spears, guns, muskets, planks, and colours, lay indiscriminately among the piles of ruins.

The shock was so terrible that it was distinctly felt at Meerut, a distance of one hundred and fifty miles. The interior of the fort, some four or five hundred persons, horses, and cattle of all descriptions, were destroyed; but the defences of the fort were very little injured, so that the firing on the part of the besieged was soon renewed, and kept up the remainder of the day with even greater spirit. This was a ruse, however, to cover the intended evacuation of the fort, which took place the same night. Many of the fugitives were cut down by the British; but many made good their escape, among whom was the rajah himself. The fort and the town were afterwards completely dismantled.

Many of the cities and towns on the European continent have passed through great vicissitudes. The ravages of war, pestilence, floods, and fires, have all by turns wrought great miseries, and produced untold suffering in not a few of them. The history of some has been written in blood and fire, of which in some instances traces yet remain. No one of them has suffered more, however, than the fine old city of Leyden. The sieges it had endured, the plagues which had visited it, the fires which had ravaged it, had left their scars; but the most terrible calamity which has befallen it, at least so far as its suddenness and destructive forces are concerned, is an explosion which took place on January 12, 1807. An explosion had taken place some three centuries or more before, but it was not nearly so destructive in its character as this more recent one. On the above-mentioned day, a vessel, containing two hundred and fifty barrels of gunpowder, was proceeding from Delft to Utrecht, and stopped for a while at Leyden. It was moored to a tree in the Rappenburg Canal, which passes through one of the finest streets in the city. Near it were

trading-vessels and pleasure-yachts, the crews of which were all unconscious of the deadly freight of the vessel lying near them. Just as the sun was setting, by some means which have never been determined, the entire cargo of powder exploded. A student who was passing along a street in full view of the canal witnessed the terrible catastrophe, and he was the only one who saw it and lived to relate the circumstances. 'I saw the vessel,' says he, 'torn from its moorings; a stream of fire burst from it in all directions; a thick black cloud enveloped all the surrounding parts and darkened the heavens, when a burst (explosion) louder and more dreadful than the loudest thunder instantly followed, and vibrated through the air to a great distance, burying houses and churches in one common ruin. For some moments, horror and consternation deprived every one of his recollection, but a universal exclamation followed of "O God! what is it?" Hundreds of people might have been seen rushing out of their falling houses and running along the streets, not knowing what direction to take, many falling down on their knees in the streets, persuaded that the last day was come; others supposed that they had been struck by lightning; and but few seemed to conjecture the real cause. At last, when the thick black cloud which had enveloped the city had cleared away a little, the awful truth was revealed.'

Then followed a scene of the greatest consternation and distress. Such of the inhabitants as were not seriously hurt hurried to seek their friends and assist the sufferers, while sounds of distress and sights of horror rose on every side. The destruction was terrible. Within a circle of fifteen hundred yards, or a little under a mile—that is, two hundred and fifty yards on every side from the focus of the explosion—every building was levelled, with the exception of a church spire and a large house; the latter, however, threatening every moment to fall. At a little distance beyond this line, houses were seen in every stage of demolition, some completely unroofed, some half demolished, and some wholly destroyed. Still farther from the centre, windows, shutters, and doors were demolished, and the slates and tiles were stripped from the roofs, marking the severe but diminished force of the shock. At the extreme limit of the destructive influence, the damage was mostly confined to the windows, the glass of which was uniformly shivered into fragments, which were scattered about in all directions.

Amidst this dreadful chaos of material things, there were to be seen men and women in the bitterest anguish, wringing their hands, as they sought among the blackened and mutilated corpses their partners in life or their beloved offspring; while, mingling with the cries of the bereaved rose the wails, the groans, and the appeals of the wounded, the half-buried, and the dying. The occasional fall of ruined houses and other buildings varied the catalogue of horrors and the awful chorus of misery. Children suffered very severely. In the street along which the canal runs in which the disaster occurred, were five large schools; at the time of the explosion these were crowded with scholars. To these places parents rushed to seek for absent children. Numbers of these were dug out of the ruins; some seriously injured, some

only slightly, some crushed and mangled so that it was hard to recognise them. It was a heart-rending sight to see parents digging among the ruins for their missing children, often spending their efforts for naught, or to recover a body blackened and dismembered and recognisable only by the clothes. Some of the children, as is not seldom the case in such calamities, were almost miraculously preserved. Very many of them, however, perished.

To add to the direness of the calamity, a fire broke out among the ruins, and raged so fiercely that the remaining part of the city was threatened with destruction. Happily, help was not wanting, as numbers of the inhabitants came to attempt to rescue the buried and suppress the fire. Shortly afterwards, too, people began to arrive from the country around, as the explosion had been heard at a distance of fifty miles.

As night set in, the horrors of the scene were increased. The wind rose, and the weather was tempestuous. Added to the falling of houses, the shrieks and groans of the injured, the blackness of the smoke, the roaring of the wind, and the raging of the flames, were the lamentations of those who had lost husband, or wife, or children, or friends by the explosion. Some were paralysed with astonishment and fear; others were so excited that they knew not what to do or how to act; but the majority retained their presence of mind and worked away with a will.

The Hague is not many miles from Leyden. Louis Napoleon was then king of Holland, and he was at the former place when the explosion occurred. The city was shaken as by an earthquake; and the stupendous column of flame, which rose to a great height for about thirty seconds, and was succeeded by the lurid blaze of the fire, convinced the people that something dreadful had happened. The king despatched an aide-de-camp to make inquiries. On the return of the messenger, he himself hastened to the doomed and terror-stricken city, ordering all the soldiers in the nearest garrisons to attend without arms. First setting the soldiers to work to suppress the flames and extricate the wounded, offering a reward of ten ducats for each one rescued, he next made arrangements for the reception and treatment of the injured in the neighbouring towns and in the palace, erected in a wood outside the city, which was thrown open as an asylum for the homeless. By means of fire-engines, the flames were at length suppressed; and the king returned to the Hague, to collect money to relieve the distress of the sufferers and secure their subsistence.

Order was soon restored. The inhabitants and their many helpers were divided into classes, irrespective of rank, and told off to different departments of work; and the ruins were soon removed outside the boundary of the city. The keel of the vessel which had conveyed the destructive material was found imbedded in the earth, far from the canal; the anchor was found in a field outside the city; and a large piece of lead had been projected into a distant street.

The explosion overthrew more than two hundred houses and other buildings, and seriously damaged six hundred more. Three hundred people were killed, and two thousand more wounded. Among the former were two professors at the university; and among the latter

one professor, who afterwards died from the injuries he had received.

Contributions for the relief of the sufferers poured in from all parts of Holland; and though the English were at war with the Dutch, a subscription list was opened in London for the assistance of the Leydeners, which realised several thousand pounds. They were efficiently helped, also, in other ways.

The Dutch government undertook the city debts, exempted the citizens from the payment of certain taxes for a number of years, and extended the privileges and honours of the university. Thus encouraged, the Leydeners soon rebuilt their city; and it was not long before prosperity rewarded their endeavours, and helped to efface the marks of their suffering and loss.

## THE OLD WAY AND THE NEW.

A STORY IN NINE CHAPTERS.

By T. W. SPEIGHT.

### CHAPTER V.

Six months had come and gone since Grandad's birthday, during which time a startling change had come over the spirit of Matthew Roding's dream. How this change, which affected not him alone but thousands of others, first began to make itself felt, no one seemed to know. Little fitful puffs of air that came and went quickly, seeming to emanate now from one point of the compass and now from another, but which, to the eyes of experienced mariners, betokened worse to follow, began to ruffle and flutter the sunny waters of speculation. Then the sky became slowly overcast and the wind of rumour began to blow, moaning and whispering ominously among the rigging of the hundreds of fair argosies which not long ago had left port laden with golden hopes. Of these, some took alarm at once, and ran for the nearest shelter; while others, confident in their seaworthiness, only clapped on more sail and stood boldly on their course.

Then, one morning, came a thunderclap that startled everybody. One of the most widely known firms in the City—a house which had withstood many a storm in years gone by, and against whose stability not a word had ever been whispered—had failed suddenly and without warning, with liabilities estimated at upwards of a million of pounds, and—which seems an almost inevitable corollary in such cases—had brought down several lesser houses in its fall. Then, indeed, the tornado burst in all its fury. One of those periods of wild and unreasoning panic set in, when men walk about as if afraid of their own shadows, and each one regards his fellows with an eye of suspicion. It was a time of disaster and ruin to thousands, to be talked of with bated breath in years to come.

It was scarcely to be expected that Matthew Roding's shallow bark, steered though it was with consummate skill, should escape unscathed when so many nobler craft had foundered in open sea.

It had indeed been sorely buffeted, and although nearly everything had 'gone by the board,' it still contrived to keep afloat, and Matthew stuck manfully to the helm. There were times when he was not without hopes of ultimately weathering the storm; but there were other times when despair weighed heavily on his heart, and he felt like a man waging a hopeless fight against destiny.

The ten thousand pounds with which he had made a second start in life less than three years ago, which was to have been merely the foundation of the colossal fortune he intended to build up, had, together with a few other thousands, the result of some of his earlier and more cautious ventures, been gradually but surely swallowed up by the insatiable quicksands among whose fatal mazes, in the mad race for gold, he had rashly ventured. For, if Matthew Roding had been the means of other people losing their money, he had lost his own as well; if, through his representations, they had pinned their faith to certain speculations which in the end had turned out to be little better than gigantic swindles, he had pinned his own faith in the same place for every one to see. He had, in fact, been outwitted, and made a cat's-paw of, by men far keener and more unscrupulous than himself—men who, in the wild scramble for wealth, had everything to hope for, and neither fortune nor reputation to lose.

At Chesterfield Villa, meanwhile, everything, to all outward appearance, was going as merrily as a marriage bell. True it is that there was a great scarcity of ready-money in the establishment, and that the tradespeople were on the eve of revolt; but of that the guests who ate Matthew Roding's excellent dinners or crowded his wife's drawing-room knew nothing. Indeed, if they had been aware of the fact, they would not have cared one iota so long as the hospitable doors remained open to them; and it may be that more than one of them were in a like predicament themselves.

For some time past, Mrs Roding had not been without her suspicions that all was not so well with regard to her husband's affairs as appeared on the surface, and, to do her justice, she had more than once hinted, in terms as strong as she dared use to him, that she would willingly retrench her expenditure if he wished her to do so. But of this Matthew would not hear. He pooh-poohed her half-implied fears, and told her that if she would only attend to the matters which concerned her, he knew how to attend to those which concerned him. The truth was that he could not afford to make a less show in the eyes of the world than he had hitherto done. It would never do to let people suspect on what a sandy foundation his prosperity was built; confidence must be maintained at any and every cost. He was like a runner who has entered himself for a race in which he has staked all he holds in the world. Come what may, the pace must be kept up, even though he should drop dead at the winning-post.

Whether Mrs Roding were convinced or not, she made-believe to be so, and plunged more deeply still into that whirlpool of so-called 'pleasure' in which so many people contrive to drown

their cares by day, only to have the ghosts of them, in yet more fearful guise, haunt their pillows by night.

Through the influence of Lady Pengelly, Mrs Roding had been 'taken up' by certain fashionable or semi-fashionable people at the West End; but the experience had not proved altogether such a blissful one as she had anticipated. At Tulse Hill she was a personage of some importance, whereas in the drawing-rooms of Belgravia she found herself to be little better than a nonentity. Now, Mrs Roding was of that frame of mind which does not like to be looked upon as a nonentity anywhere, and, after several mortifying experiences, she came to the conclusion that it is better to reign among your own tribe, however insignificant that tribe may be in the estimation of the world in general, than to live at Rome and be a nobody. One advantage, of which we may be sure she duly availed herself, had accrued to Mrs Roding from her brief contact with the *fine fleur* of Society: she was in a position to excite the envy—not to speak of feelings still more uncharitable—of all her 'dear' friends and acquaintances by favouring them with a full, true, and particular account of her adventures in fairyland—how Lord Pengelly took her in to dinner on two occasions; how she had driven in the Row with her Ladyship, and had had all the celebrities of the day pointed out to her; how she had been to the Countess of Clandooley's garden-party, and what a sweet, amiable creature her daughter, the Lady Grace, was. And so on—and so on; with an ever-present undercurrent of wonder that people of rank and fashion should dress so plainly, and talk so informally, and be altogether so little different from the 'common herd.' Like the conjurer's famous bottle, the topic seemed an inexhaustible one, and it was inexpressibly soothing to her feelings to be able to dilate on it to her heart's content.

Grandad was as hale and hearty as ever, leading his customary quiet and uneventful life, to all appearance heeding nobody, and heeded by none—Mary and Freddy always excepted. He read his newspaper, and played on his fiddle, and smoked countless meditative pipes in the garden, and had surreptitious interviews with Bunker two or three times a month, the latter having been duly reinstated in his former position with the firm. Now and again, he penetrated as far north as Bloomsbury, and looked in for an hour or two at his grandson's studio, where he enjoyed the society of the young fellows who were in the habit of dropping in there of an afternoon. Of his son, he nowadays saw less and less. It almost seemed as if Matthew avoided him of set purpose, but of this Grandad spoke no word to any one. When Matthew and he were together, their conversation, as if by mutual consent, was confined to outside topics; but whether one week or three had elapsed since they saw each other last, Grandad seemed never to call to mind.

Mrs Roding's scheme for banishing Grandad from his son's roof had for the present fallen into abeyance. For one thing, her recent raid into fashionable life had occupied so much of her time and thoughts, that many minor matters—of which this was one—had of necessity been laid aside for the time being; but she had by no

means abandoned her project or given it up as hopeless.

The breach between Ruff and his father stood just the same as it had done for so long a time past. For any mention Matthew ever made of his son, there might have been no such person as the latter in existence. In the eyes of the father, the son had, if not exactly disgraced himself, proved himself unworthy of further recognition or consideration by the mode of life he had deliberately adopted; for in all matters connected with art, in whatever form it might find its outcome, Matthew Roding was a thorough-going Philistine. He would buy pictures to hang on his walls because it was the correct thing to do; but for the man who painted them he had only a sort of pitying contempt; and that a son of his should sink so low as to choose of his own free-will to earn a living by daubing canvases, seemed to him nothing less than monstrous.

Ruff Roding had told Mary Nunnely, in his impetuous way, that, now he felt his feet firmly planted on the ladder he meant to climb, he had made up his mind they should be married in six months' time; and he would have carried out his intention, despite his father and every one, had not Grandad, when spoken to on the subject, dumfounded him by saying: 'If I were you, lad, I wouldn't do anything rashly. You've plenty of time before you; better bide awhile.'

This rebuff, coming from a quarter whence he least expected it—for Grandad had been in the confidence of Mary and himself all along—took the young painter considerably aback.

'But why wait, Grandad?' he queried, a little hotly. 'I've put away a bit of money, as you know; and as soon as the picture I'm now at work on is finished, there will be a lump more to add to it. Mary and I only intend to begin housekeeping in a very humble way. Dear girl! I believe she would be happy with any one she cared for in a cottage at ten pounds a year. And then, when I have the responsibility of a wife and a home resting on my shoulders, it will nerve me on to work still harder than I do now; and I've often heard you say what a fine thing plenty of hard work is for a young fellow. Then there's another point which, now that we are on the subject, I may as well mention—although Mary and I agreed to keep it a secret till the wedding came off—and that is this: when Mary and I are man and wife, we want our dear old Grandad to come and live with us. Although he never says a word about it, we know that he can't be happy where he is now, and we have the audacity to think he would be so with us. At anyrate, it wouldn't be the fault of the two people in the world who love him best, if he were not. So now, Grandad, why should we bide awhile? Why not get married "right away," as the Americans say, and have done with it?'

Grandad's face worked strangely for a moment or two before he answered. 'You young folk are always in such a desperate hurry about everything,' he said; 'but when you are in love, as you call it, I suppose allowances must be made. Tell me, now, has Mary said anything to you about a certain promise I made her six months ago?'

'Not a word. I never knew you had made

her a promise of any kind,' said Ruff, with wide-open eyes.

'I hardly supposed she would tell you, but one can never be sure what these kittenish creatures will or won't do. However, now that I have mentioned it, I suppose you will give the girl no peace till you have wormed it out of her, unless I tell you first. What I promised was this: that before, or by the end of this year you should be reconciled to your father, and that he should give his consent to your marriage with Mary. Was I wrong, then, in asking you to have patience and wait awhile?'

Ruff sat staring at Grandad for a little time, as if bereft of the power of speech: then he drew a long breath, and said: 'And you promised all that! Is the age of miracles, then, not yet over?'

The old man's only answer was a sort of inward chuckle. Then the two charged and lighted their pipes with as much solemnity as though engaged in some sacrificial rite, and puffed away in silence for some minutes.

Ruff was on the tender-hooks of curiosity; but he knew something of Grandad's peculiarities, and that he was not a man who cared to be closely questioned.

In a little while Grandad knocked the ashes out of his pipe and rose to go. Then, laying a hand on his grandson's shoulder and looking him straight in the eyes, he said, in almost the very words he had used to Mary: 'Have no fear. That which I promise I can perform.' And that was the only satisfaction the young man could obtain.

On a certain October evening, Matthew Roding reached home in a hansom cab somewhere between nine and ten o'clock. It was one of those evenings on which his wife held one of her 'small and early' gatherings. Mrs Roding's parties were very popular, and were always numerously attended. Lights shone in nearly every window, and a lady, with a very shrill soprano voice, was tearing the last popular ballad to tatters, to the accompaniment of a violin and piano, as Matthew's cab drew up at the door. Gaity of any kind, or even the mere semblance of it, was as far from his mood this evening as light is from darkness. He had spent an extremely harassing day in the City, and his sole desire just now was to escape unnoticed to his own room and there shut himself up from every one. On his way home, he had been revolving in his mind a certain train of circumstances which had occupied much of his thoughts during the last few weeks. What Bunker had told Grandad on the latter's birthday respecting certain information which had come to his ears of Matthew's intention to dispose of the business at Bankside, had proved to be founded on fact. The business had fallen off fully one-third since it had come into Matthew's hands, and his intention had been to work it up afresh as far as possible, and then to dispose of it to the highest bidder. But the Fates had proved unkind. Affairs of late had gone so much awry with him, that, in order to enable him to meet certain pressing liabilities, he had found himself compelled to put the Bankside business into the market without delay. The firm was one of long standing, and the business, or as much of it

as was left, being found to be sound at core, a customer soon presented himself. Everything went on satisfactorily, and the negotiations were all but completed, when suddenly the customer that was to have been, drew back, and refused to proceed a step further in the matter; in addition to which, he absolutely declined to assign any reason for his sudden and unaccountable change of front. There was nothing for it but to put up the business a second time, which was accordingly done, and before long a second would-be customer presented himself. But again at the last moment the affair fell through, precisely as the first one had done; nor in this case, any more than the other, was any explanation forthcoming. Matthew Roding was confounded; he felt as if he were being made the sport of some malignant sprite, who was slowly but surely hounding him onward to his doom. It may be that Grandad might have been able to furnish him with a solution of the mystery, had Matthew taken him into his confidence, but that was the last thing he thought of doing. The money he had looked forward to obtaining from the sale was of the utmost importance to him; he had counted upon it as a certainty; the lack of it would increase his difficulties tenfold. Ruin, and not merely ruin, but disgrace, loomed imminently before him. The iron courage which had hitherto sustained him was beginning to give way at last.

After letting himself into the house by means of his latchkey, he beckoned to the page who was standing in the hall. 'Don't let any one know that I am at home,' he said; 'I have letters to write, and must not be disturbed.'

There was a back staircase for the servants' use leading to the upper floors, and of this Matthew now availed himself. The music came to him in fitful bursts when some distant door was opened for a moment. What a ghastly mockery it sounded to him, knowing how close he stood to the brink of ruin! Were all his toilings and strivings, if they had proved successful, to have had for their end and aim no other object than this?—that his wife should be able to array herself like a peacock, and to 'entertain,' with a degree of lavish profusion which would cause every one there to envy her, a number of people for whom she cared nothing, and who cared nothing for her in return. 'A noble ambition, truly!' muttered Matthew to himself with a sneer. And yet he could count as many men as he had fingers, all known to him, whose ambition seemed never to soar any higher than that.

On his way to his 'den,' he had to pass his child's bedroom. The door was half open, and seeing a light and hearing voices, he looked in. Mary and Freddy were its sole occupants, the latter robed in his nightgown, just ready to be popped into bed. It was past his usual hour, but he had been to a children's party and had not long reached home.

'Papa, papa!' he cried, clapping his hands gleefully as soon as his father's head was protruded through the doorway, 'do tum in and hear me say my prayers. Mamma never will hear me; she's always so vewy, vewy busy; but you'll hear me to-night, won't you? I never forget to say "God bweess papa."—Do I, Maw?'—

He ran to his father, his little white feet gleaming like marble on the dark carpet, and drew

him into the room. Matthew sat down, controlled thereto by some impulse, which he was powerless to resist. Then the child knelt beside him, and placed his little palms together and said his simple prayers. The hard, worldly man was moved as he had not been moved for years. When the child had said his last 'Amen,' he snatched him up in his arms, imprinted half-a-dozen kisses on his eyes, his cheeks, and his lips, and then setting him down, left the room quickly without a word.

The strains of a waltz floated to his ears as he passed on to his room; the dancers below were footing it merrily; an icy wind seemed to chill him to the marrow as he paused for a moment at the head of the stairs, unknowing what he did, to listen.

### HOUSEWIVES' WISDOM.

Nor very long ago, the present writer was visiting a friend at his suburban residence, and while sitting in the open air on a kind of balcony which ran behind the house at the head of the garden, his attention was called to the great number of smuts—or, as they are called in London, 'blacks'—which rolled about in flocks upon the stone floor of the balcony with every breath of wind. To compare small things with great, they resembled a vast herd of buffaloes dotting the extensive plain of the floor, and wandering in droves and herds upon its even surface. To my friend's housekeeper, their appearance suggested an idea of a different sort. 'I think we shall have a storm,' she said, 'there are so many smuts about.'

'Very likely,' thought the writer, 'though I do not see the connection.'

The day, however, was sultry and close; a gray yellowish haze obscured the sky, and there was very little breeze stirring. It looked, in short, as if we were about to have a thunderstorm; the heavens were ominous of it; and one seemed to feel the oppressiveness of an atmosphere overcharged with electricity.

On thinking the matter over, an explanation of the housewife's remark suggested itself. The recent experiments of Dr Oliver J. Lodge have shown that smoke is rapidly condensed in air which is highly charged with electricity, and this fact might very well account for the falling soot. Dr Lodge fills a bell jar full of dense fumes from burning turpentine, and in a few minutes causes it to deposit in flakes of soot upon the sides and bottom of the jar by simply passing the discharge from an electrical machine through it. The method has been practically applied to the condensation of lead-fumes in Wales; and the explanation of its efficacy is, that the particles of smoke becoming electrified, accumulate upon the sides of the vessel. The same action may take place on a larger scale in the atmosphere when charged with electricity; and hence the unusual falling of 'blacks' when 'thunder is in the air.'

There are probably many sayings and practices of common life which can in this way be traced to a scientific source; and an interesting chapter on old wives' wisdom might perhaps be written. On this occasion, however, we shall only refer to one or two other instances which come to mind. The first of these is also of an electrical nature, and concerns the curious custom of drawing the blinds of a room down on the approach of a thunderstorm, and removing the looking-glass from its place on the toilet-table before the window, to place it face downwards on the bed. This is a very old practice, done by rote, and usually without any understanding of the reasons for it on the part of those who do it. The object, of course, is to guard against being struck by lightning; and the hidden reasons are in all probability the following: The blind is drawn down to keep out the flash, which is at least of a startling character, and may even be so powerful as to injure the eyesight; the looking-glass being coated with a metallic amalgam of mercury, exposing a conductor in the path of the electric discharge to the 'earth,' is calculated to draw the lightning. When it is taken from the window and placed face downwards on the bed, it is, in fact, very well insulated; for the thick layer of woollen blankets on which it is laid, and the glass face, tend to isolate it electrically from the floor or the walls, which may be regarded as parts of the 'earth.' The prone position of the metallic surface is also less likely to draw the lightning discharge downwards than when the mirror is placed vertically, because there is then a shorter length of conductor in a vertical direction.

Another superstition of the household, if it can be called such, is to place the poker in front of a fire which is burning low, in order to quicken and make it burn up. The poker is leaned against the ribs with its head on the hearth, and its point inclined over the top bar of the grate. In spite of much scientific scepticism, housewives as a rule believe in the efficacy of this device for making the fire 'draw'; and we think they are very likely right, as we shall attempt to show. The poker, passing as it does in front of the grate and leaning against the bars, gets warmed up, and conducts heat from the front of the grate to its point, which is situated in the air above the fire. Now, the warm point of the poker must rarefy this air to some extent, thereby causing a greater draught from below and up the chimney. The increased draught causes the fire to burn more briskly, the poker gets warmer and the draught intensified until the fire is blazing brightly.

The habit of covering the front of a fire with a sheet of paper in order to kindle it up, is also traceable to the increased draught caused through the fire itself from below; but it is neither so puzzling nor so scientific as the artifice of the poker.

Talking of fires, one often hears it said that the 'sun has put the fire out,' and verily the blackened coals and gray ashes often seem to testify to the assertion. But why should the sun's rays extinguish a fire, as if the solar orb were jealous of the lesser luminary? For this reason, perhaps, that the sunbeams warm and rarefy the air around the fire, thereby producing conditions unfavourable to the energetic combustion of the coal. The oxidation of the carbon by the carbon is dimin-

ished in the rarer atmosphere and the feebler draught. The fire, therefore, gradually languishes and goes out.

#### THE CURSE OF GOLD.

There is a singular superstition in the mining districts of America that the discoverers of hidden treasures in the bowels of the earth are sure to meet with a violent end. Many instances are from time to time adduced in support of the statement, and go far to show that numbers of adventurers literally die in their shoes. The original proprietors of close on forty successful mines have been accounted for in this way. Twelve were shot, three were engulfed, while the rest disappeared in the cities of Dakota and New Mexico, and were never heard of afterwards. George H. Fryer, from whom the Fryer Hill Mine had its name, committed suicide in Denver. Two years before his death, he possessed one million dollars; the expenses of his funeral had to be paid by the authorities. The discoverer of the Standard Mine in California was swallowed up by an avalanche. Colonel Storey, another wealthy miner, was killed by the Pyramid Indians. William Fairweather, who brought to light the hidden treasures of Alder Gulch, came to his death by drinking and riotous living. A yet more terrible end had William Farrell in a hospital at San Francisco. He had discovered the rich mine at Meadow Lake; but hundreds of deceived gold-seekers surrounded his bed, 'gnashing and grinning so horribly that he could not die.' The owner of the Homestake Mine became a highwayman; one day he attacked a mailcoach, but the attendants shot him dead. John Homer of the Homer Mine spent his last cent, and then put a bullet through his brain. 'Doughnut Bill,' 'Old Eureka,' 'Ninemile Clarke,' died literally in their shoes, being killed in saloon scuffles. Montana Plummer, who discovered one of the richest mines in the world, and was sheriff for a time, died on the gallows.

#### 'HOPE.'

A SONNET ON THE PICTURE BY G. F. WATTS, R.A.

THOU sittest blindfold on a world of woe;  
Around, the powers of darkness still hold sway;  
Yet thy pale cheek is lit by one soft ray,  
And from thy broken lyre sweet echoes flow.  
Thy head is bowed with disappointment, so  
Thou canst not chase the shadows quite away;  
But o'er thy head there breaks God's glorious day,  
How bright, thy darkened eyes can never know.  
Around thee, chaos; and beneath, despair,  
Whose surging waters leap up to thy feet.  
They cannot whelm thee, howsoever they beat.  
Patient and calmly still thou sittest there;  
Thy smile has power to cheer a world's distress;  
Thou art immortal in thy loveliness!

## THE POUND STERLING.

SINCE we endeavoured to show what is Bi-metallism, the great Silver Question has continued to be discussed by some few who understand it, and by a great many who do not. A Royal Commission has been appointed, and is still pursuing its investigations, but has yet made no Report, while the volume of evidence it has so far published does not throw much additional light upon the subject. The problem to be solved is, how far has the depreciation of silver affected the purchasing power of gold and thus depressed prices? How far has the appreciation of gold affected the depreciation of silver? And is the restoration of silver to the position of an alternative standard of value with gold practicable and desirable? We are not going to discuss any of the branches of the problem here; but it may help our readers to a better understanding of its conditions, if we present some facts in the history of the Pound Sterling.

Ricardo, the great political economist, said that 'commodities measure the value of money, as money measures the value of commodities.' But, as commonly understood, money is the vehicle employed by communities for exchanging values; that is to say, it is in use not for its intrinsic value, but as a standard of value. It may have an intrinsic value, as we have seen before in the case of gold, but the intrinsic value is not necessarily the result of its employment as money. Bank-notes and promissory-notes—in other words, paper currency—express value, and are used to exchange values, but are not in themselves intrinsically valuable. The monetary system of a nation exists for the purpose of maintaining an acknowledged standard of value, and hence it becomes a matter of State importance and control. According to the law of England, by statute enacted in 1816, gold is the sole legal standard of value in this country. The Pound Sterling is the unit of value, and the Pound Sterling means now the sovereign of 123·27447 grains troy. The Mint price of gold fixed by law is £3, 17s. 10½d. per

ounce. Silver and copper coins are only tokens; that is to say, they may not be legally used to discharge debts above a small amount.

Mints are said to have been in existence before the time of Athelstan. At anyrate, in his reign (928) regulations were issued for the government of the Mint in London and of several provincial mints under its control. In the time of Edward I., the Mint was managed by Italians, as Englishmen do not seem to have then acquired the art of coining; and in the reign of Edward III., the operators were formed into a corporation by royal charter. It was in this reign that gold was first taken to the Mint for coinage; but of course gold coin was in use long before that. The Romans had gold coins two centuries before the Christian era; and it is possible that the Macedonians, three centuries earlier, also used gold. The Anglo-Saxons, however, only coined silver; and the first record of gold coins struck in England occurs in 1257.

Sovereigns were first minted in 1489, and guineas in 1663. The name of the latter coin was given because the gold from which it was made was brought by some African merchants from the coast of Guinea. When first struck, the guinea was value for twenty shillings; but by 1695 it had become value for thirty shillings. After that, it was reduced at different times, until, in 1717, it became as now understood, equivalent to twenty-one shillings. It is interesting to note that the first guineas bore the impression of an elephant, in token, doubtless, of their African origin. These coins, as they became scarce, rose again in nominal value—so much so, that in 1811 an Act was passed prohibiting their exportation, and also their sale at a higher price than twenty-one shillings. In 1817, sovereigns were again coined, and the issue of guineas was discontinued, and has never been resumed.

It is asserted by economists that the purchasing value of the sovereign increased about twenty-five per cent. between 1875 and 1885—that is to say, that in the latter year it was able to purchase as much as was obtainable for twenty-five shillings

in the former year. Other calculations show that within the last fifteen years the purchasing power of the sovereign has increased from twenty shillings to thirty shillings. This is what is meant by the 'appreciation of gold,' taking money in Ricardo's sense as the measure of value of commodities, and itself measured by commodities. The depreciation of prices and the appreciation of gold as the standard of value thus mean the same thing.

Now, the origin of the Pound Sterling was in this way. In the days of William the Conqueror, the management of the currency was in the hands of the Jews, who thoroughly understood the principles of money. They took a certain quantity of silver, of a weight known as the 'Tower pound,' which was something between a Roman pound and a pound troy. This was the standard of measurement, the unit of value. Out of this pound of silver were cut twenty separate coins, called shillings. Out of a shilling were then cut twelve separate coins, called pennies. The weight of the silver penny was a pennyweight—the two hundred and fortieth part of a 'Tower pound;' and this was the actual coin in circulation, for shillings were only nominally coined. These silver pennies weighed each one-twentieth part of an ounce, and in modern money would be worth about twopence-halfpenny each.

Previous to 1216, rents were paid mostly in kind, and in fact money was not to be found among the masses of the people at all. But in that year coin was made 'Sterling'—a word supposed by some to be derived from 'Easterling,' the name given to German traders in England noted for the pure quality of their money. Camden says: 'In the time of King Richard I., monie coined in the east parts of Germanie began to be of especial request in England for puritie thereof, and was called *Easterling* monie, as all the inhabitants of those parts were called *Easterlings*; and shortly after, some of the countre skillfull in mint matters and alloys were sent into this realme to bring the coin to perfection; which since that time was called of them *Sterling*, for *Easterling*.' In Holinshed, we read that 'certain merchants of Norwaie, Denmarke, and of others those parties, called Ostomanni, or, as in our vulgar language we terme them, *Easterlings*, because they lie east in respect of us.'

The term Sterling was applied to what was called the 'money of account'—that is to say, to the pound computed as equivalent to twenty shillings, and the shilling as equivalent to twelve pence. Practically, the word 'Sterling' meant genuine and lawful, or, more properly speaking, legalised money.

The system thus introduced by the German Jews was in vogue down to the reign of Edward I., who banished the Jews from England. Their place as money merchants was taken by Italians; and Italians, as we have seen, were in charge of the coining operations at the Mint. The change is held by many not to have been one to our

advantage; at anyrate, the Italians are blamed for disordering and debasing the currency.

So far it will be seen that English Sterling money—the standard of value—was silver, and that the unit was the Tower pound-weight of that metal. A shilling was the twentieth, and a penny the two hundred and fortieth, part of the unit—and the nominal value of the coins corresponded with the real value. The Italians introduced gold for coinage purposes, and the whole system had to be altered. In or about 1300, the Pound Sterling ceased to be a pound-weight of silver; for the Tower pound, instead of being divided into twenty parts, called shillings, or two hundred and forty parts, called pennies, was divided into thirty or forty parts, still called shillings, although twenty shillings was still called a Pound Sterling. After this, money was measured by *tale*—that is, by the number of pieces—and not by weight. A Pound Sterling was no longer a pound-weight of sterling silver; and in subsequent reigns the metal itself was debased by the mixture of alloys, so as to increase the circulating medium at the expense of the people.

There was, of course, at first no standard for the new gold coinage introduced by the Italians, and gold coins had to be estimated in silver. The ratio was constantly changing; and it was not until 1717 that it was fixed by law. Then, by the advice of Sir Isaac Newton, the guinea was decreed to be equivalent to twenty-one silver shillings, on the assumption that in the open market the gold in a guinea would exchange for the silver in twenty-one shillings. Silver, however, was still the standard of value; and gold, as it will be seen, had to take its valuation from the quantity of silver it would purchase. In time, the position was reversed, and gold became the standard by which everything, including silver, was measured. A Pound Sterling is now the sovereign, weighing, as we have said, 123·27447 grains troy of gold of a certain 'standard fineness'—which means twenty-two parts of pure gold to two of alloy.

The fixing of the guinea as a twenty-one shilling piece has given rise to a great deal of controversy, especially in later times, when the currency question has been so hotly debated. It was expressly stated in the royal proclamation that it was because of the over-valuation of gold, which 'has been a great cause of carrying out and lessening the species of the silver coins, which is highly prejudicial to the trade of this kingdom.' But the silver pound may be said to have co-existed with the gold pound until about the beginning of the present century, when it was enacted that silver coins should not be legal tender for debts exceeding forty shillings. This was Lord Liverpool's scheme, and besides reducing the legal tender power of silver, it also established gold as the sole unit of value.

The Pound Sterling, which, as we have seen, was a pound-weight of pure silver, is now represented by a gold coin whose value is fixed by law at the rate of £3, 17s. 10½d. per ounce of gold bullion. A pound-note, which is the paper form of currency of the Pound Sterling, is founded not upon a pound-weight of silver or an equivalent weight in gold, but upon the gold sovereign, in which it is redeemable on demand. Stated

otherwise, it may be said that the Pound Sterling, which was formerly an actual tangible thing, is now a mere figure of speech. But none of us object to the unlimited repetition of its expression!

## RICHARD CABLE,

## THE LIGHTSHIPMAN.

## CHAPTER LVI.—A LAST TRIAL.

JOSEPHINE sat on a bench behind the *Maggie* with little Bessie in her arms, looking out seaward. There was a good deal of cloud in the sky, but torn, with intervals of sky, through which the sun poured a rain of white light over the water. Seen from the great height of the cliffs, the Atlantic looked like a silvery-gray, quivering sheet of satin, with folds of gray, and flashes and flakes and furls of brilliant white. About the headland of Pentargon, or King Arthur's Head, the breakers tossed, and the water was converted into milk. In the bay, under the cliffs, the gulls were noisy, and their voices, in laughter or oburgation, were re-echoed by the black precipices, multiplied and magnified, till, looking on, one wondered that so much and such strange sound should come from the flying flakes of white that glanced here and there. The wind was from the west; it had not brushed land since it left Labrador; but it had lost its chill and harshness in passing over these endless tracts of ocean; though it blew so strongly that it lifted and would have carried away an unsecured hat, there was a warmth and mellowness in it that divested it of all severity. It was like the reproof of a mother, charged with love and working betterment.

The horizon was full of change and mystery, now dark as a mourning-ribbon, now clear and white as that of a bride; now it was a broad belt, then a single thread; now melting into the sky, then sharp against it. Far away, it was blotted out by a blur of falling rain, or shadow from a cloud; and here again by a veil of sunlight that was let down between the clouds, hiding all behind.

The air was full of music—the roar of the sea, in varied pulsations, and the pipe and flute among the grass and seabent on the down, and the hiss of the sand-grains that were caught and turned over and rolled along in the bare patches. Near the extreme verge of the precipice, where the soil was crumbly, and a false step would plunge into destruction, the sheep were lying at ease, dozing, waking now and then, and approaching the sweet grass to nibble, then going back to the edge of the precipice to sleep again; for the sheep have ascertained that, with a wind on shore, the edge of the cliff is the most sheltered spot; the wind hurling itself against the crag, is beaten upwards and curls over, and falls farther inland, just as might a wave. Consequently, in a heavy gale, partial stillness of air is found at the cliff edge.

Josephine wore a dark-blue dress, and over her head was a handkerchief, pinned beneath her chin. Bessie lay, silent in her lap, with her head on Josephine's bosom, and her thin-drawn face looking seaward. Josephine also was silent; she also was looking seaward. Her face was

greatly changed since we first saw her on the lightship. Then she was girlish, with mischief and defiance in her splendid eyes, and life glowing in her veins, showing through her olive skin. Then, there was promise in her of a handsome woman, full of spirit and self-will; of a clever woman, who could keep a circle of men about her, charmed, yet wincing, at her wit and humour. But the Josephine who sat on the bench of the *Maggie* was not the same. The promise was unfulfilled. The girlishness was gone. The self-confidence had made way for timidity; the defiance in her great dark eyes was exchanged for appeal. There was no mischief more lurking anywhere, in the eyes, in the dimples of the cheek, in the curve of the lips; but there was an amount of nobleness, and mixed with gentleness, great resolution, marked in all the features. It was like the nature of that west wind that they inhaled—strong yet tender, direct yet infinitely soft, soothing, healing, loving, strengthening—and pure.

Josephine had gone through a long ordeal, to which she had subjected herself, and from which there seemed no issue. Spiritually, morally, it had done her good; but it had not advanced her towards that end which she sought—at least so it seemed to her. She was no nearer to Richard Cable than she had been. If he conferred on her a boon, it was in such a manner as to rob it of all the grace of a gift and of all the hope it might carry.

What a fascination there is in looking at the sea! Even the most vulgar soul is affected by it. On the sea-border we are on the frontier of the infinite. The sight of the ocean is like the sound of music calling forth the soul from the thoughts of to-day, from its cage-life to freedom, and an unutterable yearning after what is not—the Perfect. At the sight of the sea, all the aspirations long down-trodden, long forgotten, lift up their hands again, and stretch out of the dust of sordid life. All the sorrows of the past, scarred over, break out and bleed again, the blood running down drop by drop, warm, soothing, yet painful. All the generous thoughts that have been pared down and disfigured into mean acts, shake off their disguise, reassume their original dignity, and master us. All the unrealities, the affectations, which have bound us about, break away, and we stand forth fresh and natural and true. All the selfishness, the contraction of interest to one miserable point, discovers its unworthiness, and the heart swells with a charity that has no bounds.

I have seen those who have taken novels out on the downs to read, sit hour by hour looking seaward, with the novel unread on the lap. The sea was the great reality, the infinite truth waking up in their minds a thousand thoughts and emotions, drawing them out, withering the base, and bracing the true. It showed them in their own selves all the elements of the noblest romance; it revealed to them the true hero or heroine, in themselves, in the ideal, towards which they should ever strive, and in the pursuit of which work out the grandest of romances, which is not a romance, but a great reality.

So Josephine sat looking seaward, and thinking without knowing that she thought, and on her lap lay little Bessie thinking, as her eyes looked

seaward, and not knowing that she was thinking. In Goethe's ballad the Erling calls to the child, uttering promises; and the father who bears the child does not hear the voice, and shudders at the thought that his child may be lured away. The sea—the infinite sea, called to the child and to her who held the child with a voice that both heard—a voice full of promise, but full of mystery as to what it promised.

The bench on which Josephine sat was made of old wreck-timber, and at the sides stood the curved ribs of a ship or boat, meeting overhead, and boarded in, so as to form a rude arbour. The sides cut off the wind, when it did not blow directly on shore, and the seat was a meeting-place for the coastguard. As Josephine sat here, a man came round the corner of the house and approached the place where she sat. She did not see him because of the planks that framed in the seat. Five minutes after, another man appeared in like manner round the other angle of the house, and came towards her arbour, and he also was unseen as he drew nigh, for the same reason. The first who came was Richard Cable, and he came to see Bessie. As already said, he had not been to the *Maggie* since she had been there; but of late a great uneasiness had come over him. He remembered what his mother had said, as he moved to Red Windows—that he laid his foundations in his first-born, and set up the gates in his youngest. In his troubled mind the fancy rose that he had lost his first-born—her love, at least, by thwarting her, and ruined her happiness; and that he was about to lose his poor little Bessie in another way. He had struggled against this impression, against his desire to see her, how she was progressing, to assure himself that the fear that weighed on him was unfounded. At length he had ridden over; and having heard from Mrs Corye that Josephine was with the child on the bench, he went in search of her; very reluctant to meet Josephine, and very desirous to see his child. He stood screened by the side of the bench, gray wooden wreck-timber planks, carved over with initials, listening for Bessie's voice, waiting for her to run out on the down, when he would go after her, catch her up in his arms, and carry her off, without having to face Josephine.

At first he doubted whether those he sought were there; but there was a round knot-hole in one of the planks, and on looking through that, he saw Josephine, and the little girl leaning on her bosom. Josephine's profile was clean cut against the sky, noble, fine, and beautiful; but he could not see from that silhouette how changed the face was. As he thus stood, now looking through the hole at Josephine and Bessie, then, caught by the fascination of the sea, looking out seaward, losing himself in dreams full of trouble and pain and froth and brine, there passed a flicker of sunlight over the rolling ocean, like a skein of floss-silk of the purest white blown along the gray surface, and caught and spread by the inequalities, and then lifted and carried on again by the wind. He looked at this till it disappeared, and as he looked, his sense of time passed away, and he knew not how long he had been standing there, unable to muster courage to present himself before those who sat so near him and yet were parted from him. As he thus

stood, leaning back against the wall, another man came round the house, from the opposite side, and ensconced himself on the other side of the arbour. This was Mr Cornellis. He had driven up to the *Maggie* five minutes after the arrival of Cable, and had inquired for Josephine, not by name, but as 'the young person staying here with one of Cable's children.' He had been to St Kerian, and had there learned where she was and what she was doing; and had come on to the *Maggie* after her. But, as he had heard from Mrs Corye that Richard had himself gone in the same direction a few minutes before, he contented himself with slipping round the corner and planting himself beside the bench, screened by the side, where he thought he might stand unobserved and hear what took place before he showed himself.

So Josephine sat on the old bench with the ribs of a wreck arching over her, planked in on both sides, and the sick child on her lap, both silent, both lost in a day-dream; and on each side of her, unknown to her, stood a man with whom she was intimately allied, and yet from both of whom she was widely parted—her father and her husband. She knew nothing of their proximity; she had not heard their steps on the turf; and the wind that blew into the arbour, filled it and whirled about in it, and hummed and piped and broke out into song, and sank into sobs, and pulled at the timbers, making them creak, and sought out their rifts, to whistle through them, so that she could hear no slight sound outside that rude orchestral shell.

Mr Cornellis leaned back against the wall, with his hands behind him, as a protection to his coat, and looked out to sea; but on him, on him alone of the four, the fascination had no power. The same wondrous expanse, the same travelling glories and obscurities, the same mysterious depths and distances, and glimpses into further far-away, and screens veiling the far-off, the same call of the many-voiced ocean in one great harmonious song—passing over the mind of Mr Cornellis, not even as a breath over a mirror that leaves a momentary trace—it affected him not at all, for the faculty was dead in him, if it had ever existed—the faculty of responding to the hidden things of nature. One deep calleth to another deep, sang David, sitting on the hill-slope of Bethlehem, looking away west to the Mediterranean, as the sight of the sea woke in his soul a consciousness of the Divine, of the Eternal; and the deep sea still calls to the deep in every human soul that has depth; only to the shallow puddles does it call in vain.

Where the planks were joined on the side where stood Mr Cornellis, a little rift remained. The planks had not fitted originally, or had warped after having been nailed to the stanchions. Through this cleft he looked, and he could see his daughter. He could not see the face of the child on her bosom; but he saw the head over her arm, and the golden hair in dimpled waves flowing down upon Josephine's dark-blue dress, and the parting on the top of the head, and just a strip of white brow.

Then both men heard the clear, beautiful voice of Josephine raised in song:

O wie wogt es, wie wogt es, so schön auf der Fluth,

and looking in, saw her swaying the sick Bessie in her arms to the rhythm of the melody.

Cable saw more—he saw the delicate, transparent hand of his child raised, stroking the cheek of her nurse, and then—the song of the mermaid was interrupted as Josephine turned her lips and kissed the little hand.

Josephine did not continue the song, but said: 'Bessie, can you kneel on my lap, and let me tell you something?'

The child did not answer in words; she had become very silent of late—the closeness, the reserve of her father was showing itself as an inherited characteristic in her. But though she did not speak, she acted; she raised her head, put her hands on Josephine's shoulders, and knelt on her lap, opposite her, still resting a hand on each shoulder of her nurse. The wind blew in, took her golden hair, and swept it forward towards the face of Josephine; and Josephine was obliged to make her hold her head away, lest the hair should spread itself over her face and obscure her eyes and prevent her from speaking.

'My dear Bessie,' she said in a voice full of gentleness and sweetness, and with a tremble in it that now never left it, 'I must tell you something. I cannot let you coax me, and pat my cheek and kiss me, as you so often do, without your knowing to whom you show this love.'

Then Cable's brows knitted. Josephine was going to betray the trust imposed on her, to tell the child that she was her stepmother, and to implant in Bessie's mind the suspicion that her father had been unjust to one who was kind and good. He took a step forward to leave his hiding-place and prevent the disclosure; but he thought better of his resolution, and desisted. He must not provoke a scene which would agitate his child.

'Bessie,' said Josephine, 'I do not think your father would wish you to be so dear and sweet to me, to let me think you loved me, and remain in ignorance of what should be told.'

'She is false also,' thought Cable; 'she *knows* I do not wish it.'

'My darling,' continued Josephine, 'look me full in the face—look with your blue eyes straight into mine, whilst I tell you something, and I shall be able to read in your eyes what you think.' She paused, and drew a long breath. 'You know, my pretty pet,' said Josephine, 'how you suffer in your back, how that you have always—that is, since you can remember—been a sickly child; that you have not been able to play with your sisters like those who are strong; that you have had much pain to bear, and many sleepless nights. You know that now you are very weak and soon tired, and you do not care to talk much or take exercise, but to lie quiet on my breast and look at the sea. My dear, I also like to look at the sea; and the sea has been talking to me, and telling me to be true—always true, and deal openly, and never hide what should be known, and reap what has not been sown by me. That is why I want to tell you this thing now, which has been kept secret from you. Do you know why you are infirm and in pain, with a suffering life instead of a life joyous and painless?'

'I do not know,' said Bessie.

'No one has told you?'

The child shook her head, and as she did so, the

wind caught her yellow hair and wrapped it about her face, so that she was obliged to let go her hold of Josephine's shoulder with one hand, to thrust back her curls behind her ears.

'May I have your blue kerchief with the white spots,' asked Bessie, 'to tie over my head? The hair blows into my eyes, and I cannot see you.'

Then Josephine unknotted the kerchief from her own head—the knot was under her chin—and tied it over the golden head of little Bessie. How was it that, in some dim way, the sight of that blue, white-spotted kerchief was familiar to Richard? 'It is an old pocket-handkerchief of your father's,' said Josephine, 'and covers you best, as his love is spread over your head—not over mine.'

Then Richard remembered the handkerchief, and the mockery with which once Josephine had spoken of it.

'When your father left Hanford, where he once lived—that was when you were quite a baby, and you remember nothing about it—then he left this kerchief behind, and I have kept it ever since.'

'Were you there then?'

'Yes.'

'Why did papa leave that place for St Kerian?'

'Because, in the first place, the cottage at St Kerian came to him from your great-uncle; and in the next, he had very painful associations with Hanford.'

'You knew him there?'

'Yes—and it was there that the sad accident happened which has made you a sufferer.'

Cruel, cruel Josephine! always wounding! She was about now to tell his daughter how he had let her fall when he was drunk, and so to turn away the child's heart from him. Thus were his mother's words likely to come true; he had thrown away the heart of his eldest, and the heart of his youngest was to be plucked from him. He set his elbow against the wall, and his fingers he thrust through his hair, and he looked with eyes that gleamed with remorse and anger through the knot-hole at Josephine.

Then she went on, in her low voice, that quivered as sunlight on the surface of water: 'Look me well in the face, dear Bessie, and do not take your eyes off mine. You shall know the truth now, from my lips. The reason why you have a bad back and an unhappy life is this—that you were let fall on a hard stone floor, when you were a baby, and your bones soft and not full set. That is the secret that has not been told you. You were born sound and strong as Mary and Jane and Effie and Martha, and the rest; and now you would be able to run about like the rest, and be strong, and have no pain, but for that fall.—Well?' The great brown eyes of Josephine looked into the blue eyes of the child, inquiringly. 'Have you nothing to ask? Do you not want to know where the guilt lies of ruining all your sweet and precious life?'

Bessie shook her head, and her golden hair did not flutter, but the end of the blue, white-spotted kerchief, with R. C. marked on it, flapped in the wind.

The brow of Cable was drawn and corded like rope, and his knees shook under him with convulsive agitation. Should he now step forth at this supreme moment and arrest the word on the heartless, venomous woman's lips?

Then in the same low, quivering tones, but yet so clear that Richard lost not one word, Josephine went on: 'It was my doing, Bessie. I—and I alone am to blame for all your suffering; and that is also why your father left Hanford—to take you away from me.'

Not a wink, not a contraction of the iris in the child's blue orbs.

'Some one,' said Josephine, 'said to me that when you were told this, you would hate me, and raise your little fists and beat my eyes till they were blind with blood and tears.'

Then little Bessie let go her hold of Josephine's shoulders, and threw her arms about her neck, and platted the white fingers in her dark hair, and kissed her passionately on the eyes, and then laid her little head on one of Josephine's shoulders, and looked up into her eyes and said: 'But—I am glad it was you, and I love you a thousand times better.'

Out seaward was a long, hard-edged, black roller coming on to the shore, looking as black and hard as the iron rocks against which it was about to fling itself. But at one point the crest broke and turned into foam; at another point far away in the same wave-crest, another white foam-head appeared; and from each side the foam ran inward, and it seemed as if they must meet and turn the whole long wave into one white breaker. But no! There heaved up between the approaching lines of foam a yeasty heap of water, into which the advancing wave dissolved, and lost its continuity. Richard looked seaward at this roller. Little matters determine our actions in moments of indecision. Had the foam-lines met, he would have stepped forward, and an immediate reconciliation might have ensued. But the failure in the wave broke down the dawning desire for reunion, and he stole away back to the inn without a word.

As he left, Mr Cornellis stood forth, and saw him go, and in another moment confronted his daughter and Bessie. But Cable went into the *Magpie* and ordered his horse. Then said Mrs Corye to him: 'I suppose you can't carry a parcel? The young woman has done all the seven confirmation dresses, and they are tied up in a parcel, ready to be sent to St Kerian.'

'Give them to me,' said Cable; 'I will take them in front of my saddle.'

When Josephine caught sight of her father, she sprang up with a cry of pleasure and with a flushed face, placed Bessie on the seat and ran to him with outstretched arms. She was so poverty-stricken in love, that she hailed with delight the appearance of one to whom she was tied with the tenderest bands. 'O papa! how kind of you to come and see me! Oh! how is dear Aunt Judith? I have not seen her for so long, and I do love her so! O papa! this is a pleasure.' She held his hand in both hers and wrung it and kissed it, and wept with delight.

'I have come to fetch you home,' said Mr Cornellis. 'Your Aunt Judith is expecting you, and I want you.'

'Papa!' exclaimed Josephine suddenly, 'you are in mourning—deep mourning. What has happened?'

'My dear, I have lost my wife. You know that I married Miss Otterbourne, who was twenty years older than myself. She has not lived long.

The complete change in the modes of life, after she had settled into old-maidish ways, broke her up very quickly.'

'O papa, papa! And where are you now?'

'At Bewdley, my dear.'

'But that goes to Captain Sellwood.'

'Not at all. She had free disposal of her property, and she has left everything to me.'

'But—it is not fair.'

'I do not ask your opinion in this matter,' he said coldly; 'I have come to fetch you home. Judith is getting old and failing, and I want you to manage the house.'

'But—papa—I cannot leave.'

'Why not? Richard Cable will have nothing to say to you. Has he given you the least encouragement?'

She was silent.

'Do you know that he overheard all that passed between you and the child just now? Had he desired a reconciliation, he would have sought it. He did not. He never will. Give up this absurd and hopeless Don Quixote pursuit, and come with me. I am now very well off. You were at Bewdley as a servant; you come back as mistress. I have packed off the worthless crew of domestics and hangers-on who preyed on the old lady. Come back with me. You have done more than was necessary to satisfy that fellow Cable; and as he still rejects you, show him proper pride, and leave him to himself.'

'Papa!—she breathed fast—'you are rich now?'

'Yes, very.'

'Then, oh, do repay the insurance.'

He gave her a look, so evil, so full of rage and malice, that she turned sharply about to see Bessie.

He did not speak again; he went away without another word or look, and left without a parting message through the hostess.

Not so Cable.

When Josephine came in, Mrs Corye pointed to the table, on which something was scrawled in chalk. 'Look there,' she said. 'He—I mean Cable—wrote that for you, and when you've read it, wipe it out.'

On the table was inscribed: 'Thursday—bring Bessie. Friday—confirmation.' That was all.

## THE REVIVAL OF SMUGGLING.

BY A REVENUE OFFICER.

THE discoveries of private stills, and the detections of smuggling operations, which have of late years been the subject of frequent announcements in the newspapers, point to the revival of practices which it was considered had almost been abandoned by the inhabitants of these countries. In one district in Inverness-shire, nineteen illicit distilleries have been discovered within the last five years by the revenue officers; and numerous cases of the same kind have occurred elsewhere in Scotland and in Ireland. The revival of this form of smuggling is due in great measure to the facilities with which the materials used in the manufacture of spirits can be procured. Many persons who are well acquainted with the finished article in the shape of whisky, are not perhaps

aware that the grain from which British spirits are made must have gone through—either wholly or in part—an extended process of preparation called malting. This process consists in steeping the grain in water for about forty-eight hours; allowing it to remain in a heap until it germinates; spreading it out on a floor for seven or eight days, to regulate the growth of the rootlet; drying it on a kiln; and finally, grinding or crushing it in a mill.

The process of malting requires a variety of appliances and circumstances, which proved a serious obstacle in the way of the illicit distiller when the law prohibited the manufacture of malt except under the supervision of revenue officials. The smuggler sometimes effected the preliminary operation of steeping by depositing the sacks of grain in a bog or mountain morass, sometimes in concealed cisterns made for the purpose. A lonely 'bothy' or a loft in a dwelling-house was used for the germinating process; and where a friendly miller could not be resorted to for drying and grinding, secret kilns were constructed, and the grain crushed between a rude kind of rollers. But the presence of grain undergoing the malting process is easily known by its peculiar smell, and to prevent its detection by the practised nose of the 'gauger' was a matter which required caution and skill. The mills and kilns to which smugglers might resort for accomplishing the final stages in the preparation of grain for distillation, were frequently inspected by the revenue officers, and heavy penalties inflicted on the owners if malted grain was found on their premises.

As an instance of the difficulties connected with illicit malting, the following story is told on the authority of a Perthshire farmer, who in his early days practised this branch of smuggling. He had on one occasion a quantity of barley in the germinating stage on a loft in his house, when he learned that the excise officer and his men were in the neighbourhood, on the lookout for offenders like himself. Gathering all the hands available on the premises, he had the grain put in sacks and hastily conveyed to a neighbouring wood. As he anticipated, the officer paid his house a visit, but went away apparently satisfied that all was correct. As soon as it was considered that he was clear of the coast, all hands were summoned again, and the grain was brought back. Our friend retired to bed congratulating himself that he had eluded the minions of the law, but awoke to find his enemies at the gate, and in a short time saw them laying violent hands on his concealed property. For this offence he was sentenced to pay a fine. Resolved, however, to pay it at the expense of the revenue, he set about 'running' another floor of malt, was detected a second time, and committed to Perth jail for forty days—a mode of treatment which convinced him that honesty, if not, in his opinion, the best, was at anyrate the safest policy, and henceforth he eschewed all smuggling operations.

It will be seen that the preparation of the grain was a great obstacle in the way of the private distiller producing the finished article. This obstacle was removed by the abolition of the malt duty in 1880. The manufacture of malt, duty-free, for distillation was allowed before that year, but under the strictest surveillance. Malt intended for use in the manufacture of beer was

subject to a duty of two shillings and tenpence-halfpenny per bushel. By the Beer Act of 1880 this duty was transferred to the beer itself, and thereafter all malt could be made without official supervision of any kind. The consequence is that the smuggler can purchase or prepare the materials for distillation without let or hindrance. That advantage is taken of this is apparent from the frequent detections of private distilleries. Smuggling of this nature, however, possesses few of the exciting elements formerly connected with it. The illicit trader of the 'good old times' defended his property and 'plant' with courage and obstinacy, when discovered; and it sometimes happened that the excisemen had to retire vanquished even when supported by the military. The modern offender usually decamps when he is about to be detected, leaving the officers the somewhat barren triumph of seizing or destroying his apparatus. A few instances have occurred of late where a slight show of resistance was made to the invading force; but a successful attempt to defeat the law by force is out of the question nowadays. It sometimes happens, however, that the smuggler, if not altogether successful in baffling his persecutors, outwits them in a way that does credit to his ingenuity. An instance of this occurred a few years ago in a certain district in Scotland. A man had been engaged for a considerable time in illicit distillation. Aware, however, that detection would overtake him some time or other, satisfied with the luck he had experienced so long, and having all but worn out his distilling utensils, he went boldly to the supervisor of the district and offered, in exchange for a pecuniary consideration of greater value than his worn-out plant, to communicate the whereabouts of an illicit distillery. The bargain was struck; and the supervisor discovered, when it was too late—the informer having left the neighbourhood—that he had been sold by the smuggler!

The disposal of the spirits when made is a matter that requires the greatest care on the part of the illicit trader, and can only be done by the connivance of the people of the district. The depressed state of trade and agriculture in recent years has no doubt induced the small farmers and cottars of some districts to purchase whisky that can be supplied to them at one-third the price which the legal trader requires. In former times, the smuggler found ready customers in the remote country publicans; but not many of this class exist now, and of those that remain, few venture on the purchase of spirits which, from their bad quality, are acceptable only to the lowest class of drinkers, and the possession of which it is difficult to conceal from the officers of the revenue. The smuggler is consequently compelled to dispose of his stock in small quantities for direct consumption. Sooner or later, information of his proceedings leaks out; his business prospects are suddenly terminated by the capture of his premises and seizure of his property, while the persistent efforts of the excise officials to make his personal acquaintance render it necessary for him to seek a home elsewhere. It may be safely predicted, therefore, that—unless the revenue authorities remove their officers to too great a distance from the haunts of the smuggler—even the increased facilities which

he now possesses for obtaining his materials will not lead to the continuance of a practice attended with so many risks; and the revival of smuggling is probably only a prelude to its final abandonment.

## THE OLD SECRETAIRE.

### A CHRISTMAS STORY.

#### CHAPTER II.

MORE than half a century had passed since Arundel Secretan had been found with the rapier in his heart, and the west wing had still remained tenanted by the rats and mice and the shade of the unfortunate gambler. Again the Yule-log stood without the door; there was a pleasant sound of laughter in the great hall, for the snow was falling thickly on the bare oaks and pines and dashing against the casement. Inside, all was light and warmth, a huge fire burning on the tiled hearth, rugs and skin-mats scattered about with all kinds of comfortable lounges, from a settee, borrowed from the drawing-room, to the beehive straw-chair, purloined for the moment from the kitchen. Holly and mistletoe gleamed everywhere, from ancient pictures and chain-mail, to the seventeenth-century clock ticking on the stairs. For some moments the merry party were silent, listening cosily to the snow beating on the lattice. Presently, Ada Secretan, sole daughter of the house, roused herself from the contemplation of the cheery blaze to give a fresh turn to the conversation.

'We are here for a whole fortnight,' she said. 'In my limited recollection, I distinctly remember being snow-bound here for fifteen days. Suppose this should happen again, my sisters, cousins, and aunts!'

A golden head shimmered in the light for a moment, and a low rapturous voice was heard to ejaculate the single monosyllable 'Jolly!' But the rest of the party became suddenly grave at the bare idea of such a calamity.

'Don't imagine it's slow,' came another mysterious voice out of the gloom, 'because it isn't. I was snowed up in Scotland for nearly a week, once. I never enjoyed myself so much in my life.'

'What did you do, Connie?' asked golden-head from her corner, sleepily.

'Heaps of things, my dear. First of all, we ransacked the place from top to bottom—such a deliciously quaint old house, with old cupboards in all sorts of queer places, and ghostly passages—oh! Then, of course, we had charades and theatricals.'

'We might have theatricals here, Ada,' suggested the girl addressed as Connie, though better known to the world of fashion as the Hon. Constance Lunley, 'if any of the gentlemen are equal to writing a farce.'

'I have been expecting this,' said a man's voice resignedly, apparently belonging to a pair of knickerbockers and homespun hose, half hidden in the beehive chair. 'Of course, you have all forgotten my existence utterly, and equally, of course, I am expected to volunteer my services as author and stage-manager.'

'Oh, Mr Warren, how delightful!' cried a grateful chorus. 'After writing for the London stage, it will be child's-play to make us a little play.'

'Amateurs are so easily satisfied!' continued the dramatist dryly, the hero of more than one successful comedy. 'All you have to do is to give them all leading parts, and there you are, you know!'

'And pretty dresses,' murmured golden-head, intensely interested.

'And pretty frocks, Miss Wynne.—What do you say to attempting something of the *Rivals* and *School for Scandal* type? It would save a vast amount of stagework; and surely, in a jolly old house like this, we might hunt up picturesque costumes enough.'

In spite of his affected cynicism, Frank Warren was by this time as much in love with his own scheme as the bevy of fair listeners. With a dexterity born of long practice, he sketched out rapidly the outline of a plot, which he submitted to his hearers, and which they accepted with fervent if subdued applause. Though the snow beat upon the casement, drifting higher round the laurel and barberry in the drive, there was no repining at the weather in the ancient hall, where the firelight fell fitfully upon a ring of fair flushed faces gathered round the oracle.

'Your brother is expected this evening, Miss Secretan?'—Ada nodded assent.—'And with myself, not forgetting our host and Colonel Lucas, will be enough. Of course, we shall not all be able to play in this piece; but those who don't, can take a part in the *tableaux vivants* afterwards.'

'*Tableaux vivants*, and a play afterwards!' exclaimed Miss Lunley, throwing herself back in a pretended ecstasy of admiration. 'Glorious!—Ada, my dear child, with all your picturesque ancestors and lovely ancestresses, you must have some splendid dresses somewhere.'

'Tradition says there are some in the west wing,' Ada Secretan replied; 'though, candidly, I have never had courage to go there and look for myself. The Haunted Chamber is there.'

'Do you boast a Haunted Chamber?' Warren asked with some curiosity.

As the outer shadows fell, the wind gathered strength in the pines; it grew dark inside in the early gloaming, till nothing but the firelight remained. It was the hour and season for a romantic legend, fresh to some of them, and they gathered closer round the ruddy blaze while Ada Secretan told the story. By the time she had finished, darkness had fallen, and the listeners were very silent. 'And all this happened,' concluded the narrator, 'not sixty years ago.'

'Was the west wing habitable then?' Warren asked presently. 'You can understand the interest I take in this pitiful story. For,' continued the speaker, in a higher key, 'Edgar Warren of the story is my ancestor. Indeed, I am the first Warren who has crossed this threshold since that fatal night.'

'The wing was falling into decay; but still it must have been a pleasant place in the summer-time; and in it were the suite of rooms set aside for the eldest son of the house from time immemorial. Since that night, I don't think any of us have set foot in the wing.'

'It seems a pity to let such lovely old rooms lie idle,' mused Miss Wynne. 'Though I can understand how little your great-grandfather cared for them.'

'He cared a great deal more than people thought,' Ada replied. 'In spite of his apparent harshness and severity, he was very fond of his son, and bitterly disappointed by his dishonourable conduct. He did not live very long afterwards, when Alice Secretan died; and before his decease, he had the entrance to the west wing nailed up; and not a soul has ever set foot in the building since his death.'

'Well, that's a strange way of showing grief,' Warren exclaimed irreverently. '—And what about Clive, the young son and heir?'

'He was taken in good hands, and the estate carefully nursed during his long minority—a fortunate thing for us, as it turned out afterwards. He married at twenty-one that foreign-looking lady who hangs up over the staircase there; and broke his neck at twenty-three over some foolish wager, just in time to save everything from utter ruin; and,' concluded the fair narrator candidly, 'that is really the reason why the west wing has never been restored to its pristine glory.'

'In that case, Mr Secretan has no foolish—that is, no reverence for his ancestor's strange taste,' Warren remarked. 'If your grandfather had not been a friend of "the first gentleman in Europe," that part of Woodside would have been restored long ago! Would he mind some of us exploring it?'

The questioner, at some one's instigation, emptied a bucket of pine-knots on the sullen wood-ashes, and roused up a ruddy blaze, roaring and spluttering up the wide open chimney. Rugs and chairs were brought closer round, and a little gipsy table set in the midst. A solemn footman deposited a tray containing gleaming silver and fragile china on the wicker-stand, and vanished. For a time at least, the spell cast over them all by the legend was broken, and a babel of nimble tongues broke loose. Warren raised himself with a great show of reluctance from his shadowy retreat and stood waiting at Ada Secretan's right hand; for at these cosy afternoon teas they had voted the presence of servants a restraint, and the feeling in favour of self-help was unanimous and voluntary. Presently, when every fair one had been supplied according to her needs, the dramatist drew a chair closer to the youthful chatainaine's side, speaking in a low key. 'You don't know how your little romance has interested me,' said he, 'especially the recollection of my ancestor, Edgar Warren. Talk about having no poetry in real life, with a Haunted Chamber, and a mysterious mansion sealed and barred for nearly sixty years! Miss Secretan, I must have a ramble through these rooms, if I commit burglary to do it.'

'So far as that goes, I do not see why all of us should not go. It will certainly have the merit of being a novel Christmas amusement.'

'Then you really think Mr Secretan will consent?'

'Consent to what?' cried a voice behind, bringing with the owner a gust of cold moist air and a general sense of snow and discomfort.—

'What is the last mad scheme I am to consent to, eh! pussy?'

Warren looked up with serio-comic disgust into Mr Secretan's face, or at least as much as could be seen of it under a shooting-cap with the flaps carefully tied under the ears, and a mackintosh from foot to collar. A little snow collected on his boots and gaiters melted in the warmer atmosphere, and trickled across the polished oak floor.

'You have been sitting over the fire, you lazy young people, till you are all of you half asleep. If you really won't have lamps, ring for some more wood, so that I can see where the mischievous ones are.'

Warren rang the bell, and politely offered to relieve his host of hat and coat; an offer declined at once, on the plea of more outdoor work to be done. As the latter still lingered, Warren hastened to press his request.

'Of course, if you like to run wild amongst the dust and black beetles, I have no objection,' said the cheery Squire. 'It will do the place no harm to have a little air let in. Only, don't get frightening any of my pretty visitors; I want nothing but Christmas roses here on Christmas morning.'

'The thing is done!' cried Warren theatrically, as the outer door banged behind the Squire. 'Most potent, grave, and reverend signors, the mystic west wing is about to be reopened, after an interlude of sixty years'—

But any further declamation was checked by a violent ring at the hall bell; a throwing open of doors, and the entry of three people: one an elegant-looking girl, draped and shawled; the second, a tall military figure; and lastly, a young man in a rough tweed ulster—none other than Walter Secretan of Woodside Manor and Pump Court, Temple; and the before-mentioned Colonel Lucas, and Miss Edith Lucas, his daughter.

Warren stopped in the midst of his florid utterance, and would have come forward, but that he felt a hand laid upon his arm. Looking down, he saw an old man bearing some logs of wood, a bent decrepit man, with heavy overhanging brows, and dark, evil-looking eyes. Somewhat surprised, he would have asked the meaning of this strange conduct, save that the ancient servitor held up a warning hand, and said: 'Sixty years, you say—ay, sixty sorrowful, bitter years.—And you would come, another of your hated race, prying into family secrets.—Listen to me, sir; take an old man's advice, and keep away from yonder wing, or your life, perhaps more than that, will pay the forfeit.' And so saying, he was gone.

It was later in the evening before the astonished hearer found an opportunity of discovering the identity of his strange friend. Without disclosing what he had heard, he drew Walter Secretan out somewhat cautiously. That gentleman was tying his white cravat at the time, a matter just then of more importance to him than anything so mundane as a family servant. 'That?' Oh, that old fellow was my great-grandfather's valet—Silas Brookes, who went on that mad excursion you have heard of. An excellent servant in his day, but getting a little imbecile, you understand.'

Warren did understand, and held his peace. But all the same he felt that the words he had

heard were the outcome of neither imbecility nor madness. Was he hiding some dark secret, or was it merely rancorous hatred of a Warren that dictated the outburst of bitter spleen?

### 'ON GUARD' AT THE OPERA.

SOME who visit Covent Garden during the Royal Italian Opera season may be surprised to notice that the theatre is under the protection of a military guard; for provincial theatre-goers at least are certainly unaccustomed to find their places of amusement surrounded by a cordon of sentinels. The occasional presence of an armed party at the opera-house, however, may be regarded as an instance of the survival of old customs in the metropolis. Just as a stealthy glance into a Whitehall sentry-box, where the words 'Tynt Guard' are inscribed on the suspended board of 'orders,' suggests the period when a veritable tilt-yard occupied part of the site of the present Horse Guards, so the sentries in the Covent Garden piazzas remind one of the times when playhouse tumults were not by any means exceptional occurrences.

Though the opera guard is now chiefly, perhaps, for ornamental purposes, it is not necessary to carry a retrospect beyond the beginning of the century to discover that its duties were originally no sinecure. For example, when the appearances of Macready were causing an extraordinary degree of popular excitement, the streets in the vicinity of Covent Garden became blocked by a vast crowd; and what contemporary accounts term a 'terrible catastrophe' was only averted by the intervention of a largely reinforced guard. Again, in 1813, the members of the guard and a disorderly audience came into actual collision—the struggle, curiously enough, taking place on the stage, and the result being that the guardsmen were disarmed, and their 'firelocks' thrown into the orchestra.

In those times, the guard was probably much more numerous than now, when it consists of a sergeant, corporal, drummer, and twelve private soldiers. The party only proceeds to the theatre on special occasions—when royal personages are to form a portion of the audience. Orders are sent to the regiment furnishing the 'public duties' to provide the 'opera,' and sometimes these instructions are very late in arriving, to the confusion of the company sergeants-in-waiting, whose men, if not 'warned' early in the day, are apt to be out of barracks on their own pleasure. Accordingly, on receipt of a late order of this kind, the sergeants-in-waiting may be seen rushing from one barrack-room to another, crying out, 'Best clothing for opera!' and 'warning' the first men they can find, quite irrespective of the duty-roster, which the circumstances render useless.

By seven o'clock the little party has 'formed up,' with the drummer-boy on the right, and two or three 'men in readiness' at some distance on the left. These men, as their designation implies, are 'in readiness' to replace any members of the guard who, from being improperly equipped, or other causes, may happen to be disqualified for going on duty. A staff-sergeant proceeds to inspect and 'prove' the guard. Having completed this important operation, he orders the men to 'stand at ease' for a few moments; and afterwards opens the ranks. At this juncture, two men,

wearing beards, may be observed to approach carrying between them a wooden coal-tray: this contains the ammunition, of which ten rounds, sowed up in coarse canvas, are supplied to each soldier with the exception of the drummer, who is merely armed with a short sword. When the ball-bags have been securely buttoned up, the pioneers with the coal-tray retire, the drummer swings his instrument on his back, and the guard is marched off.

When he has arrived with his 'command' at Covent Garden, the sergeant 'numbers off' the men. Then he proceeds to 'take over' the guardroom and its contents. There is no 'old guard' to relieve; for the opera guard only remains on duty till the conclusion of the performance in the theatre. The guardroom differs materially from most apartments of the kind, and, indeed, its furniture, though far from luxurious, presents an agreeable contrast to the ordinary guard-bed and trestle-tables which one expects to see in such places. In fact, were it not for the rifle-rack and the inevitable Board of Orders hanging over the fireplace, it would be difficult to guess to what purposes the room is devoted. Besides the above-mentioned essential articles, it is simply furnished with a table, an armchair for the commandant, and a number of what may be styled 'kitchen' chairs for the other members of the guard.

Having enjoined his men to divest themselves of the more cumbrous portion of their accoutrements, the sergeant 'falls in' the first relief; and his satellite, the corporal, straightway posts a 'double' sentry at the doorway by which the expected royal party will enter the theatre. Subsequently, he places two single sentinels in other positions. Then the corporal returns to the guardroom, puts his piece in the rack, and begins to make out the roll of the guard, using his bayonet by way of a ruler. While he is so employed, the men off sentry and sitting in the guardroom begin to look anxiously at the sergeant; they appear to be inclined to make some request, but no one is bold enough to take the initiative. The corporal, however, noticing the situation, musters up courage, and hints to his superior officer that he may as well go to 'draw the pay.' This reminds us to mention, in passing, that the opera guard receives extra pay from the theatrical authorities. Accordingly, the sergeant disappears for a few minutes, and returns bearing a small money-bag. Before he has time to inspect the contents of this, the hoarse call of 'Guard, turn out!' causes the men to seize their rifles, and the corporal to throw down his pen and fix his bayonet. Rushing out into the street, the soldiers make their way through a crowd to form up in proper array on the opposite side, where arms are hastily 'shouldered.' A close carriage drives up, arms are 'presented,' the royal party enter the theatre, and the guard 'turns in.'

The sergeant now empties the contents of the money-bag upon the table. Selecting three shillings, he places these in his pouch, already occupied by the ten rounds of ball-cartridge. Then he hands the corporal a florin, and to each of the other men he gives one-and-sixpence. The drummer-boy now asks the corporal for a slip of paper, and takes down what each man desires

for supper. While he has gone out in search of the constituents of this meal, the soldiers produce table-knives, which they have conveyed 'on guard' in a manner that might amuse a civilian observer. One man, for instance, takes off his bearskin cap: he has his knife fixed in the basket-work which supports the interior of this form of headdress. Another, opening his valise, finds a knife and fork inside a boot. A third, having been somewhat abruptly detailed for 'opera,' has thrust a knife amid the folds of his greatcoat. Before very long, the drummer enters the guardroom, having with him a basket of provisions, and a large vessel containing beer, of which each man on guard is entitled to two pints. When the supper has been discussed, the sergeant calls for 'two men for patrols,' and marches off to visit the sentries, whom he shortly afterwards relieves, giving each his eighteenpence as they arrive in the guardroom.

The sentries 'on opera' are provided with neither sentry-boxes, watchcoats, nor order-boards. Their 'orders' are of a general nature; and as they are all under cover, watchcoats, and especially sentry-boxes, would be superfluous. The 'double' sentry on what is considered the most important post has already been alluded to. One of the single men is placed under the piazzas; his instructions chiefly relate to keeping at a proper distance the gamin class of the neighbourhood, who are frequently disposed to be intrusive. But in this duty the soldier is ably seconded by the policeman, who inspires a considerably greater degree of fear than the armed representative of authority. The remaining sentry mounts duty within the theatre, marching up and down a kind of corridor in a 'smart and soldierlike manner.' His function may be regarded as being purely of an ornamental nature, unless, perhaps, in the event of fire, when he is instructed to 'alarm the guard.' As the guard only continues for three or four hours at the theatre, the amount of 'sentry-go' which falls to the lot of the men cannot be considered severe. Each soldier remains on sentry about an hour; and in addition to this, he may have to go once on 'patrols,' a duty occupying some five minutes.

As the time draws near for the conclusion of the performance, the sergeant reminds all concerned to be ready to turn-out at a moment's notice. The men place their rifles within easy reach, and pass the interval in stowing away their table-knives and adjusting their equipments to 'go off.' Soon the cry of 'Guard, turn out!' is heard. When arms have been presented to the royal party, the commander of the guard gives the order, 'On with your valises,' an order which is obeyed with great alacrity; and in a few minutes the party has commenced its homeward march.

When the opera guard has come pretty near the barracks, the drummer runs on in front, calling at the top of his voice, 'Gate!' After this has been repeated by the sentry of the barrack-guard, the corporal of that body appears with a large bunch of keys, and in a somewhat sleepy manner unlocks the gate. The 'opera' now marches to the spot where it was arrayed for duty in the evening, and is there halted. Two figures advance through the darkness, bearing a coal-tray, in which the soldiers place their ammunition. And

almost before the echo of the stentorian command, 'Dismiss!' has died away, the men of the opera guard have disappeared into their barrack-rooms.

## THE OLD WAY AND THE NEW.

### CHAPTER VI.

It was a month later, one of those chill, drizzling November days when London, both urban and suburban, looks more dreary and soul-depressing than at any other time. Matters with Matthew Roding had gone on from bad to worse. At Chesterfield Villa, there were two men in possession—where an inventory of every article it contained had already been taken—one of whom made himself at home in the servants' offices; while the other sat in state in the gorgeous back drawing-room, turning over some of the gilt-edged volumes with languid interest, and refreshing himself copiously at frequent intervals from a can of beer at his elbow. The servants were scandalised, and would have resigned in a body had not their wages been so much in arrear. Horses and carriages had been sent back to the people from whom they had been bought, but not paid for, so as to enable the best to be made of a bad bargain. Mr Roding's balance at his banker's had dwindled to the smallest amount compatible with a balance at all; in ten days' time, acceptances to the tune of seven thousand pounds would fall due, which, so far, he saw no possibility of meeting.

At this time he had not left home for upwards of a week. A bad sore throat had laid him up for two or three days; but after he had got better, he evinced no desire to go near the City. 'What good can I do if I go? None,' he said a hundred times bitterly to himself. For the past three months his life had been one incessant slow torture, and now the time had come when he could bear it no longer. He looked fully ten years older than he had looked six months previously—a man gray, worn, haggard, and prematurely old. Grigson came and went between Throgmorton Street and the villa once a day always, sometimes twice. Bunker, meanwhile, had been transferred from the Bankside office to the City. It was necessary that some one should be on the spot to answer the numerous callers, friendly and unfriendly, but for the most part pertaining to the latter category, all of whom wanted to see Mr Roding in person. For these people, Peter had but one answer. Mr Roding, he told them, was away on the continent, engaged in negotiations of the utmost importance with an eminent foreign firm, and it was quite uncertain when he would be back. Peter believed implicitly what he thus stated to be a fact—Grigson had assured him that it was so; for no power on earth would have induced him wittingly to become the mouthpiece of a lie; and so evident was the old clerk's air of sincerity and good faith, that many people went away believing fully what he had told them; but others there were who laughed in his face, and asked him what he took them for, and muttered anathemas, not loud but deep, on the head of the man whose honeyed phrases and golden promises had led them on so pleasantly to their undoing.

Many women there are—more women than men, perhaps—who accept the inevitable, if not exactly with cheerfulness, yet with a quiet philosophy all their own; who, knowing that what can't be cured must be endured, yield themselves to the endurance part with the best grace possible under the circumstances. But of these women Mrs Roding was not one. Rather did she pertain to that numerous class who regard any misfortune which may befall themselves as a sort of personal affront on the part of providence, while quite ready to concede that their neighbours deserve whatever may fall to *their* lot out of the same doleful cornucopia. Travellers tell of certain tribes of aborigines who, when their prayers are not answered, or are answered backward, hack or otherwise maltreat the wooden fetish to which they have been offering their supplications only a little while before, in order to show their displeasure at being so scurvily treated. Had Mrs Roding belonged to any such tribe of idolaters, she would certainly have done as they did.

When the blow first fell, she wept till she could weep no more; after that, she passed nearly all her time in the little boudoir which had been fitted up for her special use. Here, with the room half-darkened, she lay on a couch hour after hour in a sort of sullen torpor, rarely speaking to any one, and so evidently desirous that no one should speak to her, that for the most part she was left to eat her heart out in silence and alone. She showed no interest or concern in whatever might be going on in the house. Now that all the pleasant things of life, or such as had been so to her, were slipping from her grasp, she felt as if there was nothing left worth living for. When her child ventured to go near her—for when he saw that she was in trouble, he remembered nothing except that she was his mother—she would weary of his presence in the course of a few minutes and dismiss him abruptly. Then would Freddy take his little troubles to Mary, and find comfort there.

Grandad could scarcely fail to be aware that matters at the villa were not altogether as they should be; but, whatever he might see or hear, he kept the knowledge to himself, and went to and fro in his usual cheery, unruffled way, like a man who has put aside life's cares and anxieties for ever. When he heard that his son was indisposed and obliged to remain indoors, he sought Mrs Roding, and told her that, should Matthew feel dull for want of company, he, Grandad, would willingly sit with him for an hour or two a day till he should be able to get about again. But Mrs Roding scouted the idea. What her husband needed, she told him, was absolute rest and quiet; and company, even the entertaining company of Mr Roding, senior—this with a little curl of the lip—would only tend to make him worse instead of better. Besides which, although he was at home, he still had his correspondence and other matters to attend to.

Grandad bowed his head in mild assent, and thereafter contented himself with an inquiry each morning as to the state of his son's health. On this November afternoon to which we have now come, Matthew Roding sat shut up alone in his room, an elbow resting on either arm of his chair, listening to the moaning of the wind in the chimney, and watching the raindrops

trickle one by one down the window. He heard the wind and he watched the raindrops, but without any conscious effort on his part; they had no share in his thoughts, but served merely as an appropriate setting or framework for them. All within him was dark and dreary; all without was the same; nature seemed to chime in with his mood. He experienced a vague sense of congruity without being definitely conscious thereof.

Now and then his eyes turned and glanced at the clock on the chimney-piece. There were letters he ought to have written, but he did not write them; there were papers he ought to have looked over, but he heeded them not; he could do nothing but wait, wait, wait till the fingers of the clock should point to the hour of four. After that, any moment might bring him the telegram which would announce to him either that he was hopelessly and irretrievably ruined, or else that there was still a final loophole of escape open to him. One last throw was left him in the desperate game he had been playing with Fortune for his opponent. Should the bill of the Burnside and Hilsden Extension Railway pass triumphantly through Committee this afternoon, as he had fair reason to hope it would, then on the morrow the shares would go up like wildfire, and he might even yet be saved. The bill in question was only a very little bill in itself, but a furious battle was being waged over it by two great Companies, and to that fact it owed its importance as a speculative medium in the share market.

The original Burnside and Hilsden Railway was a short local line some thirty miles in length, connecting the two places in question, both of which were fourth-rate country towns of little importance either commercially or otherwise. A short branch of five miles connected the Burnside end of the line with the main line of the South Northern Railway, and thus opened up the world at large to a district which till then had been secluded among wild fells and desolate moors. It had been an article of faith with the promoters of the little line, and for years after it was opened, that some day the South Northern would feel impelled to buy it up—of course at a guaranteed percentage of interest—and assimilate it into its own huge system, as it had assimilated so many petty local lines already. But, so far, the big line had turned a deaf ear to the blandishments of its small neighbour, which, in prosperous years, had never succeeded in paying its shareholders more than an infinitesimal dividend, and in bad years had paid them nothing. So matters had seemed destined to go on for ever.

But one morning there appeared in the *Times* and other papers a lengthy prospectus of the proposed 'Burnside and Hilsden Extension Railway.' The world—or rather that section of it which interests itself in such matters—was struck with surprise. So carefully had the secret been kept, that the day before the prospectus appeared, the Burnside shares had been quoted at forty-five below par, which was the figure round which they had fluctuated, with only slight degrees of variability, for several years past. Now, however, they went up with a bound, till, in the course of a few days, they stood at par. Of course many would-be buyers found to their disgust that

there was nothing left for them to buy, a great proportion of the stock having been bought up by a certain clique who had been in the secret all along. After standing at par or thereabouts for a short time, the Burnside shares began to decline, and several of the more cautious school of speculators, content with the profit they had already netted, took alarm, and became as eager to sell as a little while ago they had been to buy; for the great East Western line, the most formidable of opponents, had announced its intention of fighting the proposed bill tooth and nail, and of throwing all the weight of its vast influence into the scale, in order to have it defeated in Committee. At the same time, it was well known that the South Northern would do all that lay in its power to promote the passage of the bill. It was to be a contest of giants.

Well might the East Western buckle on its armour for the forthcoming fray. What the audacious Extension Bill proposed to do was nothing less than, by means of tunnel and cutting, to pierce the wastes of high-swelling moorland which stretched far and wide at the back of Hilsden, and so, by effecting a junction with the main line of the East Western at a point some score miles further north, and obtaining running powers over it for the remainder of the distance, secure access to the great and fast-increasing manufacturing town of Bellhampton, of the carrying-trade of which the East Western had till now had nearly the sole monopoly. By means of this extension, the hitherto stagnant little Burnside and Hilsden line would become an important link in a new through-route to London and the south, albeit the route in question would be somewhat of a roundabout one.

Matthew Roding had bought heavily when the shares stood a trifle below par, in the full belief that the bill could scarcely fail to pass, in which case the shares would go up again faster than quicksilver after a storm.

All week had the battle been raging before a Parliamentary Committee, and to-day it was expected that the all-important decision would be given; therefore was it that Matthew Roding glanced often at the clock.

One after another the slow minutes dragged themselves away till four o'clock had come and gone. Then Matthew opened the door a little way and sat listening for the double knock which might come at any moment. It had been arranged that Grigson should telegraph from Westminster the moment the result was known, and follow up the message in person as quickly as possible.

At length the long-expected summons came. A moment later the telegram was brought him, but he forbore to open it till the servant had left the room. Then he tore it open with fingers that trembled like those of a man stricken with palsy. The message consisted of three words only, but three words that were pregnant with a terrible significance to him who read them—'Bill thrown out.' That was all, but it was enough. The telegram dropped from his nerveless fingers. He sank back in his chair, and pressed his hands to his heart, as though something were stifling him. His last reed was broken, his last hope strangled. Now that he knew the worst, now that he knew nothing could save him, the tension of his nerves,

which of late had goaded him almost to madness, suddenly gave way. A dull, lethargic apathy began to steal over him. Nothing could matter now; the blow had fallen; he had drunk the cup of bitterness to the dregs.

The afternoon waned and darkened; a servant came in with a lighted lamp and drew the curtains; but Matthew neither stirred nor looked up. Grigson had not yet arrived, but that mattered little; he wanted to listen to no details; the one huge, indisputable fact overshadowed all else. By-and-by there came a tap at the door, which, if Matthew Roding heard it, he did not heed; then the door was opened and Ruff Roding entered. After closing the door, he stood for a moment or two, as if in doubt, and then went slowly forward. Then Matthew looked up, and the eyes of father and son met. Never had Ruff been so shocked at anything as he was now at the changed appearance of his father, whom he had not seen for nearly two years. He felt a choking sensation in his throat, and he crushed back his rising tears as he drew near and held out his hand. 'Father, I heard to-day for the first time that you are in trouble,' he said. 'I have come to see whether I can be of any use to you.'

Matthew let his nerveless hand rest for a moment or two between the young man's warm palms; then he said: 'It's very kind of you to come, Ruff. Not that you can be of any use—nobody can be that—still, it's kind. But sit down, won't you? What a beastly day it is!' He evinced not the slightest surprise at his son's unexpected appearance. It may be that, for the time being, he had lost the faculty of feeling surprised at anything. He sat staring stonily into the fire, taking no further heed of his son's presence. Ruff was at a loss what to say or do; nevertheless, he determined to stay on, for there was a look in his father's face—the look of a hunted animal brought to bay and grown desperate—which rendered him vaguely uneasy. He wished Grandad were there; it seemed strange that he was not; but he had left the house some hours ago, and no one seemed to know when he would return.

'This has been a terrible business, Ruff,' said Matthew at length, rousing himself with a deep sigh, but without turning his gaze from the fire—'a terrible business from beginning to end. I'm glad the end has come. I think I shall sleep soundly to-night, which is more than I've done for the last three months.'

'Is there no hope—no possibility of escape from this dreadful tangle?'

'None,' answered his father laconically—'none.'

A minute later there came a ring at the front door, and presently Grigson came hurrying in. He stared at Ruff, whom he had never seen before, as though wondering who he was, and what had brought him there at such a time.

'You got my telegram, sir, informing you of the result?' he said. Mr Roding merely nodded assent. 'It came on most of us like a thunder-clap,' went on the young clerk, 'although, of course, after Merryfield's speech on the other side, which was certainly a masterpiece, some of us'—

'Spare me the details, Grigson,' broke in Mr Roding. 'The result is enough.—You know what it means, eh?' he added, turning sharply on him.

The latter looked very grave, but did not answer.

'It means ruin, Grigson—ruin absolute and irrevocable.'

'I'm deeply grieved to hear you say so, sir; but I sincerely trust matters are not quite so bad as that.'

'They could not be worse; that would be impossible.' So he spoke, little dreaming what a few hours would bring forth.

'I will not detain you now,' he continued after a short silence. 'But be here in good time in the morning. There are a lot of papers you and I must go through to-morrow.' He turned and held out his hand—a thing he had never done to Grigson before. The young man pressed it respectfully, bending over it a little as he did so; then, with a brief 'Good-night, sir,' he took up his hat and went.

'The Pater seems to set a lot of store by that fellow,' muttered Ruff under his breath; 'but, for all that, there's something in his face I don't half like. What shifty, flickering eyes he has; and what a cruel, white-lipped mouth, which his thin moustache only half serves to hide! I should like the job of painting his portrait. It seems to me that I could bring out on the canvas the hidden soul of the fellow after a fashion which might possibly startle some of his best friends.'

#### WILD TRIBES OF PATAGONIA.

By the ordinary inhabitants of Europe, a good deal remains to be learned regarding the Argentine Republic. Except by a few persons specially interested in the country, little is known concerning it, even by those of more than average intelligence. Seldom does its name occur in our newspaper columns; topographical accounts of it in ordinary geographical manuals are meagre, and often incorrect; while any reference to the country in common conversation brings out a blank look which indicates the absence of any well-defined ideas about the country or its inhabitants. Yet it is a country of great present interest and much prospective importance. Its geographical extent is enormous. Extending over nearly thirty-five degrees of latitude and twenty of longitude, it has an area of one million one hundred and twenty-five thousand square miles, or a superficies six times that of Germany, France, or Spain, and ten times that of Italy or Great Britain and Ireland. At the close of 1882, the population was estimated at three million twenty-six thousand, of whom three hundred and sixty-three thousand seven hundred and forty-five were foreigners, chiefly Italians, French, Spaniards, Germans, and English, the remainder being Argentines—a mixed race descended from early settlers—together with various tribes of wild Indians, to be found chiefly in the great territory of Patagonia.

The capabilities of the country are prodigious. Supposing the soil to possess, on the average, the same capacity for producing food, and the bowels of the earth to contain raw material wherewith to nourish industry equal to that of Germany—and its capabilities are really much

greater—there is still room enough for two hundred and seventy millions of additional population, who could live in greater comfort than the average inhabitant of the Old World. In its central latitudes, the climate of the Argentine Republic is comparable to the finest parts of Europe. It is milder in winter, but rather hotter in summer, than the climate of Italy. Nowhere in the country is it either completely continental or purely maritime; it is rather a medium between the two, and is of the character best adapted both for the health of man and the productiveness of the soil.

Patagonia, the southern portion of this great country, is a region of vast solitudes, thinly dotted with the huts of Indians, and pastured by wild animals, including the guanaco, the ostrich, and other useful creatures. It is a land of romance, much of it still unexplored, and affording scope for tales with any amount of poetic embellishment. Exploration of the country is progressing; and in occasional records of discovery is contained much valuable information. Among recent explorers, one of the most distinguished is Señor Ramon Lista, a member of the National Academy of Sciences in the Republic, who has lately published in the Spanish language, at Buenos Ayres, a volume containing some account of his discoveries.

Part of this interesting volume is occupied with a description of the Tehuelches, a tribe of Indians, noticed by former travellers, but really not known with any distinctness till the publication of this volume. Specimens of the confused and contradictory statements previously current are furnished by Señor Lista. On the subject of their stature the most opposite opinions have been published about the Tehuelches. Pigafetha long ago described them as giants, saying, 'these men are so large that our head scarcely reaches to their waist.' On the other hand, in the account of Magellan's voyage, published in 1557, the Patagonians are described as two or three handbreadths in height—a handbreadth extending from the end of the thumb to the tip of the little finger extended. In the voyage of Jofre Loaisa (1525–1526), published by Oviedo, it is said 'the men are three handbreadths in height, and the women of equal stature.' In the account of Drake's voyage, published in 1578, the exaggerations of Pigafetha and Oviedo were for the first time contradicted; but Argensada, in his history of the conquest of the Moluccas, quoting the opinion of Sarmiento de Gamboa, in 1579, describes them as nine feet in height. No notice of their stature was given in the published accounts of the voyages of Cavendish, the inference from which is that nothing remarkable was observed. Richard Hawkins, in 1593, considered them to be real giants; and in 1599, Oliviero de Noart described them as men of lofty stature. Commodore Byron, who cruised in the Strait of Magellan, in 1764, with the ships *Dolphin* and *Tamar*, described the Patagonians as not only men of high stature but actual giants. In 1767, Captain Wallis, who likewise passed the Strait, saw those 'giants,' but said the majority of them were scarcely five feet six inches in height. The naturalist D'Orbigny, who took some measurements among the Indians of the Rio Negro, has placed their average height

at five feet nine inches. The explorer Musters makes them six feet high. The two last-named authors are considered by Lista to have come nearest the truth. Seven of the Tehuelches, whom he had personally measured, gave an average of six feet two inches. The Indian Hawke measured little more than six feet three inches, and was the tallest man known to him. The chief Orkeke measured more or less about the same. The women are not so tall as the men; but their exact measurement he could not give, as they would not allow it to be taken. The Tehuelches, therefore, are regarded by Señor Lista as the tallest men in the world. They are often strong, with feet comparatively small, thick heads, hair black and long, eyes black, large, and a little oblique, as among the Chinese and the Kassequers; the face oval, the forehead convex, the nose aquiline, the mouth large, and the lips thick.

Among Indians without any mixture of European blood, it is not rare to see the upper teeth worn to the root through mastication; but they are almost never decayed. This is one of their most remarkable ethnological characteristics, and is common to nearly all races of indigenous Americans. The same feature has been observed in the prehistoric skulls of Minnanes, Puelches, and Tehuelches, in Señor Lista's anthropological collection. This phenomenon has engaged the attention of naturalists, but no rational explanation has been obtained. The distinguished naturalist, Dr Lacerda, observed the perfection of teeth and the absence of decay in races indigenous to Brazil. Among a multitude of skulls which form the collection in the museum of Buenos Ayres, only one has been observed with any appearance of decay, which had resulted in perforation in an upper tooth. This cannot be explained by the nature or quality of the food consumed; and it is all the more extraordinary because the partial destruction of the upper teeth would naturally predispose to the decay of those below.

The colour of the Tehuelches varies in different individuals. Indians of pure race have a blackish olive colour, which becomes more marked with the advance of years. In mixed breeds, there is observable a colour more clear, and like that of a European. This was conspicuous in a chief called Cosm Chingan, who described himself as the son of an Indian woman and an inhabitant of Carmen of Patagonia. Cosm Chingan measures about six feet, and prides himself on having a very little moustache, which Indians in general have not, having only a growth of down on the upper lip.

The men are generally strong, and sometimes graceful; the women are robust, gracious, and of beautiful form; but, with advancing years, they become positively ugly in appearance. There is never seen among these Indians any one crooked, handless, or a cripple.

The Tehuelches are very indolent about the necessities of life, but display much activity in connection with their pleasures, especially dancing, gambling, and drinking. Dancing is with them an important occupation, to which they resort in all the principal events of life. The passion for play is very great. After a fit of drunkenness, they will sit round the fire and play for their horses, their dogs, and even their arms.

The dress of these Indians is very peculiar. The clothes of the men consist of a chiripa, made of cotton or woollen, a plaid of guanaco skin, and sometimes a shirt, with loose drawers half a yard wide at the foot, which they buy at Pinta Arena, or in Carmen of Patagonia. They wear likewise a waistband decorated with silver, and a head-dress and boots made of horse-skin. The women usually wear a gown of woollen or cotton, without sleeves, which covers them from the shoulders to the ankles. At the top of this, in all seasons, is a cape of skin or of woollen cloth, which the rich women secure across the chest with a silver pin of ten or twelve centimetres in length. The other objects of decoration which make up the feminine dress consist of shining beads, hats made of straw, and silver earrings, which are worn likewise by men and boys. Both men and women paint their faces and their arms with ochre, sometimes black, which is said to protect the skin best from the solar rays and the dryness of the atmosphere; but chiefly red, which is most easily obtained.

The Tehuelches have a distinct language, which does not appear to have altered much for at least a century. Any little changes observable have arisen either from the change of conditions incident to all languages, from the sound of words as presented to the ear, or from the nationality of each traveller who took note of the language. They have no system of writing, and their traditions are very confused. Some old people say that in remote times their tribes consisted of many thousands; but a great deluge which covered the whole low lands had caused the destruction of multitudes, and the few who remained saved themselves by ascending the higher grounds. This tradition is interesting, referring, as it obviously does, though vaguely, to a great flood which has at one time destroyed a great part of the existing fauna. They have no religious symbols or ceremonies; but the custom of burying the dead in the position occupied by infants at the maternal bosom is thought to imply a belief in the dogma of the resurrection. They believe in the existence of a malignant spirit called Walichu, who alone causes all infirmities and misfortunes, and against whom they try to fortify themselves by means of sorcery. The 'Chouka Doctor,' to whom they resort, employs, for the alleviation of infirmities, certain vegetable remedies; but when these are not efficacious, efforts are directed to exorcise the evil spirit. With this object in view, they assemble the men and women of the tribe; then they shout and strike the tent where the sick person is, with the design, apparently, to frighten away the evil spirit. Sometimes the parents or friends of the patient leap on horseback and gallop off at full speed, by which means they assure themselves that the Walichu is left far behind.

The marriage ceremony among the Tehuelches is very simple: when a young man wishes to marry, and has in view any desirable young woman, he decorates his person with his finest clothes and with the best ornaments in his possession. Thus arrayed, he seeks an interview with the father, mother, or other nearest relatives of the damsel, to whom he offers some dogs or articles made of silver. Should his presents be accepted, the marriage is arranged and concluded. The newly married couple now live under the

same tent, where a ball is given on the day after the marriage. When night comes, the feast is concluded with a general round of drinking, if sufficient alcohol can be obtained.

Both men and women among the Tehuelches are great smokers. The pipes are made of wood, or stone, generally with silver or copper tubes, and are made by the people themselves.

Though indolent in habit, they are great hunters, and have numerous packs of mongrel greyhounds, the usefulness of which is so much appreciated, that for a young and swift dog they will pay as much as sixty dollars (twelve pounds), which may be in silver or in estimated articles, such as feathers or rugs of guanaco skin. When these Indians are not occupied with the chase or in breaking horses, they pass the time in lying with their faces downward, or in making saddles, boleadoras, and whips, or spurs, which they make of hard wood.

## OCCASIONAL NOTES.

### ANCIENT SYBARIS.

ALL lovers of classic archaeology will be pleased to learn that the Italian government has decided upon granting funds for the exploration and examination, by carefully conducted excavations, of the site of the ancient and interesting city of Sybaris, which, as is commonly believed, owed its ultimate decay and downfall to the excessive luxury of its citizens. They were once a really brave and warlike people, but degenerated into such effeminacy that they fell an easy prey to the inhabitants of the sister-town, Croton, the city of Pythagoras, by whom they were conquered, and the city utterly destroyed (B.C. 510) by turning the waters of the river Crathis so that they flowed over and covered the site. The city was situated in Lucania, in Italy, at the mouth of the river, on the Bay of Tarentum, the present Taranto, and was founded by a colony of Achæans. It soon became rich and powerful, and at one period had the command of four adjacent nations, of twenty-five important towns, and also of an army of three hundred thousand men. The circuit of the city walls is said to have been nearly seven miles in extent, and the immense suburbs covered a space of eight miles along the banks of the Crathis. Though often destroyed, Sybaris always seemed to have the power of rising from her ruins, to be rebuilt, and to become as powerful as ever, until finally destroyed by the Crotonians. The site of the ancient city having been determined by the French archaeologist M. Lenormant, no difficulty will arise on that head, and the excavations will be commenced shortly. A vast layer of earth, many feet in thickness, has accumulated over the ruins of Sybaris during the space of nearly two thousand four hundred years which have elapsed since its final destruction; and it is believed that the exploration of this mound of earth will be rewarded by the discovery of many objects of great interest, which perhaps may help to give a vivid picture of Hellenic manners, customs, and home-life at that far-off period. The site of the remains is situated near the railway station of Buffaloria, in the valley through which the river Crati now runs, and close to the town of Cassano,

situated on the western side of the Gulf of Taranto. The reports of the excavations will be anxiously looked for by all who feel an interest in this remarkable exploration, and it is to be hoped that the work will be carried out with energy.

### AN ECONOMICAL STEAM-BOILER.

The announcement in the *Times* that a new steam-boiler had been patented, the use of which would effect an economy of upwards of forty per cent. in the consumption of coal, has been followed by the exhibition at Millwall of a new furnace and steam-generator, for which its inventor, Mr T. Lishman, claims even more surprising results. Its chief features appear to be the total consumption of smoke, and the utilisation of the heat produced to the utmost possible extent before the gases are allowed to escape. A large number of gentlemen connected with shipping, engineering, and manufactures attended the inspection; and at a subsequent gathering, at which Mr J. C. Wakefield, of the firm of Inglis and Wakefield, Glasgow, presided, Mr Lishman explained the details of his invention, and stated that it had been practically tested at Sir William Armstrong's Elswick works and elsewhere, in comparison with the ordinary steam-boiler; and with a smaller consumption of fuel, had evaporated fourteen and three-quarter pounds of water for each pound of fuel consumed, as against an evaporation of eight pounds in the ordinary boiler. The general result of the tests was to show that the new apparatus would effect a saving of from fifty to seventy-five per cent. in the consumption of fuel, while its complete combustion of smoke would render chimney-shafts unnecessary. It is intended to fit up one of the generators in Messrs Inglis and Wakefield's works, and its practical working will be watched with the greatest interest.

### THE HEART SHALL FIND ITS EDEN YET.

FULL many a day which darkly dawns  
And shadows forth a world of cares,  
With sudden light grows clear and bright,  
And Noon a sun-gold crownlet wears.  
Thus shall it be with eyes tear-wet,  
The heart shall find its Eden yet.

Come shine or shade, come joy or woe,  
To cheer or sadden fleeting hours,  
A little while and life shall smile,  
And all the earth be decked with flowers.

For all who on this weeping earth  
Grow old beneath the toil and pain,  
At night or noon, or late or soon,  
Shall find the heart grow young again.

The brightest hours are still to come,  
The fairest days, the noblest years;  
For shining skies and sunny eyes  
Shall bid a long farewell to tears:  
Through Love's bright gates wide open set,  
The heart shall find its Eden yet.

## AFTER THE CALM.

As the mist deepens day by day, less diaphanous in the mornings, and the hills are hidden, a wondrous silence everywhere—a change is going on, like a stream rising imperceptibly. There is a fresh touch of crispness in the air at nights; and occasionally, if you look towards the north-west, you can feel a passing breath on your face, as if some one had breathed upon it. Very late in the evenings, listening intently, there is a far-off sound, a moaning in the pines before the coming storm. A gentle movement in the ivy ruffles every shining leaf, but only for a moment ere it has gone. Presently, there comes another rush, more violent than the last—a shower of leaves flutter in the air, a boom across the valley resembling a rushing wind in the sea-caves, a dash of cold spray upon the casement—then silence deep, insensate as the grave. In your troubled dreams you seem to hear the uneven din of conflict, the hollow thud of mighty rain; and, as morning struggles through, the mists have rolled away, a drenching, blinding rain obscures the distant hills, the forest has rocked before the gale—the Equinox has come.

Under the dripping hedgerows next the covert side, a running stream fills every ditch, where the sodden leaves lie thickening before the wind, as they come down in whirling showers from the elms, bare at the summit now, like a ship half dismantled of her swelling canvas. On the sloping lawn, but yesterday hard and smooth, small heaps of earth arise where the worms have been at work; countless leaves wedged in tiny crevices, as if they had been planted there, seem to disappear before the observer's eye, drawn down into a million subterranean passages, to fertilise next spring's pasture. Every infinitesimal mound thrown up round the bare roots of the sward comes up to make a top-dressing, more nutritious than the most life-giving manure, acting at the same time as a drain. Without a sound or semblance of life visible, millions of earthworms in this out-pasture toil on night and day, draining

and fructifying, without fee or reward, changing every spring and autumn the character of the soil; drawing down in leaves and decaying vegetation the richest plant-food, and exuding a wealth of matter such as no science can supply. And all this infinite and necessary labour accomplished unseen, unaided, save by that instinct granted so mercifully by the great Architect himself.

Are there voices in the gale, or is it that 'the sightless couriers of the air' fan the sleeping flame of imagination? There is a steady roar in the great wood, changed almost out of recognition since yesterday, like the din of some great conflict, an angry boom high up in the rocking branches beaten by the rain. There is no doubt of this majestic wrath, something awe-inspiring, almost terrible, in its belching thunder. It comes rushing past overhead with a swift motion, as of an aerial squadron of cavalry sweeping on to a solid phalanx of expectant soldiery; the sharp shrill screams might pass for a flight of bullets whirling by. But if there be no hidden message in the wind, we can read something in the hoarse trumpet-calls—the victory of the gale in the fight, renewed with the red rising of the sun; a triumph over nature. First the leaves turn to glowing colours, then fall, and reveal branches bare, like a useless fleet of ships in dock. We can read in the dismal moan the tale of leaden skies, where the heavenly sluices are drawn up to the deluge; of long bleak nights under the cold moon; of the wind whistling mournfully outside the casements, and the great wood lying under a white pall. Day by day the issue of the conflict becomes clearer, till the final consummation is attained. There is something inexpressibly sad in the last shower of falling leaves, the last wild wheel of the swallow as he poises his flashing wings, and turns his sunny back to cold northern skies and the mad north-western gale.

The deep red fallow, where only yesterday the dry clods ground under foot like powder, holds rain-water in the hollows; the plough has been dragged out from its bed of nettles and dock-leaves under the hedge, its share pointed to the

furrows. Guiding the handles, a stalwart countryman lounges along, with many a blithe whistle and droning admonition to his team, tearing up the earth into long even ridges, thrown over smoothly, as if cut by a knife. Close behind, in grave procession, a colony of rooks follows, making little noise, for this is a strictly business matter with them, and the feeding is rich and varied. The sheep-dog, following the furrows, turns occasionally and scatters these sable visitors, till they rise and wheel in wide gyrations, with tail feathers spread, bearing up against the wind. They do not rise with a swift, sudden motion—no rook ever does—but hop solemnly three times before their pinions bear them upwards. There is an angry chatter borne down the breast of the gale; they drop down again one by one in a long string, following up the plough. The ploughman holds the guiding lines upon the handles of his plough, as he heels over against the stubble, much as a cyclist sways with his machine round a sharp curve. There are furrows at equal distances to check the evenness, straight as an arrow from hedge to hedge—marvellously true.

Suddenly, in the din and roar, a quick flash of light breaks through the clouds in the north-west, a brilliant ray of sunshine, as every cloud seems to melt away into an imperial blue. A great silence falls; you can hear the wind moaning away in the deepening distance; the forest trees no longer rock in the cradle of the gale—the leaves alone tremble and murmur. As the light shines down from above, every one of them seems transparent, a pale, yellow, reluctant glow faintly tinged with pink; the eating chestnut a deeper brown; the Spanish chestnut more opalescent. Between two belts of larch, the trunks shining like silver, is a long stretch of bracken, breast high, and tinted with a wild array of fantastic colouring; some of the fronds a golden yellow, splashed with red, and mottled in the greater leaves; another spray a faint cream, again with the subtle presence of pink, a tint which is more suggested to the mind than seen. Looking down the opening, filled with this soft nebulous fire, the eye is conscious of a thousand gradations of mordant emblazoning. Perhaps there are actually but three at most to which art could give a name, though in this distemper, this carnival of gorgeous staining, a practical analysis of dyes could see nothing but a poor achromatism; but it comes, meteoric to the eye, as the most brilliant dyes come from the blackest coal-tar. It is a self-luminosity, a phosphorescent glow, the clearer for the rain and sunshine. Over it the ash-wands arise, and round them a delicate tracery of brambles; dogrose with dull red berries, a faint bloom upon them, in contrast to the wild-grape fruit, glowing out of their golden setting like a priceless carbuncle. Here, underneath, is a graceful weed with a long stem, milky white upon the one side, purple on the other, with leaves shaped like a rose; a washed-out cream, opal blue on the edges, and barred in every delicate vein with the bloomy blue of an Orleans plum; only a wild woodland weed, to which one cannot give a name; yet the dew and rain and morning sun have beautified it as if it had been some priceless flower. It is like walking through a glowing furnace, a painless fire filled round and overhead with autumn gold; every flicker of the leaves a lambent flame, every

bending wand an ignis-fatuus, an aurora of its own creation; a yellow furnace with the cardinal colours in the fire, a faint rubescence rubifying to the eyes, mantling and changing in its wondrous phantasmagoria. Words fail, while the senses are lifted up and glorified.

But the fresh-born silence is rudely broken by the tramp of many feet, a wild holla, and strange calls as the beaters force their way through the dense undergrowth. Almost at their feet, a brilliant meteor arises, and with a peculiar corkscrew flight, whirls over the oaks to the drives where the guns are standing. Down the wind he comes, with drum and whistle; a hidden voice cries 'Maark!' as he flashes over the brief opening; bang! go the guns, and down straight pitches the beautiful bird, crash into a thicket, followed by the dogs. The old retriever has him. See how gently he takes the quarry in his mouth, with just one upward toss of his curly black head, to carry the bonny cock on the balance, so that not so much as a feather shall be disarranged. Down at our feet he lays him on the grass, a last year's bird in full plumage, as the tuft of saffron feathers, the wiry feathers above the tail, denote. What a radiant sheen is upon his neck, a bronze gold shading down the throat to a gorgeous purple, with the scarlet plush under the eyes. The woods are lofty here, and every bird clears them a veritable 'rocket' as they cross the line of fire in quick succession, amidst a constant fusillade from the guns, and strange cries from the beaters as they call to one another. But, fast as they come, the keenest shot in the country would be no match for most of them, for the sight is wonderfully short and the birds are high overhead. Presently, a lull comes, and looking down the drive, you may see a rabbit skip across, jumping as he reaches the open; and a frightened blackbird, with his shrill piping scream, standing up with his peculiar flirt of the tail and rapid dropping of the wings, which always denotes alarm in the 'stormcock,' as the village hinds call him. An old dog-fox, with a white tag to his brush, slinks across the drive stealthily, the very embodiment of vulpine grace, though his fur is wet and draggled, and the clay on his pads shows signs of a long marauding excursion. Like a snake in the grass comes a stoat, crawling close to the herbage—never, as is his wont, showing more of his lithe, long frame than is necessary for locomotion.

Since I stood, gun in hand, in this same spot a week ago, I note a wondrous change. There is a wild crab tree hard in front, against an ash sapling. Seven days since, the fruit was green and hard; the ash sapling a mass of leaves; now the apples peer down from the branches a ruddy red; the ash bears upon its poles but a scant handful of yellow mottled foliage. Since my last visit, the birds, driven in from the stubbles, have commenced to eat the berries. Here is a bush of wild-rose—not the pink-flushed rose with the yellow centre, but the white variety, with the smooth black stem, which blooms in July—though, strangely enough, the haws are wont to open sooner than that of the fairer and more delicate sister-flower. The haws are smaller, but dead ripe now; and on the bush opposite, every shining berry has been scooped out, only leaving the husk. Close

alongside is an ordinary dogrose bramble, the haws much larger, but as yet untouched; and if you gather one, you will note that on the under-side they are still pale yellow. Looking closely at the brier, they would appear to be uniformly red; it is only on the under side next the ground that the yellow gleam can be seen. But the birds know. A little to the right is a thorn-tree, its leaves burnt a deep brown; a vivid mass of berries, so that they seem to weigh down the branches. In a somewhat observant life, spent for the most part by mead and stream, and never for very long beyond 'the babble o' green fields,' I have never seen the berries as they are this year. The village hind by my side, with the recollection of more than one hard, cruel winter before him, sighs as I point out this profusion, and prophesies another winter like the last. 'When the A'mighty sends all them hips [berries], it ain't for nout,' he says. 'The birds do know. See how the starlings begin to forgather o' marnings. Did ye ever know them so early afore?' That God sent the berries to feed his feathered choir, and that, according to the berries, so will the winter be, my companion firmly believes. Perhaps he is right; his faith is not far wrong. He has a simple west-country face, and a clear ruminative eye; it is only when he walks that you see what a cripple he is from the hereditary rheumatism, perhaps accelerated by the cider he drinks in such quantities. Even the boys beating in the woods, fine healthy lads all of them, begin to show, by the stiffness in their knees, that the old curse is upon them. Truly, it is wonderful with what patience, hardship and want and pain can be borne by our labourer of the fields without complaint, and what a little it takes to gladden his simple soul.

We beat the woods in transverse sections, working higher as we do so, till we reach the summit. The brightness of the afternoon holds good, though, occasionally, a long gust of wind tears over the oaks above. Before and behind, all round, can be heard a constant fire from the guns, as if an enemy's skirmishers had invaded the thickets: in one sheltered corner a dog sits up with lolling tongue and panting sides; close by, an empty stone jar against a huddled heap of shining plumage, the silver fur of the rabbits, no longer a warm brown, and the opal tints of the wood-pigeons. Up on the summit is an open field of turnips, which we cross in a serried line, driving the pheasants before us towards a dark belt of pines, where there is a mournful murmur, though the blazing woods lie peacefully still. As the line wheels round, facing downwards, there presents itself such a smiling panorama as is seldom seen. Right in front, belted on three sides by the forest, lies a noble house with down-trending lawns; behind, hills rise; and away in the uttermost distance, a sharp craggy peak—a misty glimpse of the Cleve Hills; sharp to the left, the Black Mountains, ridged and furrowed with white lines, which lines are nothing else but snow. Along the centre of the range, a storm is raging—a heavy white cloud, black as ink at the base, as it sweeps grandly along; before it is a dark shadow; behind, following in its track, the sun lightens crag

after crag, even to the valley below us, as the shadows pass across the open champaign. Far to the right rise the Malvern range; and apparently almost at their feet, so deceptive is distance, the cathedral tower and church pinnacles of Hereford shoot up like gray needles in the clear air. The pines murmur behind; the light beyond shines dimly through the purple haze there always is in the pinewoods, where the ground ashes and underwood are cut, and piles of fagots stand; where we walk upon sweet, fresh, smelling cones, and woodchips ankle deep. A fragment from the great storm upon the mountains yonder has been torn away, and come rushing across the valley, blotting out wood and pasture, where the dogs are driving the sheep home, and the distant ploughmen crawl like pigmies. Overhead, the firs toss and moan; a touch of sleet strikes coldly on the face, and everything is lost in the drenching blast. Presently, the light struggles through again, the thunder of the rain ceases, and the colours seem to have brightened, as under a new varnish marvellously prepared.

In these pinewoods, filled with the blue haze, trunks where the trees have once been 'felled,' have rotted, and thrown up a new vegetable growth—giant fungi with a covering like leather in toughness and texture, some of them soft to the touch and large as a lady's umbrella; others with a fibre strong enough to resist a stout blow. They are much finer in quality than those grown in the open, but they derive no warmth from the sunshine, so they lack the belted zones and vividness of colour peculiar to their fellows of the fields. In the semi-darkness, the birds fly over our heads untouched—there is no light to shoot. From the boundary-line of the firs, down nearly a quarter of a mile below, is a natural avenue, formed of hazel wands and trailing verdure; a green alley, filled with a dim semi-tone of refracted light, almost like a visible darkness. Against this is the outer boundary of the woods, where we take our stand in an orchard for a final battue. Here, by reason of its being a shaded hollow, perhaps, the grass is green; the apple boughs still lie under their russet coat; the fruit gleams gold and waxen, streaked and varnished red against the background. Some fern-leaves, the fronds hardly yet uncurled, peer out of the hedgerows; a late harebell or two, and some blue dog-violets without smell or fragrance. Against the wood, a belt of gleaming holly shines, every leaf lustrous, a prodigal waste of berries like points of sealing-wax against the everlasting though sombre green. It is getting dark now; there is a salmon-hued flush in the west, where the sun shines over the dismantled tree-tops; but the loud whirl of pinions tells us where the birds are, as they slide out of cover into the open on wings of wind. There is a quivering hum in the air, the hollow grate a pheasant's wings will make as they come sailing over one by one; a quick bang, bang, bang! in this warm corner, a puff of feathers falling like coloured snow, till, presently, a beater's head appears behind the hollies, and the last untouched bird goes humming, with his whistle going, across the apple trees. A few pigeons wheel in and out; a few more shots are fired; the keeper's whistle sounds by the woodman's cottage, answered by many

shrill signals; the dogs throw themselves upon their haunches; one by one we fall in together. A goodly heap of slain—twenty brace of pheasants, a half-score of rabbits, and a leash of pigeons; and as yet the burnt foliage is on the trees, the oaks are thick with leaves, and the larches form a cover almost impenetrable. Velvetens is satisfied.

As night drops upon us like a pall, there is no mist coming up from the east as the sea-fog rolls in with the tide; no promise of hazy mornings any more, with the sun-tinted mirage of the afternoons. The wind dies in short puffs; a keen shrewd air blowing the haze away, and disclosing, with a gradually increasing complement, a million frosty stars. You can feel the frost upon cheek and brow; but no man should venture to say what of the morrow, for it might vary from one more touch of Indian summer, a day of infinite calm in the blazing woods, and sunshine in the hollows; or, again, there might be the thundering blast of the morning, with the sheeted rain like a liquid wall on the fallows, and the gulls driven landward from the sea. Then shall the conflagration of the woods have burnt to the last fibre, and the red flush die to ashes, the sombre livery of a turgid December gray. But to-day they burn with a luminous shine; and the apple-racks are waiting for the ripening fruit. But a nation has died in a day before this, and nature only dies for a season; so long as her forehead is wreathed with the grape, and her face ruddy with harvest promise, we care not to see the yellow rottenness of the side which faces farthest from the generous sun.

## RICHARD CABLE,

### THE LIGHTSHIPMAN.

#### CHAPTER LVII.—THE FOUNDATION.

RICHARD CABLE scarcely slept all night. He thought of many things. He thought of what he had seen and overheard at Pentargon. He saw in the darkness the arms of his child round the neck, interlaced with the hair, of Josephine, her head tied up in his blue, white-spotted kerchief, lying on her shoulder, looking up into the pale face of her nurse, with a soul of love and forgiveness streaming out of those blue eyes. But he thought of something beside—of the plan he had made for Mary; and he was by no means sure that she would be well content with the arrangement. One circumstance had, however, occurred to make his way easier. When a young man has been refused, his self-love receives a wound more severe than his heart, and he is then impelled to do some act which will retrieve his lost self-respect. A man who has been refused, or jilted, is ready to propose to the next girl he sees; and no sooner was Walter Penrose aware that his suit for Mary Cable was unacceptable, than he offered himself to Sarah Jones. He did not care particularly for Sarah; but he did not choose to have it thought in the place that he was a rejected lover; and he did not choose

that the Cables should consider him as insoluble. As this engagement was hurried, the wedding was also hurried; Sarah Jones had no desire to let Walter slip through her fingers by delay, and Walter wished to have his fate settled irrevocably as speedily as possible, out of defiance to the Cables, who had slighted his pretensions.

After breakfast one morning, Richard Cable said to Mary: 'Child, when you have cleared away, come to me into the summer-house; I have a word to say to you of some importance.'

'Father, I hear the bishop arrives to-morrow.'

'Yes; but I am not going to speak to you about the bishop.'

'And the confirmation is on Friday.'

'Yes; I suppose so; but that is not the matter.'

He saw her and Martha exchange looks. Martha put up her lip and looked sulky. Martha had inherited her father's stubbornness. She and Mary clung to each other, as the twins who intervened between Mary and her were fast friends and inseparable. Martha looked up to Mary with passionate love, regarded her as the most beautiful and perfect girl in the world; fought her battles, resented every slight shown her, or supposed slight, as she would bridle with pride and pleasure at every acknowledgment of her sister's excellence.

Cable went to his summer-house and smoked a pipe. Before he had finished it, he heard a timid foot on the gravel, and in another moment Mary stood in the open door.

'Come in,' said Cable.—'What is the matter? Upset because you have broken a plate? Bah! Fourpence will set that to rights.—Come inside, Mary dear; I must have a serious word with you.'

She entered, trembling, and with changing colour, changing as fast as the flushes in the evening clouds. Tears sparkled on her eyelashes, as raindrops on fern-leaves in the hedges at morn.

'What is the matter, child? Why are you frightened? Your father will never do anything to displease you. You can rely on that. His whole care is for your happiness, and it is for your happiness that he is now arranging.'

She raised her blue eyes; they were swimming with tears, so full of tears that he could not read through the watery veil what they said. He could not say for a moment any more. His pipe did not draw as it should; he unscrewed it and blew through the nozzle. His blood throbbled in his temples. He was vexed with his mother because she had refused to speak to Mary about his purpose, and relieve him of the irksome obligation. 'Mary,' he said, after a long pause, during which she stood before him with folded hands and lowered eyes.—'Mary, I suppose you have formed a rough guess what my business is with you?'

She made no answer with her lips. Had he looked up, he might have read the reply in the pain-twitching lips of his child and in her shifting colour.

'Can you give a guess at what I have to say?'

Then she held up her head, looked full through her tears in her father's face, and answered: 'Yes,

dear father, I know—I can guess what you want to—to say. But—O father! father dearest—spare me this time—do not say it.

‘Spare you this time?’ echoed Cable. ‘What is the meaning of these words? When have I not been considerate and kind to you—to you above the rest?’

No answer.

He waited; but as he received no reply, without looking in her face, he began again: ‘Mary.’

‘Father,’ she said, ‘let me’— But her voice failed her, and she put her hands over her eyes.

‘You do not know what is good for you, my child,’ he said. ‘You are indeed still very young, scarcely eighteen, and yet— But never mind; your mother was married early. If I have doubted for a moment whether I acted rightly on a former occasion, my doubts have vanished to-day. That young fellow, who once took a fancy to you, is now— Hark!’

At that moment the bells of the parish church began a glad peal. The wedding service was over that united Walter Penrose with Sarah Jones, and the ringers were sending the welcome from the church tower.

Then Mary raised her hands, clasped them over her head, uttering a piercing cry, and sank at her father’s feet: ‘Father! O my father! you have killed me!’

Cable caught her, and tried to raise her; but she twisted herself from his hands, and on her knees staggered round the summer-house, clasping her ears, to shut out the reverberation of the wedding bells.

Cable went after her; he caught her in his arms and held her; but she slipped down on the floor again and lay her length on it, beating the floor with her head, as one mad, and then scrambling up on her knees and throwing herself in a heap in the corner. ‘O father! my father!’ she cried, ‘this is your doing! Walter does not love any one but me; and I—I love, and can love none other. I shall never, never marry now! You have made me miserable—you have broken my heart.’

Richard Cable was as a man turned to stone. He could not speak; he tried, but his voice failed. He put his hand to his brow, and a deep groan escaped his breast. All at once he stood up; he could not breathe in the summer-house. He was stunned by the reverberation of those St Kerian bells, beating in upon his brain, from all the eight sides of his wooden house. He left Mary kneeling on the ground; he rushed forth. He opened his gate and hobbled down the road. He could not bear to face his children. He did not feel the ground under his feet; he was like a dreamer, falling, falling, touching nothing. The birds sang in the bushes, the holly leaves reflected the sun from their shining leaves on the hedge. Everything swam about him. He could not run because of his thigh, and he had not his stick, so he went painfully, lurching like a drunken man. He had pierced his best loved daughter’s heart; he had robbed her of her happiness, alienated her from him for ever—he had laid the foundation in his first-born.

Whither was he going? He did not know himself. He wanted to be away from Red Windows, somewhere out of the sound of Mary’s

sobs, away from the reproachful eyes of her sisters; somewhere where he might be alone in his misery. There was one spot to which instinctively he gravitated—the old cob cottage. He did not consider that it had been given up to Josephine, or if he thought of that, he remembered she was away, and that, though she dwelt in it, it was now vacant. He did not rest till he reached it. The key was kept in the same secret place, the hole in the thatch, and when he put his hand there, he found the key. He opened the door and went in. He did not look about him; he saw the old armchair in the old place, and the table and the seven stools. The hearth was cold; the room was still, only a few flies humming in it. There were a few trifles that belonged to Josephine on the chimney-shelf and on the table; and to a crook in the ceiling hung a bunch of pink everlasting, head downward. He threw himself into the old chair and folded his arms on his knees, and laid his head on his arms and wept.

How long he sat there he did not know; thoughts hot as molten metal flowed white and glaring through his brain. Had he been happy in Red Windows? Was he not more miserable in his wealth than he had been in his poverty? What had his money done for him but steal his children’s hearts from him, and seal up his perception of what was for their welfare? There, round the table, were the stools of his children, on which they had sat as little things and eaten their frugal meals. How much better they had tasted seasoned with love, than the richer repasts at Red Windows strewn with verjuice.

Those bells! Those wedding bells were still ringing! Oh, what a happy day for him, had they rung for Mary’s wedding! How content he might have been with her down in St Kerian, near the smithy. Then every day he would have strolled into the village to see her and talk with the smith, his son-in-law. Now that was over. Mary’s heart was broken. The bright future of the dearest being he loved had been dashed to pieces by his hand. Could she ever forgive him—him who had spoiled her entire future, blighted her whole life? How could he live in the same house with her whose happiness he had wrecked?

Then he remembered what he had witnessed on the cliff behind the *Magpie*—he saw again the little head bound up in his blue kerchief, resting on Josephine’s shoulder, looking up into her face, and saying: ‘I am glad it was you, and I love you a thousand times better!’

O wondrous beauty of forgiveness! St Luke’s summer in the moral world, when a soft glory illumines the fading leaves and drooping vegetation, and makes the touch of decay and death seem the touch of perfect loveliness.

What was the worm at the root of all Cable’s happiness, that which had robbed all his successes of satisfaction? Was it not the bitterness with which he had thought of Josephine, the savage determination with which he had stamped out every spark of relenting love that had for a moment twinkled in his gloomy heart?

As he thus thought, he groaned. Then, suddenly, he was roused and touched by a hand. He looked up, bewildered. Jacob Corye the inn-keeper stood before him with agitated, mottled face.

'You've heard it? It is true! We are all done for.'

Cable could not collect his senses at first.

'I came over at once, the moment the news reached me. I went up to Red Windows. Then I heard you had gone down lane. Some one saw you come on here. I followed.—Is it true? Tell me what you have heard. My God! this is frightful!'

'I do not understand you.'

'The Duchy Bank has failed—stopped payment. I had three thousand five hundred pounds in it. And you?'

'Everything,' answered Cable.

'Just heard it. Could hardly believe it. I came over here. It is a frightful loss to me. Three thousand five hundred pounds! Why, I can never start the *Champagne Air Hotel*.'

'It is my ruin,' said Cable. 'I owe money for Red Windows, and I have put my savings into shares in the bank as portions for my girls.' He put his hands over his brow and laughed fiercely. 'Naked came I into the world, and naked I shall go out. The Lord gave, and the Lord hath taken away; but I cannot and I will not say, Blessed be the name of the Lord.'

'Three thousand five hundred pounds!' groaned Corye. 'That takes pints of blood out of one's veins.'

'I am bled to death,' said Cable.

'Look here! What will become of Red Windows?'

'It will be sold over my head. I have not paid off; and I am a shareholder.'

'You have everything in the bank?'

'Every penny.'

'Look here, Uncle Dick,' said Corye. 'Under these circumstances, we must give up the *Champagne Air Hotel*.'

'Yes.'

'And we must think no more of mating my Joshua and your Mary.'

'That is past,' said Cable.

'Three thousand five hundred pounds!' groaned Jacob. 'Well, I pity you. I can feel. I am cruel badly bitten.' Then he went away.

Richard Cable remained in the same position and in the same place. He did not return to Red Windows for his dinner. He sat, stunned with despair, rocking himself in his armchair, looking upon the white ashes of his first life, and the ashes of his second life. His first ambition had been realised, and had turned to dust when he grasped it. The second had been realised, and had failed him also. What was done could not be undone. He must return with his daughters to the poor cob cottage. The wealth was gone as a dream—not a happy dream—a dream of disappointed ambition, of pride unsatisfied. It would have been better for him and his children if he had never left his stone-breaking, never separated himself from them. That episode of prosperity, like the episode of marriage with Josephine, had done nothing for him except unfit him for the life he had been accustomed to lead. He felt inclined in his misery to take his stone-breaker's hammer and break his daughters' hearts with it, one after another, and then die himself. Red Windows must be abandoned, and they must all accommodate themselves as best they could to the cottage, and cultivate again

the three-cornered garden; and he must go along his rounds with the van of calves and droves of young stock, rebuilding slowly his broken-down fortune.

'Cursed be the day,' muttered Cable, 'that ever I dreamed that daring dream!'

His head was burning. He could not weep now; his eyes were fireballs. The fountain of tears in his heart was dry as an old cistern, and nothing lay at the bottom but grit and canker. One thing that embittered his misfortune most of all to him was the thought of how the St Kerian folk, whom he had held aloof from, would rejoice over his misfortune. Those who had now fawned on him in his prosperity would now turn their heel upon him. How Penrose the blacksmith that day would laugh over his ill-luck, and bless his stars that his Walter had escaped union with one whom misfortune followed! How Tregurtha, from whom he had purchased Summerlease, would rub his hands, and vow that the day had now come which he had long foretold, when Uncle Dick's pride would be brought low!

Then the strength of Richard Cable's character began to manifest itself again, as these galling visions presented themselves before him. It was true that he was a ruined man; but he had still the brains and the skill to make a new fortune by following the same course he had already pursued. As he began to think of the future, the present lost its intensity of bitterness. He felt that he still had in him sufficient energy to begin life for the third time; but he was shaken, and he could never hope to recover all that was now taken from him. There were other competitors stepping in where he had shown the way.

Whilst thus thinking, he heard the door open, and the blacksmith, Penrose, came in. 'Well, Uncle Dicky,' said the smith, 'what be this bad news I've heard? The Duchy Bank gone scatt [broken] and all your savings lost?'

Cable nodded and sighed.

'Bless me,' said Penrose, 'that's a bad lookout for you. Have you nothing laid by elsewhere?'

Cable shook his head.

'By the powers!' said the blacksmith, 'I'm mighty sorry for you. I've been at the wedding of my boy, and I'm only sorry he weren't spliced to the other one. Your Mary would have suited me better than Sarah Jones. But it was not to be; so let the past lie covered with leaves. Sarah Jones brings some money with her; but she has a shrewish temper, if what folks say be true. I'd rather have had your Mary without a penny than Sarah with all her brass.—But there! what is done is done, and to-day the parson has hammered them together on the anvil, and there'll be no parting after that, whether they agree or not. As for her sharp tongue, he must learn to put up with it and turn its point with gentleness.'

Cable sighed, and thought of his marriage with Josephine.

'Well, Uncle Dick,' continued Penrose, 'I've just seen Jacob Corye, who is badly hit. But he says you are worse bitten than he, and that there was nothing left for you and your maidens but the workhouse.'

Cable looked up, ironically, and said: 'No, not that.'

'No,' pursued the blacksmith; 'I knew it

could not be so bad as that. Still, I thought I'd come on and see.—Corye said you were here taking on dreadfully about your loss, and like to do yourself an injury. Then an idea came into my head; it flashed up like a spark on red-hot iron. I came on, and here I find you.'

'Yes,' said Cable, 'here you find me.' He was not angry with Penrose for his intrusion. He felt that it was kindly meant, and the sympathy of the blacksmith touched him.

'Now, harky' to me,' said the blacksmith, lowering his voice. 'I know you well enough—a straight man as ever was. I reckon I'm a straight man too; and where I'm crooked, may God Almighty hammer me out of my crookedness with the hammer of adversity, straight again! But there—I've come to say that I've a matter of a couple of hundred pounds lying idle—thank heaven, not in a bank, but in my old woman's nightcap, and stuffed up the chimney in our bedroom—all in gold, and you're heartily welcome to the loan of it as long as you like. You leave this door unlocked to-night, and I'll come along as if I were out to smoke, and blow off the drink I've had to take because of all the toasts and well-wishings, being my son's wedding day; and I'll come in here, nobody seeing, and I'll put the old woman's nightcap and its contents into thicky [yonder] oven, where you'll find it to-morrow morning, and nobody the wiser.—No words,' said Penrose, starting up. 'I reckon I hear steps coming. I'm wanted because the young people are off.'

Before Cable could recover his speech, for moved to the loss of words he was, Penrose was gone. At the same moment in came three other men, Tregurtha the farmer, Bonithon the saddler, and Hoskins the miller. Each looked at his fellow to speak. Tregurtha, nudged by the saddler and the miller, after a few ineffectual whispered remonstrances, came sheepishly forward. 'You're in the old nest again, Uncle Dicky,' he began, then coughed. 'Us three chaps were in the *Silver Bowl* just now, when Jacob Corye came, mighty took-on about the loss of his money through the break of the Duchy Bank. He told us as how you had lost everything—as you'd put all the fortune you had into the Duchy, and took it out of calves and bullocks. I reckon it were a mistake. Keep your money in flesh, say I. I once lost a power of money in law. I never went to law again after that. It taught me a lesson, and I've profited by it. That is why I've money now. You may lose a calf here or a cow there of milk-fever, or a horse with the glanders, or a pig with the measles—and talking of that, my wife's cruel bad wi' erysipelas—but you've other things to fall back on. It is not so with a bank; that's like the bridge in the nursery story, which when it bended, there the story ended. Well, old friend, we—that is, Ephraim Bonithon, and Tony Hoskins, and I, was very troubled when we heard you had got pixy-led in Queer Lane; so, when Corye was gone, we put our heads together. Now, us three—that's Tony Hoskins, and Ephraim Bonithon, and I—have all of us got money laid by, are warmish men in our way—the thermometer in us don't go down to zero. So we've come to say, if you want to get on in the cattle business and are pinched to start with again, we three—

that is to say, me, and Ephraim Bonithon, and Tony Hoskins—be ready to stand security for you to any sum in reason that you like to name.—And,' continued Tregurtha, 'don't you never go for to think and suppose of selling Red Windows. Us of St Kerian be proud of that house standing up above the town, and us shows it to the little uns as a visible lesson to 'em of what uprightness and energy and perseverance may perform. Moreover—and besides!—he took breath after this word—'us three men, the afore-in-mentioned Tony Hoskins, and me, and Ephraim Bonithon, can't abear to think of them seven shining and adorning beauties, your sweet maidens, God bless 'em! should not be housed in a nest worthy of such treasures. Then therefore and because'—another long breath—if the creditors dare to sell that there house over your head, then we three—that is, Ephraim Bonithon, Tony Hoskins, and I, say—confound their eyes! And we'll buy the house and make it over to you, to repay us as you earn the money.' Then he drew a long breath and said 'There!' and the other two drew the backs of their hands across their noses and grunted 'There!'

Then suddenly, panting, in the doorway stood little Lettice, who cried: 'O father! come, come quick! Who do you think is come to Red Windows? The bishop and Mrs Sellwood; and they say they are old friends of yours; and want to see you and us all—and are asking after little Bessie.—And,' after panting a while, 'the bishop has brought a to-day's paper from Launceston, and he says it's all a parcel of lies about the Duchy Bank; it's the other bank, the name I can't call to mind, is broken, and not the Duchy.'

Then Richard Cable held out his hands and clasped and shook those of Ephraim Bonithon, William Tregurtha, and Anthony Hoskins, shook and squeezed them, but said nothing; yet, as he hurried away, his body shook, and his breast heaved convulsively, and sounds issued from his mouth, that made Tregurtha say: 'By George, he is pleased—how he is laughing!'

But Lettice, looking up in her father's face as she ran at his side, asked: 'Papa, why are you crying?'

Then he said in a choking voice: 'Run, Lettice—run after Mr Corye, and tell him not to fail to send little Bessie and—her who is with Bessie, in his gig, to Red Windows, to-morrow.'

#### SALT-MANUFACTURE IN INDIA.

THE tax or duty on common salt, or what is chemically known as sodium chloride, forms not only one of the main sources of the revenue of British India, but the manufacture and sale of the commodity itself, constituting one of the great government monopolies, give work to thousands of both Europeans and natives, under a separate department of the State, embracing a comprehensive machinery for the supervision of the industry, and prevention of contraband practices throughout the country. The vast extent of coast-line, with extensive estuaries and connected lagoons carrying the briny fluid of the surrounding ocean far inland, the excessive heat and dry parching land—

winds that prevail during the summer months, lend special advantages to the manufacture of salt from sea-water by solar evaporation; and ordinary cultivation ceasing when it is sufficiently warm for salt-manufacture to commence, such native labour as is necessary for its actual manipulation is readily obtained at a very moderate cost, rendering the value of the manufactured article so trifling, that even with the additional percentage tacked on by the government before sale, all imports of it are easily kept out of the local markets.

The sites taken up by salt-works, chiefly barren wastes where nothing else will grow, are situated either close to the estuaries through which they draw their supplies of salt water direct from the sea during spring-tides, or on swamps largely impregnated with natural saline deposits, where pits being sunk, the necessary requirements are met by percolation in subsoil brine. The usual practice is to farm out such land, free of all rates, to suitable persons, who supply the labour, and manufacture the article under government superintendence, receiving in return a fixed rate per ton for all approved salt made by them and delivered into store within a given time.

The works, extending from fifty to a hundred acres in area, are divided into beds, varying in size from ten by fifteen to thirty feet or so square, partitioned off by irrigation channels, along which the water is passed from one to another, and small embankments a foot in height, the larger divisions being utilised as 'condensers,' or wide shallow expanses for evaporating purposes; while the smaller ones, more easily got at, are reserved for crystallising the salt in.

The system of manufacture in India differs considerably from that of other countries in the separation of the various saline ingredients held in solution in sea-water, the ordinary composition of the latter being about 96.5 per cent. of pure water to 3.5 per cent. of various salts, principally sodium chloride. Work commences soon after the cessation of the annual tropical rains or monsoon, all the beds being first flooded with salt water. Thus thoroughly saturated and cemented, they are then carefully levelled and hardened by being beaten down repeatedly with heavy oblong logs of wood, those intended for crystallising in being further closely stamped by the feet of the workers; and the surface soil of stiff clay soon becomes impermeable, and a day's exposure to the sun renders the beds fit for use.

The condensers being divided into three series, the first or primary lot are next filled with salt water to a depth of six inches, and left to evaporate, being added to from time to time for maintenance of the original depth; and as the liquid gains in specific gravity, or becomes denser, Baumé's hydrometer is applied, and the brine soon marks ten degrees of density, when it is passed on to a secondary set, those emptied being refilled. From the secondary set, the heavily laden

liquid is allowed to gravitate, in due course, into a third or finishing set of condensers. And on marking twenty-five degrees, the brine is ready for the crystallising beds; all organic matter and the less soluble salts held by the water in the first instance having been deposited on its way as evaporation progressed, and the only salts now held in suspension being sodium chloride (common salt), with a small quantity of magnesium sulphate (Epsom salts), and traces of inorganic matter, magnesium chloride and calcium (lime)—the process up to this stage taking about three weeks, the original density of sea-water by Baumé's hydrometer being 2.5 degrees, subsoil brine sometimes marking five degrees at start.

There are now two methods of allowing the formation and collection of common salt—the rapid and accretion systems. In the first, the 'saturated brine' from the finishing condensers is run in to the crystallising beds, where sodium chloride at once begins to separate from the liquid, and crystallises on the floor; and by the third day, under favourable circumstances, all the pure salt has been deposited in a white sheet of opaque crystals, and Epsom salts is ready to solidify, the hydrometer now showing thirty degrees of density, and the remaining liquor, called 'bitterns,' from its particularly acrid taste, containing hardly any perceptible trace of common salt. The salt formed on the floor is next gathered up with flat wooden rakes, drained, and stored; a further supply of saturated brine again passed into the crystallising beds, and the same process followed, till, after the third gathering or scraping, the bitterns is got rid of, and the crystallising beds remade as before; the same procedure, as far as they are concerned, gone through *ab initio*, till the annual rains again set in, the periods varying according to locality.

In the accretion system, the only difference is, that on the brine in the crystallising beds rising to thirty degrees, instead of removing the salt already formed, a fresh supply of saturated brine is let in over it every third day or so for three weeks, the salt allowed to form in layers to the thickness of from three to six inches, and then removed by the hand, the bitterns being subsequently run off and the beds remade as before. In some works, the salt is raked through as it forms, and turned out in hard half-inch opaque cubes. Though of a better quality, it does not generally meet with much demand.

In addition to works proper, such as the above, shallow lakes with loamy or clay beds, communicating with the sea at spring-tides, are also utilised for salt formation. The lake being filled early in the season, the water is left to evaporate, and the various salts allowed to separate in layers; and on the remaining liquid rising to thirty degrees of density by Baumé's hydrometer, the top layer, or that of common salt, is dug out with pick and spade. This can hardly be

called manufacture, though it must be admitted that, requiring less labour and trouble, it naturally recommends itself; but then it must be remembered that facilities for this mode of making salt are not everywhere to be found, and one of the two systems of manufacture has to be resorted to where other difficulties are not present.

Much might be said of the relative advantages of either system; but the outturn of salt from a given area under each being about the same, and owing to the anomaly of the salt being sold by the government in weight and retailed in measure by the dealers, the salt showing most bulk is more sought after; and in the rapid system, this purpose is answered, as, not being allowed sufficient time to thoroughly crystallise, or being, so to speak, forced, the cubes of salt are imperfectly formed and hollow. As it takes a larger quantity to make up an equal weight, and the general Indian consumer not being particular as to quality so long as it is made up in quantity, the rapid system is consequently more in vogue.

On the eastern coast, the manufactured article is next stored on raised platforms in pyramidal heaps of about 132·25 tons each, covered over for protection from damp and rain with twelve inches of clay or thatch; while on the western coast, the annual rains being heavier, rough water-tight sheds are used instead, from which the daily sales are made as required.

The average labour required is one man per acre of land under manufacture for six months, the outturn of salt from the same area being about seventy-two tons per annum, costing when stored about 4s. 4½d. per ton, and sold by the government at 7s. 9½d., plus a duty, which varies generally as the Indian budget shows a surplus or deficit, and is at present fixed at £3, 2s. 6½d. per ton. (The rupee is calculated at 1s. 6d.) To this of course have to be added the dealer's profit and cost of carriage, which very considerably enhance its value to the consumer, especially in the interior.

The heavy duty on this important necessary to health, and therefore of life, constitutes one of the great grievances of the poorer classes, who, with salt forming spontaneously in the estuaries at their very doors, or easily separated from the soil round their houses, consider it, and not without some reason, specially unjust that they are not permitted to help themselves from nature's supplies, and so have recourse to every means of avoiding the duty, necessitating the employment of a large preventive agency to protect the revenue.

The imposition of the duty is defended as being the only direct tax that touches all classes, and the only tribute paid by the poorer section, or the masses generally, for the many advantages the better-to-do orders pay for in the various assessments imposed upon them. But the justice of taxing such a commodity is of course open to very grave question. Not only does salt answer the greater uses required of it, but from it are made, either in the rough crystalline formation or in a more alabaster-like style, the much-admired ornamental crosses, trays, and vases, samples of which were to be seen in the Indian Court of the Indian and Colonial Exhibition. Once made, the articles are easily coloured or

polished, but of course, being of such deliquescent material, are soon affected by the weather, and have to be kept perfectly free from damp or other moisture.

## THE OLD SECRETAIRE.

A CHRISTMAS STORY.

### CHAPTER III.

LIKE most men of his profession, Warren was a keen observer of character; a mystery delighted him equally from a business or an analytical point of view. Here, then, were all the elements for a seasonable romance—a Haunted Chamber; a mysterious servitor of the good old orthodox type, moreover the only living historian of the tragedy—a trusted servant, who had actually a personal acquaintance, so to speak, with Edgar Warren, and who alone—Warren was sure of that—could solve a dark and blood-stained catastrophe.

Morning broke with snow knee-deep in the drive, huge drifts half-way up the windows, and no prospect of any outdoor amusement. Even the rural postman had not succeeded in forcing his way through. It was, as Constance Lumley observed, when the parliament had gathered round the hall fire, a Christmas evidently to be spent quite magazine-artificially. With nothing whatever to do, and no immediate prospect of amusement, conversation began to languish, till one of the party entered with the startling news that the ghost-light had been seen burning in the haunted wing all the previous night. Thereupon, the listeners began to thrill, and a new zest was given to the flagging flow of talk.

'Christmas Eve, the anniversary of the tragedy,' Ada Secretan exclaimed. 'I had forgotten that. To-night, the ghost walks, rapier in hand, down the dusky passage. Shall we interview him?'

But in spite of nineteenth-century civilisation and the boldness of numbers and daylight, there was no enthusiastic response to this appeal, for each looked at his neighbour, waiting for him to speak.

'Haunted Chamber or not, this is the very morning to explore those old rooms,' Walter Secretan remarked. 'What do you say to us all going?—only you girls had better put on some wraps, for it is sure to be dirty enough. Those in favour of my motion, please hold up their hands.'

Immediately, a host of fair fingers were extended; and the proposal being carried *nem. con.*, the ladies trooped away to prepare themselves for the coming excursion. As they began to reappear one by one, cloaked and hooded, Warren and Walter Secretan returned in rough laced jackets, bearing between them a gigantic bunch of rusty keys, a small but powerful crowbar, and a dark-lantern.

A short walk along a broad flagged passage brought the sightseers to a flight of steps surmounted by a wide oak door, fitted with long iron hinges, rusty and timeworn, but still forming a powerful barrier against intruders. After some difficulty, a key was found to fit, and the creaking lock forced back by the united strength of Secretan and Warren. The bolts were drawn; but the great iron hinges held, till the crowbar being brought into requisition, finally the great

door flew open with a sullen bang that seemed to re-echo moodily down the dim reverberating passages.

A low corridor was before them, hung with ancient tapestry, torn and moth-eaten, and swaying in ghostly fashion before the cold air. Thick dust lay upon the tiled floor, deadening the sound of footsteps. Still the light of the lantern was enough to guide their somewhat hesitating steps, till at length a hall was reached, in the centre of which was a noble staircase, lighted from the roof by a glass dome, though the accumulated dust of more than half a century made daylight dim and pallid. Here every step echoed loudly; every vibration of the voice seemed to ring as if the place was filled with mocking spirits. With some difficulty they flung back the ponderous iron-lined shutters, and a stream of light poured in. There were rusty-armour figures in dim corners; pictures peeling slowly from their panels on the walls; a colony of rats scudded noisily across the floor under the rotting wainscot. There were three rooms leading out of the hall, the doors of which they had no difficulty in opening—rooms in which old oak furniture had been placed, though the damask had mouldered and left the frames bare. There was nothing of interest in any of these apartments, save one or two curious ornaments; and upon one dusty table, a pack of cards lay strewn, with a decanter and glass, the former containing a pungent sediment.

Up-stairs was a long corridor containing many rooms, all of which they explored; and here the girls found themselves in their element. There were wardrobes and huge linen-chests containing lace in abundance; tarnished silver buckles and rich brocades; lutestrings stiff as cardboard; a rich treasure of silk and velvet enough, more than enough, of dresses from the time of the 'merrie monarch' downwards, to furnish material for a hundred ancient comedies. The fair bevy of connoisseurs drew a breath of mingled delight and envy, when this rich harvest had been gathered into a shimmering heap.

They had drawn apart by ones and twos, each of the party pouring over some newly discovered treasure, as the boxes were turned out promiscuously on the floor. Point-lace collars and paste buckles, a heavy garnet signet ring, some delicate cameos, silken hose, and claret-coloured full-bottomed coats slashed with silk—every article of clothing affected by a lost generation was there.

'You don't deserve a shred of these beautiful things, Ada,' exclaimed Althea Wynne, drawing a long breath of unalloyed admiration. 'Fancy allowing all these treasures to moulder here for years and years!'

'O'er all, there hung the shadow of a fear,' Warren quoted.—'Miss Wynne, I am afraid you are a Radical—you cannot understand the reverence due to one's ancestors.—And now, confess, Miss Secretan, have you not been just a little afraid to ransack these sacred apartments?'

'A little, perhaps,' Ada confessed. 'I almost feel guilty of sacrilege now. What do you say to carrying our spoils away? I think we have done enough.'

'Without invading the sanctity of the ghostly chamber!' cried Miss Lumley. 'Perish the thought!—Mr Secretan, lead the way!'

But here the first difficulty arose. No one

knew sufficiently the geography of the rooms, to point out the mystic apartment. All Secretan knew was, that the chamber looked out upon a green courtyard facing the east wing, and that it was lighted by an oriel window. At the end of the corridor the explorers found another room facing them, which, after a little cogitation and some speculation as to their exact latitude, Warren declared must be the place of their search. To their surprise, they found this door barred with iron let into the solid masonry, so strongly, indeed, that half an hour's exertion at least was required before they could wrench away sufficient of the barriers to try the key. At this critical moment, swift footsteps came unheeded towards the eager group, and Warren felt himself dashed aside with a force scarcely credible in the feeble frame of the intruder. 'Hold, hold, I say! Have you no reverence for the dead?'

Silas Brookes was standing with his back to the door, a flashing rapier in his hand. He seemed to have thrown off half a century of years; his figure, no longer bent and halting, was drawn up to its full height; a bright colour gave an air of youth to the shrivelled cheek; his keen eyes flashed with all the fire and brilliancy of perfect manhood. For a few moments the group started back in some alarm, and not a little fright amongst the girls, who clung to each other in unaffected fear.

'What is the meaning of this folly?' Secretan demanded, the first to recover himself. 'Brookes, you forget yourself. Go back into the house immediately, or we shall know how to treat you. You are alarming the ladies by this conduct.'

But the words might have fallen on ears of stone. The old man stood with one hand behind him, as if protecting some unseen treasure, the other held forward the rapier, prepared to pierce the first intruder.

'Shall we make a rush for him?' Warren whispered, his blood up by this time. 'We could easily overpower him between us.'

'Think of the girls,' Secretan replied between his teeth. 'I am afraid we shall have to beat an ignominious retreat. Confound it! this comes of keeping a madman on the premises; and yet I don't like to give in.'

Warren for reply was about to advocate extreme measures, when a happy thought struck him. After all, the situation had its ludicrous aspect; but he was too intent on his new plan to see this now. He whispered a few words in his friend's ear to the effect that he was to get the party away, and leave him to face the strange custodian of the Haunted Chamber.

'You have some scheme in your head?' Walter asked.

Warren nodded. He had a scheme, though it had scarcely taken shape as yet. Nevertheless, it was with a certain feeling of relief that he heard the echoing footsteps of his party dying away in the distance. Then he turned a pair of fearless gray eyes full upon the guardian, standing in the same watching attitude, and commanded him to lay aside his weapon. Brookes threw the rapier on the stone floor with a resounding crash.

It was an hour later before Warren stepped into the hall again, where he found the late adventure still being discussed by a batch of tongues. But

if they expected any story of wild adventure, to hear the history of some gruesome tragedy or hidden treasure, they were mistaken. He simply pointed out to them the fact that the old servant was not so much to blame for his conduct as they thought; but that it was more their fault, the simple fact being that the faithful valet was aghast at the idea of the room sacred to his beloved and revered master being given over to ruthless plunderers. Indeed, so smoothly did the wily dramatist put the case, that public opinion, which had been strongly against the obstreperous Brookes, rapidly veered round in his favour, till some of the actors in this affecting little comedy began to feel somewhat ashamed of the part they had played.

'Poor old man!' said Edith Lucas pityingly; 'and all this time we have been accounting him a dangerous madman. I'm so glad!'

Warren smiled under his moustache; and Walter Secretan, turning towards him, caught the look of amusement in his friend's eyes. Presently, under cover of the conversation, he got alongside him, and in a cautious whisper, demanded an account of the interview.

'Too long to tell you now,' Warren murmured. 'Only, if that old gentleman is mad, there is method in his madness.—Wait in the dining-room after dinner till the rest have gone, and I will tell you my plan.'

They had some time to wait, for it being Christmas Eve, the meal was a long and elaborate affair. It was nearly ten before the last *frou-frou* of skirts announced the disappearance of the ladies, and nearly half an hour later before the Squire and Colonel Lucas sought the drawing-room with many a sly allusion and bald platitude concerning the want of gallantry of the present generation. Walter closed the door behind them with a parting shot, and taking a cigarette from his case, composed himself to listen to Warren's plan of campaign.

'Did it ever strike you what a fine place this west wing would be for a gang of smugglers or coiners?' Warren commenced. 'You are not far from the high-road, within easy walking distance from the sea, and not a single servant in the house dare be near the haunted part of the house after dark. Why, they would be safer there than in London!'

'What are you driving at?' asked Walter uneasily.

'Simply this—that your faithful old servitor knows something about those rooms he is in mortal fear some one else should discover. I need not tell you that my pretty little romance touching his lifetime's devotion was a pleasant fiction. Walter, there is something going on here, and we must find it out.'

'I am afraid I don't quite follow you,' Secretan returned. 'You see, if there had been anything going on, as you suggest, all these years, we must have heard something of it. Depend upon it, poor old Brookes's brain is giving way. Remember, he isn't far short of ninety.'

'No more mad than I am. I convinced him diplomatically that there would be no further interference on our part, and you should have seen the look of relief on his face—it was a study for an artist. Now, in the next place, as to these ghostly lights they talk about?—

'They certainly do exist,' said Secretan with quiet conviction. 'I have seen them myself many a time when I was a boy.'

'That exactly confirms what I say!' Warren exclaimed triumphantly. 'Now, look at it from a common-sense point of view. Can you believe for a moment that these lights are the work of supernatural agency?'

'It certainly seems contrary to common-sense.'

'It's contrary to all kinds of sense.—Now, listen here. After I had smoothed the old rascal down this morning, we fell into conversation, and by degrees I learnt a good deal of the life of your ghostly ancestor; and, with all due deference to your family pride, I must say a more thorough-paced scoundrel seldom existed. Though, perhaps, the less I say about rascally ancestors the better. Under pretence of wanting a window open, I lured Brookes away, and while his back was turned, I opened bluebeard's chamber with the key.'

'Did you go in?' Secretan asked interestedly, for by this time he had caught some of his companion's enthusiasm.

'It was too risky, especially after I had soothed the old boy's feelings so nicely. All I wanted was to know if the key would fit. It will fit. Now, on every Christmas Eve at midnight that light is seen; so the legend runs. If you are game for a little healthy excitement, you and I will know before morning the origin of this mysterious illumination.'

'You can count on me,' Secretan returned, rising and walking up and down the room, to conceal his excitement.—'How do you propose to do it?'

'I propose to do it now, and in this way. It's past eleven; and all the others are safe in the drawing-room, and we shan't be missed for an hour. They'll think we are in the billiard-room. A couple of peacoats, a dark-lantern, and a brace of revolvers, and our preparations are complete. Is it a bargain?'

A burst of merry laughter as they passed the drawing-room door, mingled with the sound of a piano and some one singing, told the conspirators they had not been missed. As they crept silently along the quiet passages, feeling their way—for they dared not show a light from the dark-lantern—the stable clock chimed the three-quarters after eleven. A few minutes later, after a cautious walk along the unaccustomed corridors, they found themselves at length on the threshold of the chamber where, fifty-six years ago that very night, Arundel Secretan had ended his wasted life in his last hour of despair. Cautiously turning the key with many a creak and groan, the great door swung slowly open, and a second later, the conspirators found themselves safely inside.

Despite the fact of undoubted courage and resolution, each of them was conscious of a certain quickening of the heart and tightness of breath, which came as near fear as it was possible. A feeble moon was trying to struggle through a rushing mass of pendulous cloud, lighting the great oriel window; there was a cold icy draught in the apartment, chilling the adventurers in spite of their additional clothing. As their eyes gradually became accustomed to the gloom, they noticed a funeral bed to the right of the window, with sombre trappings shaking in the wind; and

placed in the centre of the window an ancient secretaire with a high carved back, and countless drawers down either side. Had the place been kept sweet and clean, the rats and mice and all-destroying moths driven away, the apartment might have been termed luxuriously furnished. As Warren and his friend noted these things, the stable clock gave out the hour of twelve with mournful cadence as the notes were borne away on the breast of the wind.

'Now for the family ghost,' Warren whispered eagerly—'the witching hour has come.—Is your revolver all right, Walter?'

'I hope you won't do anything rash,' said Secretan cautiously. 'Mind, no firing, if it is possible to avoid extremities.—Hist! what was that noise? Verily, we are going to see something, after all.'

Scarcely were the words out of his mouth, when the apartment began to be filled by a faint luminous light under the window, throwing the rest of the chamber into deepest shade. The illumination growing stronger, appeared to come from behind the old secretaire. Presently, above it rose two small points of flame, two wax candles in ancient silver candlesticks, and something which gratified the watchers' curiosity indeed. The holder of these lights—a man in the prime of life, with handsome features and full-bottomed wig, was dressed in plush knee-breeches and white silk hose; his feet clad in shoes, latched with heavy silver buckles. He wore also a peach-coloured velvet coat, slashed with pearl-gray silk, and ornamented with gold basket buttons. By his side, as was the fashion of the period, he carried a long rapier in an ornamental leather scabbard. For a moment he stood with his back to the secretaire, gazing earnestly around, then apparently satisfied with his scrutiny, turned to the desk, on which he placed the candles, and took out a bundle of papers. At this grave moment, the watchers, engrossed by this sudden apparition, with its pale deathlike features, were so startled that Warren burst into a sudden exclamation. Immediately the figure rose and confronted them; they saw the rapier flash from its sheath, as the shade of Arundel Secretan arose and started forward. But at this moment a gust of wind blew out the candles, leaving the apartment in darkness; there was a short mocking laugh; and by the time Warren had sufficiently recovered himself to swing round the slide of his lantern, the figure had vanished, leaving not the semblance of a trace behind.

There was the bundle of papers, but where was the spectre? That he could not have left by the door was clear, for that was fast shut, and search as they might, they could find no other exit. It seemed almost like a dream—the sudden entrance, the wonderful disappearance of the lights, and, last of all, the still more wonderful spiriting away of the figure.

Secretan sat down trembling in every limb; his face was white and set, while great beads of perspiration stood upon his forehead. 'Come away from this,' he said hoarsely. 'It is like tampering with a dead man's secret. Warren, as sure as I am a living man, I have seen my ancestor, Arundel Secretan, to-night!'

'Arundel Secretan be hanged!' said Warren contemptuously, as he placed the packet of papers

in his pocket for future and closer reference. 'Your nerves are all unstrung. It was that cunning old scoundrel Brookes, man! I could swear to those sinister eyes among a thousand.'

### THE DEATH OF 'BLUE BILLY.'

THOSE of our readers who are familiar with the name of Blue Billy, when they read the title of this chapter, will be ready to ask: 'Is Blue Billy really dead?' and those unacquainted with the name will have some curiosity to know who or what was Blue Billy, how he died, and how he was buried—if he had many mourners, or died friendless in the workhouse. To all such inquiries, the answer must be given—that Blue Billy is not dead yet, but dying; and when he is gone, no one will mourn for him. He is friendless. Those who know him best, hate him most. He is the pest of our towns. He stinketh in the nostrils of the people. His breath tarnishes the fine metals, destroys gilding, picture-frames, bookbindings, and steel plates. Every person shuns Billy. The only good word that was ever said of him was, that sometimes he did good to patients suffering from whooping-cough.

Most people are acquainted with Blue Billy, although perhaps they do not know him by this name. He is the cause of the smell that we experience when we pass a gaswork. Blue Billy is the technical name given to the lime rendered foul in the purification of the gas. To a great extent it is this lime, when it is removed from the purifiers, that makes gasworks a nuisance. We are probably now on the eve of a new era in the manufacture of gas, and there is every probability that the time is not far distant when gasworks will be carried on without causing offensive smells, and when gas will be supplied to the consumers so free from impurities that it will be harmless alike to the most delicate flowers and the finest gilding in a drawing-room. The purification of gas in close vessels has occupied the attention of gas engineers for many years, and it may now be said that the problem has been solved. To enable the general reader to understand the new method, we shall endeavour to explain the process of purification, or as much of it as will be sufficient for our purpose.

Crude gas as it issues from the retorts is charged with various impurities. Chief among these are ammonia, carbonic acid, and sulphur compounds, all of which ought to be removed before the gas is sent to the consumers. Ammonia is a very volatile gas, for which water has such a strong affinity that, at ordinary temperature and atmospheric pressure, it will take up nearly one thousand times its own volume. In order, therefore, to free the gas from ammonia, it is only necessary to pass it through water, when the ammonia will be absorbed, and the other constituents of the gas will pass on. Chemists have discovered two classes of substances, which they call acids and alkalis. These have such a strong affinity for one another, that the moment they are brought into contact, they unite, and form what is called a salt. Ammonia is one of the alkalis; whilst the other impurities, carbonic acid and the various sulphur compounds, are in their nature acid. The affinity

of the acids for alkalies supplies us with the means of removing the second class of impurities by bringing them into contact with an alkali. The substances hitherto used are lime and oxide of iron. Limestone is a carbonate of lime, or a compound of the metal calcium and carbonic acid. When we burn limestone, the heat wrenches the carbonic acid and the lime asunder; and carbonic acid being a gas, it passes into the air and leaves the solid lime behind. It is then said to be in the caustic state. In this condition it is ready again to take up carbonic acid and to unite with it whenever they are brought into contact. But it will also unite with sulphuretted hydrogen. Carbonic acid and sulphuretted hydrogen being the principal impurities in coal-gas, in the process of purification the gas is made to pass through caustic lime, which, by virtue of its chemical affinity, arrests these impurities, and allows the pure gas to pass to the gasholder. But by-and-by the lime gets foul, and the purifiers require to be opened and the lime removed. This is attended with a considerable amount of manual labour; and the smell from the spent lime is not only offensive but highly prejudicial to health. Gas engineers and chemists have long exercised their ingenuity in devising means for doing away with this source of nuisance. The ammonia derived from the gas itself is the agent used to effect this purpose.

It has been already said that the ammonia is washed out of the gas by passing it through water, the water holding it in solution. In this condition it is in the forms of carbonate and sulphide of ammonia. But, just as in the case of limestone, the carbonic acid and sulphuretted hydrogen can be driven away by heat, and the ammonia retained in the water in the caustic state, ready, like the caustic lime, to take up these impurities whenever they are brought into contact with it. This is done in close vessels; and when the process is adopted, a gaswork will no longer be a nuisance to the neighbourhood. The same ammoniacal water is used over and over. As it becomes foul, it is revived by heating it with steam and dispelling the carbonic acid and sulphuretted hydrogen; and a few sets of pumps take the place of manual labour. The same ammoniacal water being used repeatedly, there will of course be a surplus of ammonia. This surplus may be rendered of commercial value as liquid ammonia; or, utilising the impurities carbonic acid and sulphuretted hydrogen, it may be converted into carbonate and sulphate of ammonia.

Thus, those impurities which gas managers, formerly, were glad to get rid of by any means, may be converted into marketable and valuable products. The process has been tried experimentally with undoubted success in Manchester; and at present, the gasworks in Belfast are being fitted up with apparatus for this method of purification after recent patents by Mr Claus of London. A process lately patented by Mr Young of Peebles, introducing important modifications, promises simplicity and economy, and was a short time ago brought prominently before the North British Association of Gas Managers, by whom it was regarded as a valuable contribution towards the economy and perfecting of the purification of illuminating gas; and arrangements were made

for its practical working. A matter of such importance to gas consumers and to gas shareholders in particular cannot fail to be regarded with general interest.

## THE OLD WAY AND THE NEW.

### CHAPTER VII.

NEXT morning the tardily breaking November dawn came all too soon for Matthew Roding; he would have been glad never to see daylight again. He rose earlier than usual, shaved, dressed himself with his customary care, and went down to breakfast; but all his actions this morning were like those of an automaton, and seemed to be governed by no basis of conscious effort. On the table he found three or four post-letters; Grigson would bring the business letters later on. These he took up one after another, and glanced over the superscriptions, as if from them alone it were possible to divine the nature of their contents. One he tore open, the rest he pushed aside as being of little or no consequence. The letter in question ran as follows:

MY DEAR RODING—I should have redeemed those African bonds of mine some time ago, but have only just returned from Scarborough, where I have been laid up for the last six weeks with a confounded attack of gout. I am sorry to hear that you also are indisposed, but trust you will be as right as a trivet again in the course of a few days. I will call upon you to-morrow (Friday) at two o'clock precisely, bringing with me the five hundred pounds, together with the interest as agreed upon, when I trust it will be convenient for you to return me the bonds. The five hundred pounds was of great service to me at the time, and my hearty thanks are due to you for the kind way in which you helped me to tide over my little difficulty.—Believe me, my dear Roding, very truly yours,

VINCENT FITCH.

'Fitch's letter could not have come at a more opportune moment,' said Matthew to himself. 'If he had not written to me, I should have been compelled to write to him. His five hundred pounds is the one little nest-egg I intended all along, unknown to anybody, to save out of the general crash, should the worst come to the worst, which, unluckily, it has. The notice is rather short; still, it will do. Ruff promised to be here soon after nine. I'll give him the key of the private safe as soon as he comes, and pack him off to the City to fetch the bonds. He seems anxious to be of use; besides which, I want Grigson for other matters.'

He was alone this morning, as he had been for many mornings lately—his wife seeming of set purpose to avoid putting in an appearance till after he had done breakfast and gone to his own room.

Shortly afterwards, Ruff arrived. 'How are

you this morning, father?' he asked, with an anxiety he could not hide.

'Better, my boy, better both in health and spirits,' he answered with a sigh. 'It was the uncertainty that weighed me down so dreadfully before.—But that's at an end now,' he added with a dismal attempt at a laugh. 'The verdict has been brought in and sentence passed; I know now what I have to face.' Then, a moment or two later: 'I've something for you to do this morning, if you have a couple of hours to spare.'

'I am entirely at your service for as long as you may want me.'

'Then take this key—it is that of my private safe—and hurry down to my office in Throgmorton Street. There you will find Bunker, who probably is known to you already. Give him the key and ask him to open the safe. Inside it, he will find a bundle of papers tied together and labelled, "Congo Electric Lighting Company: Mr Fitch." After giving you the papers, he will relock the safe and return you the key. You will then make your way back as quickly as possible. But, above all things, be careful that you neither lose the papers nor have them stolen from you.'

'Never fear, sir,' said Ruff confidently, as he nodded and left the room. He had seen Grandad for a few minutes last evening before leaving the house, and had told him as much of how matters stood as had come to his knowledge. Greatly to Ruff's wonder, his grandfather had listened to him without any expression of surprise or betrayal of emotion of any kind. What did it mean? the young artist asked himself. Was Grandad becoming too old—in a word, too fossilised—to be affected by anything, however nearly it might seem to concern him? Knowing the old man as he did, Ruff could scarcely believe that. Or, which seemed hardly more likely, had he been aware all along how matters were going with his son, so that Ruff's news was really no news to him at all? In any case, Grandad was impenetrable, and Ruff had to take home his questions unanswered.

Matthew Roding's breakfast this morning was the merest apology for a meal. He was anxious for the arrival of Grigson; many minor matters had been neglected or overlooked of late which it was absolutely necessary should be attended to without further delay. He knew, of course, that he was ruined—that was a fact nothing could alter or modify; but without Grigson's assistance, it would be a work of some time and difficulty to ascertain the exact position of his affairs. But the minutes passed on without bringing the young clerk. Ten o'clock, eleven o'clock came and went, and still he had not arrived. What could have detained him? Matthew Roding began to pace the room, oppressed by vague fears of he knew not what.

Twelve o'clock arrived in due course, and then half-past, by which time he had nearly worked himself up to fever heat. At last a knock and ring. He was sitting with his back to the door, and did not take the trouble to look round when he heard some one enter the room. 'You are late, very late, Grigson,' he began. Then he turned, and his eyes fell, not on Grigson, but on

his son and Peter Bunker. There was that in the faces of both which told him, before either of them spoke, that they were the bringers of ill tidings.

'I thought it was Grigson who had come at last. Where is he? Why is he not here?' he asked quickly. His hand trembled as it rested on the back of his chair. Surely Fate could have no further blow in store for him! Had he not already drained the cup of misfortune to the dregs?

'I have seen nothing of Mr Grigson this morning, sir; but he looked in at the office rather late last evening—between eight and nine o'clock, in point of fact,' said Peter in his usual deferential way.

'Ah! What did he want there at that time of night?' asked Mr Roding with a startled look.

'He said that you had sent him, sir.'

'That I had sent him! What for, pray?'

'For a packet of papers that was locked up in the private safe.'

'I sent him for no papers.—But go on. What happened next?'

'Mr Grigson unlocked the private safe in my presence, sir—of course he had brought the key with him—and took away the papers he had come for. He said that, late as it was, you particularly wanted them to be placed in your hands last evening.'

'But—but—I hardly understand,' said Matthew, pressing his hand to his head with an air of bewilderment. 'How was it possible for Grigson to obtain access to the private safe when the key of it was never out of my possession till I placed it in my son's hands this morning?'

'I cannot say how that may be, sir,' answered Peter. 'All I know is that Mr Grigson had a key with him last evening which fitted the safe and opened it without difficulty. It was the fact of his having that key, sir, which I know you seldom or never let out of your own keeping, that lulled any suspicions I might otherwise have had.'

Matthew turned to his son. 'Did you ascertain for a fact, by personal examination of the safe this morning, that the Congo bonds for which I sent you were not there?'

'I did. There were no such papers in the safe.'

Matthew Roding sank back in his chair like a man utterly confounded. 'I see it all!' he exclaimed. 'The rogue—the unmitigated villain! I have been robbed, and by a man whom I trusted as I would have trusted my own brother. The consummate scoundrel!'

For a little space no one spoke. Then Mr Roding sighed deeply, once—twice. 'This is the last straw,' he said, turning to his son. 'I thought that nothing more could happen to me—that I had tasted the worst, and yet, see how mistaken I was!'

'But by what means did Grigson obtain possession of the key?'

'It was not my key he made use of, but a duplicate one. By what diabolical means he became possessed of it, I cannot even imagine. He must have laid his plans long ago and have been biding his time. He knew I was ruined—he knew the end had come, and that he had nothing more to expect from me. He knew the

Congo bonds were in the safe, and that, if he wanted to convert them to his own use, he had no time to lose. The consummate villain! And I put such trust in him, Ruff, such utter trust! It is like a wound from a two-edged sword.'

'Will the loss be a heavy one?'

'You shall judge. Some eight or nine months ago, this Mr Fitch, who calls himself an architect and surveyor, but who is in reality a speculative builder in a large way of business, brought me a lot of Congo bonds, on which he asked me to advance him five hundred pounds, of course at a fair rate of interest. It was out of my usual line of business; but as Fitch is a neighbour and has visited several times at my house, and as my wife and his were very intimate, I strained a point to oblige him, and found him the coin. Although Congos were not of much account in the market at that time, I had reason to believe that they would take a favourable turn before long, and I felt that I had ample security for my money. I was fully justified by the event. Before a month was over, Congos began to rise steadily, and have been going up ever since, so that to-day the bonds on which I advanced five hundred pounds are worth three thousand.'

Ruff, whose knowledge of financial matters was of the most elementary kind, was evidently puzzled by his father's explanation.

'I had a note from Fitch this morning,' resumed Mr Roding. 'He will be here at two o'clock to-day, bringing with him the five hundred pounds in order to redeem his bonds; and I have no bonds to give him!'

'But as you have no bonds to give Mr Fitch, he will of course retain his five hundred pounds, in which case I suppose you will be in a position to cry quits?' Ruff ventured to remark.

'That a son of mine should be such a simpleton!' said Mr Roding with a little scornful laugh. 'Did I not tell you that the bonds I am supposed to have in my possession are at the present time worth three thousand pounds? Even granting Fitch were willing to let me have them at their market value, I should have to hand him over a balance of two thousand five hundred pounds in order to square the transaction—a trifle which at present I don't happen to be possessed of,' he added dryly.

Ruff's face fell; he had not a word more to say.

Mr Roding scribbled something on a piece of paper and handed it to his son. 'That is Grigson's address,' he said. 'Take the first hansom you can lay hold of and drive there. Ascertain when the fellow was last at his rooms, and anything further about his movements that may possibly be of service to us. Not that anything you may discover is likely to be of much avail. No doubt he knew where to find not one but a hundred customers for the bonds, had he needed them. It would hardly be a couple of hours' work for such a clever rogue to get rid of them, receive an open cheque in payment, rush off to the bank, get the cheque cashed, and start for the continent, or whatever place he intends to favour with his presence. I've not the least doubt that he's miles away from London by this time.'

Ruff took up his hat and gloves.

'If possible,' added Mr Roding, 'I should like you to be back by the time Fitch arrives. I shall probably need the testimony both of you and

Bunker to confirm the truth of what I shall have to say to him.—How will he take it? There's the rub.—Oh, if I had but my fingers at that villain's throat, they would never lose their hold while there was a spark of life in his vile carcase!—Leave me now, both of you, but be in the way when Fitch arrives.'

Ruff came back in due course, with the information that Grigson had not been at his lodgings since eleven o'clock the previous night, when he had packed a small portmanteau and announced that he was going out of town for a few days' holiday. It was no more than Matthew Roding had expected to hear. He deferred taking further steps in the case till after his interview with Mr Fitch.

Punctually to his time, that worthy arrived. He stared a little at finding that Mr Roding was not alone. 'My son and one of my clerks,' said the latter laconically as he shook hands with his visitor.

Mr Fitch gave a curt nod, then coughed behind his hand and took the seat indicated to him. He was a short, stout, bull-necked man, with purple cheeks and round, protruding eyes. He was dressed in black; a ponderous gold chain meandered over his waistcoat; on one of his thick, podgy fingers flashed a large diamond, which seemed to acquire additional lustre from the grubbiness of the hand it was supposed to adorn.

'Well, Roding, here I am, punctual to a tick,' he began, as he sat down and ran his fingers through his hair. 'I've got the rhino, and you've got the bonds. Exchange is no robbery, as the old saying has it. Five minutes will complete our little business.' While speaking, he had produced a bulky pocket-book, which he now opened, and proceeded, with a sort of affectionate tenderness, to finger the bank-notes therein.

Evidently, Matthew Roding was at a loss in what terms to begin his explanation. 'I am exceedingly sorry to inform you, Mr Fitch, that I have not got your bonds,' he said at last with a degree of hesitation very unusual with him.

Mr Fitch's goggle eyes seemed as though they would start out of his head. 'Eh, now, how's that? Not a long enough notice, perhaps? But I thought you would only have to fetch them out of your safe, or wherever you keep such things.'

'Just what I thought myself, till two hours ago. This morning, I gave the key of my private safe to my son—not being able to go down to the City myself—and asked him to fetch the bonds for me and bring them here in readiness for you; but on proceeding to open the safe, they were not to be found.'

The purple in Mr Fitch's cheeks deepened visibly; he gasped like a fish suddenly taken out of water.

'Before you say anything, pray hear me out,' went on Mr Roding. He then, as succinctly as possible, proceeded to tell his hearer when and how the bonds had been stolen, finishing up by saying: 'I thought it best that my son and my clerk should both be present in order that they may be able to confirm the truth of what I have just told you.'

'This is a very strange story that I have had to listen to, Mr Roding—a very strange story, indeed,' said Fitch after a pause. 'Cleverly concocted, without a doubt; but I must tell you at once, sir, that I don't believe a single word of it.' While speaking, he had stuffed the notes back into his pocket-book, which he now shut with a loud snap.

A deep flush mounted to Matthew Roding's face, and his thick eyebrows came together ominously. 'I hope you don't mean to imply, Mr Fitch, that I and these two gentlemen have leagued ourselves together to impose upon you with a pack of lies?'

'All I've got to say is that I don't believe the yarn; it ain't good enough,' remarked the other doggedly.

It was only by an effort that Matthew controlled himself. 'I deplore the unfortunate occurrence quite as much as you can do, Mr Fitch,' he said coldly; 'but really, I am at a loss to know what further evidence I can adduce to prove the truth of what I have told you.'

'Deplore—deplore!' retorted the other with a scornful snort. 'You don't think I'm such a fool as to be put off with a few fine words! Do you know, sir, what those bonds of mine, which you hold, or ought to hold, are worth in the market at the present time?'

'I am quite aware of their current value.'

'I knew it—I hadn't a doubt of it. Yes, yes, you know the value of 'em, never fear! Three thousand pounds—that's what they're worth, not a farthing less. How much did you sell them for, eh, Mr Roding? how much did you sell them for?'

Before Matthew could reply, Ruff sprang to his feet and, crossing the room in a couple of strides, flung open the window. 'Father,' he said quietly, as he proceeded to turn up his cuffs, 'just allow me to have the pleasure of flinging this old rhinoceros out of the window.'

Mr Fitch's face turned a yellowish white; he hastily put his pocket-book out of sight.

'Sit down, Ruff; I command you!' said Mr Roding authoritatively. Slowly and reluctantly Ruff pulled down the window, but he did not go back to his seat.

There was an awkward silence, which Fitch was the first to break. 'Perhaps, Mr Roding, if you *can't* produce the bonds,' he said with an ill-concealed sneer, 'although, in point of law, mind you, you are bound to do so, or else lay yourself open to an indictment for fraud—perhaps, sir, in that case you are prepared to write me out a cheque for the difference between the amount I am indebted to you, principal and interest, and the market price of my property. It would be a trifle over two thousand four hundred pounds, as I reckon it; but that of course would be a mere fleabite to an eminent financier like you!'

Matthew Roding felt as though he were stretched on the rack. 'Mr Fitch,' he said, not without a certain dignity, 'I don't know whether or not you are aware of it—you may have heard of it, or you may not—but the fact is I am a ruined man. I have not more than a couple of hundred pounds in the world that I can call my own.'

'I expected to be told that—I quite expected

it. A man in possession, hey? etcetera, etcetera. Ah, ah! You see I know more than you thought I did.'

Ruff coughed and opened the window a couple of inches. Mr Fitch gave an uneasy glance over his shoulder.

'If these things are known to you, there is no need for me to say another word,' said Mr Roding haughtily.

'But I've got a few words to say to you, Mr Roding—a few words that you will find very much to the purpose,' remarked Fitch as he rose, pushed back his chair, and proceeded to button his overcoat. 'I give you till twelve o'clock to-morrow, sir—till twelve o'clock, not one minute longer, in which to produce either the bonds or the money. Either of 'em will do for me; I don't care a dump which it is. But if neither is forthcoming by noon to-morrow, I tell you candidly that I shall at once make it my business to go to the nearest police magistrate and apply for a warrant against you. I think there's no occasion for me to add another word.—Good-morning, Mr Roding; good-morning, gentlemen all—hem.' He had got hold of his hat and umbrella while speaking, and now, after a final glance over his shoulder at Ruff, he beat a somewhat undignified retreat from the room.

#### A YEAR AGO.

Just a little year ago,

You were all to me;

Even yet, I scarcely know

How such things can be.

Did you mean it all the time?

Were you false or true?

Is it change of place or climate

That has altered you?

Did you think to love me still?

Did your fancy stray?

Did you change against your will,

When you went away?

Do you still remember this,

Many miles apart?

Ah! you left your careless kiss

Printed on my heart!

Little did my soul divine

That the year would see

Your dear heart, close knit to mine,

Drift away from me.

Yet I dream you brave and true;

Through the mists of pain,

Still I stretch my hands to you

Till we meet again.

Just a little year ago!

Ah! my eyes are wet!

Cruel Love! do you not know

I can ne'er forget?

MYRA.

## CAN A BLIND MAN SEE A GHOST?

BY A BLIND CONTRIBUTOR.

'A MAN may see how this world goes with no eyes,' says the unhappy Lear; and, as is often the case with the demented, he embodies a profound truth in a paradox. We hear in every-day conversation, for instance, such expressions as, 'Any one can see that with half an eye.' Or, again, if a peculiarly sharp person is spoken of—'Oh, he can see as far into a brick wall as most people;' and so on: thus showing that the veracity of the principle expressed in Shakespeare's words in this matter, as in most, has long since been universally accepted. Hence, we have only to go a step further, and it may readily be assumed that, if a man with no eyes can see how this world goes, he can with equal clearness observe what is being done in the world of ghosts. To a blind man, therefore, we ought to turn for all reliable information from that mysterious and awe-inspiring region. He should be the accredited special correspondent, for he, above all people, has the capacity which entirely qualifies him for the post—his papers are, as it were, strictly *en règle*, and must go unchallenged. He is free of the whole country, even from its frontier to its innermost fastnesses and recesses.

The common question, Have you ever seen a ghost? can only be put to the sightless with any likelihood of getting a reliable reply in the affirmative. To suggest, therefore, that there is anything paradoxical in the query heading these remarks would be absurd; for not only is a blind man the best qualified to see a ghost, but he sees nothing else: we are all ghosts to him; all the world, and all the men and women, merely shadows, with whom, however, he is on the most familiar terms; his every-day companions, his intimates, his bosom friends. His mind's eye clothes them in forms and endows them with attributes entirely of his own creation, according to what he thinks should fit them, by the measurement he takes, from their voice and manners, of their character, stature, and appearance. These are

to him the touchstones to his judgments, and become either the passports to his good graces, or the features which inspire him with distrust, dislike, terror, or even horror. In that they are, in one sense, but visual phantoms, however—nothing but creations of the brain, reflections of ideas—ghosts, in fact—it may be thought they could not imprint themselves on his intelligence so indelibly and substantially as if beheld through the common channel of normal sight. No greater mistake could be made. The spectral image of his friend once established in his mind, the blind man beholds him plainly whenever he thinks of him or talks to him—yes, as plainly, unmistakably as those would do who are blessed with perfect physical vision. When, in our mind's eye, we see a person whom we know by sight, whose features and bodily attributes are familiar to us, his personal appearance is recalled with the vividness of reality, directly we think of him. Equally, the spectral image of any person as self-created by the blind man stands out on his mental retina—not, of course, with the actual *vraisemblance* of life—that is impossible—but with what to the blind man passes for the same thing. Thus, this can only be a *phasma* of the real person—in a word, the ghost. It is not necessary, urge the scientific investigators of these matters, for the physical retina actually to reflect the object and convey an impression of it to the brain, in order that the brain may conceive an image of that object; the mind's eye is all-sufficient in some cases for the mind; it is so for the blind man, fortunately for him.

His condition, perhaps, may be best compared with that in which the seeing find themselves when asleep and dreaming. What other men see only in dreams, he sees perpetually; for in one sense, his life is a dream, his world nothing but a world of dreams and shadows. Of him, as of the dreamer, it may be truly said:

Strange state of being,  
For 'tis still to be  
Senseless to feel,  
And with sealed eyes to see.

Modern scientific, psychological research endeavours to demonstrate that nothing in this region, any more than in any other, is due to chance, but that all in it is regulated by unswerving laws, if we have the wit to read them aright. But the region of psychology being impalpable, there is more difficulty in submitting its phenomena to recognised tests than those of the material world. Hence it is put forward that although, of course, there are no such things as ghosts, in the usual acceptation of the word, there does exist that influence of one mind over another which will create apparitions sufficient to warrant those who behold them in saying they have seen a ghost. In other words, 'one mind may impress another otherwise than through the recognised channels of sense'—sufficiently, that is, to be entirely independent of matter. There is no commoner form of ghost-story than that which supplies the motive of the popular drama of the *Corsican Brothers*, where a person on the point of death, or in some extreme moment of peril, suddenly appears, independently of the distance between them, to another person, over whom he has some mental power, or with whom he is bound up by a close personal tie. Extend the principle herein enunciated, and although there may be no dire catastrophe invoking the presence, the image of some one far away, summoned up by thought in a blind man's brain, becomes to him literally the ghost of that some one. For, if that some one were actually standing side by side with his sightless brother, he could only appear in the same ghost-like form. The imaginative presentment of him would be, could only be, identical in both cases; for the man with no eyes could not see him in any palpable shape, but that shape would be none the less real or substantial to him because it was spectral.

We are not, however, attempting to write a scientific or psychological treatise. We have but a fanciful notion for showing that your blind man should be accepted as your most true ghost-seer, and that, therefore, the paradoxically sounding question with which we start has for answer a very significant affirmative. If ever it be given to man to see the ghost of his fellow-man, the sightless should be in this respect privileged beyond all others. To them we should look for all true ghost-stories, particularly at a season when such vanities are in the ascendant. Now, therefore, that there is a Royal Commission sitting to inquire into the condition and welfare of the blind, this fact should be remembered. There is always difficulty in finding employment for the sightless, so perhaps the suggestion will open up a new occupation for them. Let it not be supposed there is any lack of sympathy expressed in these words. The blind are proverbially cheerful and light-hearted, and will not misunderstand them. They love a joke above all things, and are keenly appreciative of everything which diversifies their circumscribed existence. A professed *raconteur* with no eyes might conjure up such romances from his darkened world as would make the blood of all of us curdle. At his command, and under every kind of fantastic guise and thrilling circumstance, spirits might be made to parade so startlingly before us that all the ghostly traditions of yore would be utterly eclipsed. Were he likewise a skilled musician—and music

should be his especial *métier*—he could, with appropriate and creepy pianoforte accompaniment, tell tales which would strike awe into the souls of the listeners. With a darkened room and suggestive surroundings in harmony with the occasion, such ghostly *séances* might be got up as would far exceed those of any table-turning, spirit-rapping medium who has hitherto appeared before a credulous public. Recitals of this kind would at least be a novelty, and form an outlet for any histrionic ability possessed among a class of the community who only lack encouragement in the right direction to show themselves not one whit behind the rest of mankind in intelligence, humour, and pathos. It may sound like a quaint conceit, but your blind man may lay the hint to heart, and see if it cannot be acted on, to his own and others' advantage. It is a sportive, if not a sporting notion—let him look to it.

## RICHARD CABLE,

### THE LIGHTSHIPMAN.

#### CHAPTER LVIII.—FIFTY-LED.

'LOOKY' here, Joshua,' said Mr Jacob Corye, as his son was getting the trap ready on Thursday, in which to take Josephine and Bessie to St Kerian. 'As the Duchy Bank isn't broke, you make yourself uncommon sweet to Mary Cable, and tell the father that I'm game to go on with *Champagne Air Hotel*.—What a shock it gave me when I heard the news! and however it got about is a wonder. If folks tell news, why do they always twist it so as to stick in your ribs? I've heard one of the coastguard tell, who was in Burmah, how the natives there run amuck. They get a sword or a spike, or something unpleasant, and they run along as hard as a racer, skewering every one they meet with it. It be just the same in England with folks; if only they get hold of a nasty, sharp, spiky bit of news, they run amuck with that out of pure wickedness.'

'Father, the sky looks ugly.'

'Yes; I reckon we shall have dirty weather; Northern Nannies,\* maybe, drifts of storm and hail; but they'll pass.—What horse are you putting in?'

'Dancing Jenny.'

'Why, Dancing Jenny? She cuts capers in the shafts.'

'You had Derby yesterday to ride over to St Kerian on; and Dancing Jenny wants a run to take the tingle out of her toes.'

'If you was going alone; but with two fragile bits o' womankind, I should say put in White-face.'

'Whiteface has no life in him. Leave me alone. Do you think I can't drive? Why, you might set me to manage an Australian buck-jumper, and I'd do it.'

His father shrugged his shoulders. 'Well, put on a honey-face yourself to Mary Cable, mind

\* A 'Northern Nanny' is a cold storm of hail and wind from the north.

you, now that the Duchy Bank is not broke. Get your mother to look at your face before you start, to see that it wears a proper amiable smile.'

There was no parish or other road to St Kerian from Pentargon, because Pentargon was a bay, and not a village; and the road along the cliffs as far as where the artery of communication between St Kerian and the coast entered it, nearly doubled the distance. As the crow flew, and as the track ran for foot-passengers and horsemen, the distance was seven miles; but this lay across moor and between bogs, and only those who knew it could venture along it. The neighbourhood was sparsely populated, and the traffic was small, except along the main turnpike roads. Near the coast, the slate rocks, laden with carboniferous particles that give them a black colour, rise abruptly, but much contorted from the sea; they fall away inland, forming dips, in which are swamps, where rise numerous affluents of the Tamar; and beyond this boggy district extend granite ridges and moors in a chain, forming the spine of the Cornish peninsula. Such population as exists clusters in the valleys and by the sea; the moors are left to solitude and desolation. The short-cut to St Kerian lay across one of the sedgy, marshy basins in the slate, and then over a spur of granite moor, beneath which nestled St Kerian in verdure and shelter from the sea-gales.

Mr Joshua Corye had no idea of going round by the road; the ugly look of the sky made him desirous of getting the journey over as quickly as possible; and Dancing Jenny would be less likely to cut her capers among ruts and swamps than on a broad, macadamised highway.

When the gig was ready, Dancing Jenny began to paw and spring and show the antics that gave her her name; and little Bessie was frightened, and shrank to the side of Josephine.

'Are you wise, Joshua,' said his father, 'putting Jenny in that cart? The shafts are too short for so big a mare.'

'She'll do,' answered Joshua; 'there's no great weight behind.'

'I've put in a keg of *Magpie* ale,' said the landlord. 'There's a confirmation at St Kerian to-morrow, and perhaps the bishop might like it. He was very partial to it, I mind, when he was here once before—that is, before ever he was a bishop.'

'I didn't reckon on that extra weight,' said Joshua; 'I'll tighten the breeching another hole.'

'You can't do it,' answered his father; 'the buckle is at its furthest.'

'Then take out the keg of ale.'

'It would nigh kill the bishop with disappointment. I know for sure he's got this here confirmation at St Kerian just to be near where he can taste *Magpie* ale. Who ever heard of one at that place before? I knew by the look of his face, when he was here, that he never enjoyed himself so heartily as tasting *Magpie* ale; and when he'd done, he was off like a long dog [greyhound] home to his missus, t'other side of England, to tell her what stuff we brewed down here.—And now, blowed if he ain't brought his

missus to St Kerian! What for? I ask. Does a bishop want his missus to help him to confirm? I know better; he's brought her into the neighbourhood to taste the *Magpie* ale. And, by George! they shall not be disappointed.'

The old innkeeper helped Josephine into the cart—a tax-cart, that was convertible in many ways, by ingenious arrangement of the seats—and then heaved up Bessie into Josephine's arms. Bessie would sit between the driver and her nurse; or, if she were cramped in that way, on Josephine's lap. Bessie was uneasy at the prancing of the mare, and looked timidly in Josephine's face for reassurance. The latter smiled and appeared to be without alarm, and indeed she had been accustomed to ride and drive since she was a young girl and was not afraid of a skittish horse.

'Now, then, you kangaroo!' shouted Joshua, standing up, leaning forward, and lashing into Jenny, who bounded away at the touch of the whip, docile, conscious, by the feel of the reins, that they were in the hands of one who understood her and would put up with no nonsense.

'It's a wonderful thing to consider,' said Joshua, 'that there are men who can't see the points in a horse. You show them a good beast and a bad one, and they can't choose between them. It is like having no ear for music; and not knowing whether a chord is in tune or not.—Now, then! Jenny; none of your tricks!—Father is rarely taken up with bullocks and heifers; so is Cable; and I don't deny there's money to be made out of them; but so is there money to be made out of horses. Why should we not go in for horses here? To me, there's something mean in always growing bullocks and heifers; there's no science, no art, no interest about it. But a horse is another thing altogether. You can throw your soul into that.—Do you know this way to St Kerian, miss?'

'No,' answered Josephine. 'When I came to the *Magpie*, I came along the road.'

'That's a distance of twelve miles, or twelve and a half—two sides of a triangle.—I hope you're well provided against wet weather, miss? There's a storm coming on, and we shall be out of all shelter on the moor.'

'We have wraps,' answered Josephine.

The wheels of the trap went noiselessly over turf, and occasionally bounced over a tuft of gorse. There were wheel-tracks here and there, and in some places boggy holes full of black water. The tracks radiated away in different directions—it was hard to say in which they most predominated and indicated the existence of a way.

'One might easily be pixy-led on the moors,' said Joshua, 'and wander for days without finding a house. I've been pixy-led myself round a field. Father had in a fresh brew of *Magpie* ale, and I drank a good deal of it, and then went off to look after a gray I had at grass. The evening was dark; and after I had got into the meadow, I wandered round and about, and about and round, for an hour, and could not find the gate. At last, when I was thoroughly stupid and mad with vexation, I stripped off my coat and turned it inside out, put it on again—and there was the gate before me!—If ever you get pixy-led, mind and turn your jacket. I've heard it spoken of by the old people, often, but never heeded it till that

evening, and then I proved it.—Drat it! there comes the storm.'

A roaring, blinding rush of icy wind, laden with hail, and rain as cold as hail, came past. It was so fierce, so loud, so stinging, that Dancing Jenny was frightened or angry, and leaped and backed from it, and then stood stock-still.

'Get along, you crocodile!' shouted Joshua, lashing at the mare.

But a stubborn fit had come on Jenny. They were on an exposed moor, without rock or tree or hedge to break the force of the gale. The hail swept by them in sheets—it spun along the ground; it cut them as if the ice-particles were small-shot. To face the wind would have been impossible. It shook the cart, and threatened to throw it over.

'By Jove!' said Joshua, 'after all, father was right to ballast us with the *Maggie* ale. There's a dip yonder in the moor; we'll go down into that, and get under the lee of the hill.—Go on, you blackguardess!' And raising his whip over his head, he lashed Jenny with all the force of his arm. The mare, alarmed at the roar and force of the storm, stung with the hail on her skin, then tender, as she had been clipped and singed the day before, reared at the blow, and with a snort of anger, dashed away with the trap down the slope. Joshua put the whip between his teeth and held the reins with both hands; the decline became sharp, the wheels danced over the tufts of gorse, tore through brakes of heather, sprang into the air over a node of quartz-rock. 'Just like an Australian buck-jumper,' laughed Joshua—then Jenny was floundering in a bog, and snap—something must have given way. What then ensued, neither Josephine nor Joshua nor Bessie remembered. They had a recollection of a hammering at the splashboard, of a crash; and when Josephine collected her scattered senses, she, clinging to Bessie, and Bessie clinging to her, lay in the marsh, and Joshua some way off, motionless; and Dancing Jenny had kicked the gig to pieces, and was tearing away with the broken shafts dangling at her sides. But Josephine only caught one glimpse of her in a lull of the storm, and then down the moor-gully rushed the hail and rain again, like water pouring out of a sluice in a canal lock. About her were thousands of white cotton-grass heads lying prostrate before the wind, shivering, bobbing, as though the whole surface were covered with froth from the sea in flakes, or clots of snow. The cart was kicked to merest fragments—a wheel here, another with the axle there, the splashboard torn to shreds, the seat flung into the midst of the swamp, back-rail downwards, and the bottom and sides of the cart as though hacked to pieces with an axe for firewood. The breaching had given way, and the cart had touched the hocks of Jenny, driving the mare, already frightened, into a paroxysm of mad terror.

Josephine's first thought was for Bessie. The child was unhurt, though shaken; and when Josephine rose to her feet, she found that she also had been jarred by the fall, though no bones were broken or cuts inflicted. Her limbs trembled as with bitter cold, and a sickly faintness came over her, that prevented her from gathering together her wits and deciding what was to be done in the emergency. The effort

to stand against the wind and hail was more than she could make, and she sank to her knees. 'Lie still,' she said to Bessie, and drew her shawl over the child, to shelter her from the icy blast and needle-pricking hail. Even kneeling, with her side to the wind, she had hard ado to keep herself from being blown over, and she held to some rushes for support that were tufted with a coarse flower. The gale spent itself, at all events momentarily, and the driving hail seemed to be lifted, as a muslin veil, and beneath it Josephine could see Joshua lying motionless, as she had seen him in the first moment of returning consciousness.

'Will you remain here, Bessie, whilst I go to poor Mr Joshua? He is hurt badly.' The child gave a sign of consent; and Josephine, half standing, half kneeling, staggered along to the prostrate man. He was unconscious; he had fallen on hard ground, not in the marsh. No blood flowed; therefore, he had not been cut; but she was unable to guess the extent of his injuries. The hail was over his face, thawing with the rain into long trickles; his waistcoat, arms, and legs were capped with an incrustation of ice.

What was to be done? She could not leave him. She could not leave Bessie to run for aid. She did not know whence aid was obtainable. The utmost she could do was to get the cushions of the gig and lay one under his head. Then she went back to Bessie.

'My darling,' she said, 'can you walk?'

'Yes; but not far.'

'We must do our best. The worst of the hail-storm is over. Come with me; we must find some men who can remove Mr Joshua.'

'But where are they to be found?'

Josephine considered for a moment, standing with her back to the wind, with her hand to her head. She could not go down the valley, because it seemed to be nothing but a wide spreading swamp. To return over the way she had come would be to face the tearing wind, and would be ineffectual, because in coming so far they had not passed a house. The only chance of meeting with human beings was in going forward. Bessie must come with her. She could not leave the child to shiver in the cold beside the prostrate man, who might, for all she knew, be a corpse. So she took Bessie's hand, and encouraged her to step out bravely. The child was frightened, cold, shaken by the fall; but she had a stout heart, and promised to walk and keep up as much as she was able.

She returned up the slope, following the wheel-tracks the trap had made in the spongy soil to where it had diverged from a direct course. Then she followed what she believed to be the traces of former traffic, in the presumed direction of St Kerian. She looked about her. On all sides where she could see, where the passage of the storm had not made a blot over sky and horizon, was undulating moor, with here and there a hump of granite standing up through the moss and turf. Not a sign of the horse; not a trace of human industry. The curlews were screaming, and a flight of gulls overhead winged their way inland. Here and there, some sheep stood, clustered on the lee side of a granite block.

'Halloo, there!'

Before Josephine had seen a man, she was

startled by his salutation. Now she saw him, cowering against a piece of rock, gray-habited, of the colour of the stone.

She went to him at once. 'There has been an accident. Only a few yards away, down that hollow, a man has been thrown from his gig and hurt. He is insensible. Mr Joshua Corry—I daresay you know him.'

'What!—of the *Maggie*?'

'Yes, of the *Maggie*.'

'I know him. Is he killed?'

'I do not know. Do go at once to him.'

'I must get help.—Where is it?'

She indicated the exact spot. 'I will go with you and show you.'

'No,' said the shepherd; 'you go on with the child to my cot. You can't miss it. Keep right forward; and when you come to the Long Man'—

'The Long Man?'

'Ay, the Long Man—turn sharp to the right, and a hundred paces off you'll find some peat-works; skirt them, and you'll come on my cabin. There's a turf-fire in it. Warm yourself and the child, till we've got Mr Joshua right. I must go after help, and may be some time away.'

'But—the Long Man?'

'Of course—you know the Long Man of Carnvean. Every fool knows that. Turn to the right at the Long Man—you can't fail. A blind jackass would find the way.' Then the shepherd strode away in quest of help.

That Man was the Cornish for stone; and that the Long Man was a stone pillar, a rude primeval granite obelisk, never for a moment occurred to Josephine. She supposed that the shepherd pointed out the way to a fellow-shepherd who would give her the requisite directions, if she forgot those already communicated. So she went on, holding Bessie's hand, in the course pointed out by the shepherd. Whether she came to the monolith or not, she did not remember afterwards; she was not looking out for one, but for a tall shepherd, and she was not at that moment possessed with keen enthusiasm for pre-historic antiquities. She went on, feeling Bessie dragging more and more at her hand, till the little girl burst into a flood of tears.

'What is the matter, Bessie dear?'

'I cannot go another step—my back hurts me.'

Josephine stood still. What was to be done now? 'The distance cannot be great. We shall find the Long Man soon, and he will carry you.—Stay! Will you let me take you in my arms?—There; throw your arms round my neck and cling tightly; lay your head on my shoulder, and I will carry you. It is not far. We are sure to come to the tall shepherd in a minute.'

But no man was visible, tall or short. Josephine's knees gave way under the weight. She was not strong, and was herself tired and bruised and shaken, and was ill suited to carry an additional burden to her own weary body. Then, suddenly, they were wrapped in dense mist; it came rolling down on them like a solid wall of white wool; and in a moment they were enveloped, and could not see two paces before them. With the descent of the vapour, every

idea of direction was swept away. No distance could be seen on any side, no sky, only a little circle of earth, and that through a drift of whirling watery particles. The sense first produced was one of suffocation, then of chill penetrating to the marrow.

'Bessie,' said Josephine, 'I do not know where to go whilst this fog lasts. I will lay the rug on the ground and wrap you round in it, and wait.'

The child was too frightened and weary to object. Josephine wrapped her round and laid her on the wet moss, and then threw herself down beside her. It was impossible for her to find her way. She would only over-exert herself and fall fainting with her load, if she tried to go on. There was nothing for her to do but wait. The ground was frosted with hailstones, that showed no token of melting. The earth was black as soot, peaty, full of water, that oozed up under their weight—black water, smelling of bog. A stunted growth of whortleberry grew over it, and rushes; every blade of vegetation dripped with water, where not weighed down with hailstones cemented together. The mist penetrated everywhere; nothing could keep it out. Josephine was wet to the skin; her hands were numbed and aching with cold; her teeth chattered. She rose.

'My dear Bessie,' she said, 'we must make another attempt. There is no token of the fog dispersing. If I could only make out the direction of the wind, it would be some guide. Nothing can be worse than this. Let us make a push on. Now I will try to carry you on my back. I can manage that better than in my arms, at least it will be a change.'

So they struggled on. Josephine was warmed by the exertion; but she soon felt that her strength was not equal to more; and she halted, with shaking knees, and looked about her.

Then Bessie uttered a cry of terror. What was it? Through the vapour loomed a gigantic figure, huge as an elephant. It moved—and in another moment Bessie and her bearer saw a sheep run past them. The fog had marvellous powers of magnifying objects seen through its veil.

'There—there is the cabin!' exclaimed Josephine, and hurried forward—to disappointment. She found a huge pile of granite rocks, weathered into layers like strata of aqueous deposits, moss-covered, split into fragments vertically, and with fallen masses, like tables thrown over and leaning on one another. At all events, some shelter was to be had among these rocks, and Josephine scrambled into a cleft, and took Bessie on her lap and laid her head on her bosom. Her bosom was wet, but it was warm. The little girl moaned, but did not speak. Josephine looked at her face. The eyes were closed. 'Bessie, dear?' Then the eyes opened, and shut wearily again.

Josephine sat in the rocky cleft and looked out. The mist drove by like smoke, smoke thick as though the moor were on fire, and the mist had a peaty smell. Where she was, Josephine did not know in the least. Lest she should have gone along westward and strayed far from St Kerian, farther than when she started, was her fear.

The day was closing in, and closing rapidly. She had a watch, and looked at it, but found that it had stopped when she was thrown from the gig. She was too tired to speak to Bessie. She could not give her hopes, for she could not frame them herself. If the shepherd came to his hut and found that she wasn't there, he would look for her; but where was he to look? How to find her in such a vapour? She had been hot with carrying Bessie; now, again, she was cold, bitterly cold, and cramp came in her feet and arms. She tried to move; but Bessie uttered a fretful cry, and Josephine, on looking at her, found that she had fallen asleep. She sat on, leaning back on the rock, looking out with stagnant mind at the driving fog, shuddering convulsively at intervals with cold and exhaustion, listening to the sob and wail of the wet wind that played about the rocks and blew through its crevices. The ground fell away below the rocks rapidly, but whither she did not know, and conjectured into a 'clatter'—that is, a ruin of granite masses difficult to thread in open day, impossible in fog and dusk. With every wave of vapour a fresh fold of darkness came on. Night was setting in rapidly.

Many hours had elapsed since either Josephine or the child had eaten anything. Bessie fortunately slept. Josephine was not hungry, but faint. She ached in every limb. So great was her exhaustion, that she had difficulty in keeping her senses from sliding away into unconsciousness. The cold weighed on her like a crown of ice, and she had to summon all her resolution not to fall asleep or faint—she knew not which would ensue.

What would happen if they spent the night on the moor? Would they be alive by morning? For herself, she did not care. All her concern was for Bessie, who was intrusted to her, and for whom she felt herself responsible. She had sinned against Richard Cable so heavily, that if she failed to keep safe and restore sound to him his dear little child, the chance of his forgiving her would be gone for ever. Then she remembered how that often when at St Kerian she had seen the moor covered with cloud when the air was clear in the valley. The only prospect of life lay in escape from the vapour, and the only possibility of doing that was to descend from the moor.

She was so spent with cold and hunger and weariness, that she was obliged to do battle with herself before she could muster resolution to rise and recommence her wanderings. Her joints were so stiff that she cried with pain as she got out of her sitting posture, in which she had, as it were, hardened; she hardly knew if Bessie were awake or asleep, she was so silent. Round her neck, Josephine had tied Richard's blue handkerchief, as a protection from the cold, and it hung down in a point behind. She had laid Bessie on the ground before her, between her and the entrance to the rift. She knelt up, and unknotted the kerchief.

'I have been pixy-led,' she said, and sobbed with cold as she spoke; 'I will turn the kerchief.' She held it out above her head, unfolded it, gave it a toss and reversed it, and replaced it about her shoulders. At that moment the cloud-veil parted before the rocks, and through the falling night she looked down as into a lower world, and in

the blackness of a valley that seemed without bottom, saw a twinkle of many points of light. 'One—two—three—four—five—six—seven!' She uttered a gasp of relief—she could not cry. 'Bessie! dearest! Red Windows.'

### THE WRECK OF THE DERRY CASTLE.

On the 12th March last the iron bark *Derry Castle*, Captain Goffe, belonging to Limerick, and chartered by Messrs Gibbs, Bright, & Co., left Geelong, in Australia, for Falmouth, loaded with wheat; and for one hundred and ninety-two days she was never heard of. No trace of her could be found in any port, and she was posted at Lloyd's as missing. To the surprise of all who heard of it, the sealer *Avarua*, a craft of forty-five tons, sailed up Melbourne Bay on the 21st September, having on board eight survivors of the wrecked bark, which, as they narrated, had been cast away on Enderby Island, one of the Auckland group, eight days after leaving Geelong. From a very full account given in the *Melbourne Argus*, we extract the following particulars of this lamentable tale of the sea.

The vessel left port with a fair wind on the 12th of March, and on the morning of the 20th March, at two o'clock, she struck the rocks at the uninhabited island group above mentioned, and broke up in a very short time. The captain, both mates, and twelve seamen were drowned in trying to reach the reef-bound shore; and seven of the crew and the only passenger, Mr James Mc'Ghie, endured for four months a series of privations and adventures which seldom occur in real life. It is indeed strange how nearly the *Derry Castle* was lost without leaving a trace behind. If she had struck on any other part of the long line of western coast of Enderby Island than the apex of the north-west point, those who reached the shore alive would have perished miserably on the rocks, unable to scale the inaccessible and almost perpendicular cliffs. The scene of the wreck is rarely visited by vessels; and the only passing craft that was seen in the course of the ninety-one days' sojourn there, failed to see the signals of distress which the castaways displayed.

The *Derry Castle* made a quick passage to Enderby Island. She had a fair wind, at times amounting to a gale, behind her, and she made the most of her canvas. On the night of the 20th March, only one day more than a week from clearing at Geelong, the catastrophe occurred without the slightest warning. Never was a vessel sent more blindly or speedily to destruction. It was about ten minutes to two A.M., and the chief-officer's watch on deck. All sail was set, and the bark was bowling along twelve knots an hour before the wind. The chief-officer gave the order to haul up the mainsail, and the watch were casting loose the braces. Neither the man at the wheel nor the lookout reported land, which the survivors of the watch say could not be seen.

The night was hazy, the sky cloudy—what sailors call a rather dirty night—and the wind freshening. Without the slightest alarm being given, or effort to change the course of the vessel, she ran bow on to submerged rocks, and bumped over them for some distance with terrific force. Then her bow dropped into deep water, and the stern rested high on the reef, with the seas rolling over it. The vessel listed heavily to starboard, and began to break up. She was so close in to the land—about two hundred yards—that the frowning coast-line now rose clearly into view.

One of the survivors, the only passenger on board, Mr James Mc'Ghie, a native of Limerick, and who had been on a visit to Australia for his health, thus narrates what happened after the ship struck :

'The ship was leaning over very much, and we clung to the rail, standing on the outside on the side of the ship, as we expected she might go right over at any moment. She was crashing violently on the rock at this time. The rudder had been carried away, and the sternpost knocked clean out of her, so that we could see right through her into the water beneath. In about ten minutes the mainmast went overboard with a loud crash. The crew were all in a very excited state at this time; but word went round that she would probably hold together till daylight, and the panic somewhat subsided. Our position was miserable in the extreme—two heavy seas swept over us, the night was bitterly cold, and we had barely any clothing. It became evident that we could not live until daylight, if we clung to the wreck; and we feared that if we stayed there much longer we should become so benumbed as to be unable to swim. I could see rocks at a distance of about two hundred yards away, but there appeared to be little chance of a safe landing there. Taking advantage of a sea which came over us, seven of the party jumped off to make a fight for life. Only one of these reached the shore safely.

I should have mentioned that directly after the ship struck, the captain and first-officer passed life-buoys and life-belts to us who were on the poop, so that we were all provided with them. Five more men jumped overboard soon afterwards and swam for the shore. The rest of us went separately, one after the other. I was the last but one to leave. The remaining man was clinging to the rigging. I could dimly see his figure, but could not distinguish who it was; but I learned afterwards that it was Mr. Robins, the chief-officer. I had a life-belt and was a good swimmer, and had little fear but that I could reach the land. The only danger I anticipated was getting there too quickly. The sea was terribly rough; and soon after leaving, I was caught in a wave, which broke over me and twirled me over and over, until I thought I should have been drowned. However, I managed to survive, and swam on. I did not face the nearest rocks, which were high and precipitous, and had been hollowed out at the base by the action of the sea. They were also covered with seaweed or kelp, which hung down in long streams into the sea and floated on the surface of the water.

I had discerned in the gloom what appeared to be like a gully running into the land in a V shape about eighty yards deep. I made for this, and swam safely into the entrance.

Here I had the good fortune to find a spar from the ship, floating end onwards towards the land. I put my arm round this and clung to it. It was driven on to the rocks with great force; but as the end of it struck first, the shock was not so great as to disable me; and when the sea had broken over me and retired, I landed safely on a soft bed of seaweed. I tried to walk, but found that I was unable to do so. My feet were quite benumbed, and I fell down at every effort I made. I crawled for about fifteen yards to the shelter of a high rock, and called out loudly, to find if any one else had landed near me, and also with a view to help anybody who might be trying to land at that place. However, I got no answer. I remained for about an hour under the shelter of that rock, until the sea, increasing in violence, began to break over it, and I was afraid of being washed away. I was still unable to walk, and crawled for a distance of about three hundred yards towards some higher rocks that I could see inland, and reached these with great difficulty.

The salt water I had swallowed made me very sick, and it was with great pleasure I noticed a stream of fresh water trickling from the rocks, with which I refreshed and invigorated myself. On the rocks I now reached I found Nicholas Wallace, one of the seamen, who was calling out loudly in an endeavour to discover any companions. We heard some one answer him; but we remained together there till daylight under shelter of a big rock. It would be about three o'clock when I found him, and day broke about six. As soon as it was day, all the survivors mustered together, and we then found that only eight had reached the shore safely, seven of whom were seamen. It is impossible to describe our miserable and forlorn condition. Not one of us was even half-clad, several were almost naked, and we were shivering with cold. I suggested that we should make a search and see if we might find any of our companions lying among the rocks; and we immediately set about it. The first body we found was that of the second-mate, named Rasmussen. His body was still warm, and he had evidently reached the shore alive, for the sea could not have thrown him where he lay. We did all we could to restore him by chafing his limbs, but without avail. He had probably landed on the high rocks, and stumbling along in the dark, had fallen down a considerable distance into the pool where his body lay. The fall had killed him, or he had been stunned by it, and then drowned in the pool. We also found the bodies of Captain Goffe and a seaman. Both of these had been dashed by the waves on the rocks and killed, as their heads were crushed in. Their bodies were thrown up on shore.

When it became quite light, we could see some one in the foretop of the ship. Some of the others recognised him as the sailmaker. He was a Swede, and went by the nickname of "Sails." I knew him by no other. One of the sailors got a life-buoy and a bit of line and held it

up to him, as an inducement to try to swim ashore, by showing that we were ready to help him. He took off his coat and boots and made the attempt; but the poor fellow never reached the land. He got to some low rocks, where we could not reach him, as there was a wild sea between, and clung there for a time, but was washed off again, and, as far as we could judge, was crushed by a portion of the wreckage, for we saw him no more. We then broke up into different parties, to explore the place on which we were landed. Two started to make a circuit in one direction, and two in another; I and three others remained near the wreck. One of the parties did not succeed in making the circuit of the island, and returned. The others found an old government depot at the opposite side of the island, but there was nothing there except one bottle of salt.

The only food that floated ashore from the wreck was two tins of preserved fish and half-a-dozen pumpkins. We had no knife, but found two on the bodies washed ashore; and with these we cut rushes and made a bed for ourselves, and slept that night huddled together as close as possible for warmth. We also took the clothes from the bodies we found, and divided them amongst us, to increase our scanty stock. We buried the bodies on the island.

We did not sleep much that night, for we found that the island was a great resort for seals, and we had settled ourselves right in their track. One of the men had gone apart and taken possession of a hole, which was soon claimed by a seal, which fastened its teeth in the calf of his leg. The man immediately abandoned the place and came running to us shouting, with a large dog-seal after him. The whole of the after-part of the night we had to stand up and defend ourselves against seals. Some of them were of great size, and were very fierce; but a tap on the nose with a piece of wood always sent them to the rightabout.

On Monday we searched the wreckage and turned over the timber which had come ashore, with a view to preserve all food or anything else that might be useful to us. It was this day that we found the two tins of herrings. On the afternoon of Monday we made our way over the island to the depot, which we found to be a structure about six feet by four feet six inches in size, shaped like a tent. Into this we all crowded that night and slept as best we could. For the next ten days we lived there on shellfish, which we found on the rocks, but in very small and insufficient quantities. They could be obtained only when the tide was low. Some of the men had also killed a seal and eaten it freely, but I could not do so: it tasted like very rancid cod-liver oil. We had no fire, and the weather was extremely cold and wet. We had one box of wooden matches, but there was never sufficient sun to dry them. I had a revolver cartridge in my possession, which I kept as a last resource, and on the tenth day we got a fire by exploding this. We took out the bullet, and managed to ignite a piece of dry rag, which was fanned into flame by being shaken in the wind. This operation was watched with the most intense interest, and when we at last got a fire, our joy may be imagined.

The island was covered with a low undergrowth of myrtle, and we kept the fire going by gathering all the dry sticks we could find, as we had no axe to cut wood. About this time we found an old boiler, which had been left on the island by some whaling-party, probably, and with this we increased our food-supply by making a kind of soup of seals' flesh. Some of the wheat with which the ship was laden now began to come ashore. It was swollen with water and salt, but we liked it all the better on that account. We ground this up with seals' flesh, and made a soup, which in our condition was very acceptable. We had plenty of water everywhere, as the island was nearly all a vast swamp. We took our turns at cooking and bringing in firewood, of which we accumulated a supply, in the event of bad weather. Our greatest care was to keep the fire alight, and in order to insure this, two men were always told off to watch it. We would not trust one; and threats of lynching, which might have been carried out, were held out to those on watch, if the fire should be permitted to go out. We felt that our lives depended on keeping it up.

Our troubles were greatly lightened by finding an old axehead on the ground, which had been partly burned. There was no handle in it, and it was very blunt; but with our knives a handle was soon made, and it was sharpened by friction on a piece of sandstone. This instrument proved invaluable to us by keeping up our supply of firewood and enabling the sailors to make a punt. All this time our thoughts were busy with plans for leaving the island. We had flags flying on three different points, to attract the notice of any vessel passing; and we also had bundles of wood ready to light fires on prominent places, should a vessel heave in sight. Men were engaged every day in bringing planks from the wreck, in order to make a punt, and also in carrying over all the wheat that could be gathered up, and of this we accumulated a stock of fifteen hundredweight.

Two weeks after we landed, we found part of the captain's sailing directory, which had been washed ashore. It was too wet to read, the leaves being all stuck together; but after it was dried, we were able to discover our position, and found that we had been wrecked on Enderby Island, in the Auckland group; and we concluded that the main island was about eight miles distant.

The part of the main island which was visible to the wrecked men was Port Ross, and there it was believed would be found a government depot containing stores for shipwrecked seamen. To Port Ross, therefore, which was tantalisingly in sight, the survivors used to strain their eyes in hopeless yearning to reach it; but they had no materials to make a boat. The wreckage of the *Derry Castle* which came ashore from time to time would have sufficed to make at least a raft; but there were no implements to fashion it. So that, in spite of something being seen on the foreshore of Port Ross, which some thought to be a rock, and others affirmed was more like a building, week after week passed without any prospect of escape. Surely never was succour so near and yet so far from those who yearned to reach it. Little more than a raft was needed; in fact, one of the

sufferers was willing to attempt the voyage on two planks lashed together; but this was out of the question. Yet no boat could be made without some cutting instrument to fashion the decking timber and fittings of the *Derry Castle* which from time to time floated ashore. It seemed that the party must hope on and hope ever that succour would come, and that they could do nothing more to help themselves than to providently parch all the wheat that came ashore, and husband it carefully by keeping every one to the allowance mutually agreed upon, and which was faithfully observed.

But towards the end of May a prospect of release suddenly presented itself, as we have said, by the discovery of an old axehead, which had been left near the old depot probably by some whaling-party. Here was the tool for making a boat! The work was immediately entered upon with hopeful zest by every one. As no boat could have been launched from the side of the island on which the bark was wrecked, on account of the surf, the men carried bundles of the wreckage up the cliff and across the island to the old depot, where the boat was in due course constructed. It was nothing more than an oblong box, six feet by two-and-a-half feet, with the ends running up a little like a Norwegian prow, so as to do duty as a keel or cutwater. The calking was done with odds and ends of rope-yarn, driven into the seams with a piece of hoop-iron, which had also been found. When the boat, such as it was, had been completed, it was launched, and with many hopes and fears for their safety and that of their rude vessel, two of the party—Sullivan and Rennie—pushed off from the shore, and essayed to cross the water which divided the half-starved, nearly naked mariners from what was hoped to be a feast of plenty, if only the stores at the Port Ross depot could be brought within their grasp.

While the punt was gone those left on the island were subjected to another cruel disappointment. A sail hole in sight—came, indeed, comparatively near; and they set about making such a smoky beacon as a passing vessel might be fully expected to see. But the beacon was made in vain, for the vessel put about and left the men to their fate. It seemed to them that she must be a poaching sealer, who mistook the fire for that of people who were on the watch for poachers, and so gave the island a wide berth. Be that as it may, she came and went; and the survivors were left to rely upon their crank punt, upon the trusty sailors who manned it, and the fulfilment of the belief that the government had stocked the depot with provisions.

Two days passed without any message from the punt, and then on the third day smoke was seen on Port Ross, which assured the watchers that their gallant emissaries were safe. They soon came back with glad tidings, and provisions and clothes, to prove what they had seen in spying out the country. At last, after four months of harassing anxiety and insufficient food, shelter, and clothing, they would be housed, fed, and clothed in comparative comfort, even though their Robinson Crusoe life should be prolonged indefinitely, or until the government steamer *Stella* should make her next periodical visit to the Auckland Islands in search of shipwrecked mariners. The transportation of the men and

the remainder of their store of roasted corn from Enderby Island to Port Ross was accomplished without accident, although several trips had to be made before the whole could be freighted across. An attempt was made to employ an old boat that was found on Port Ross; but after binding her round with wire, to prevent her going to pieces, she took in water so freely that she was abandoned. The dingy, too, had to be frequently patched up; but she did the work required of her without mishap, yet in a very slow and toilsome way. Ultimately, the whole of the band, with such possessions as they had, were established at the Port Ross depot, which contained clothing, fat, and biscuits. These were luxuries to the shipwrecked band, who, however, had still before them the prospect of a long and undesirable detention at the port. This was the more unwelcome to them, inasmuch as, while the health of the party had been fairly good, several of them were suffering from the exposure they had undergone. The weather during their sojourn at Enderby Island had been variable, with not a few fine days; but the time of the year—the middle of winter—had made camping-out with little shelter or covering almost unendurable, especially for such a protracted period.

The men were still tortured by the uncertainty as to when they would be released. They had been from the 20th March to the 18th June on Enderby Island—they kept count by nothing each day as it passed—and they were destined to remain without further succour until the 19th July, when the *Avarua* put in to Port Ross in search of a boat which she had left there some time previously. The men on shore, overjoyed at hearing the vessel arrive and drop her anchor—it being after dark—hailed her; but as the weather was bad, they did not venture to board her in their punt. Early next morning, Captain L. F. Drew went ashore from the *Avarua*, and had a great reception from the shipwrecked party, whom he immediately took under his protection, and finally brought to Melbourne at considerable loss to himself and to his crew, who have shares in what was intended to be a five months' sealing cruise in Bass's Strait. The *Avarua* encountered such severe weather in coming to Melbourne that the schooner was well-nigh lost. The survivors of the bark, on their arrival in Melbourne, obtained a cordial reception at the Sailors' Home; and with the exception of Mc'Ghie, who was badly affected with rheumatism, none of them appeared to be much worse for all they had undergone.

## THE OLD SECRETAIRE.

A CHRISTMAS STORY.

### CHAPTER IV.

FRANK WARREN's practical solution of the apparently thrilling mystery had the desired effect. By one touch of common-sense the ancient tale was dissolved—in an instant the revered family ghost of the Secretans reduced to the level of a vulgar every-day fraud. When the adventurers reached the hall, they had barely time to remove their rough clothing ere they became aware that their absence had at length been noticed. In the hall, which was quite dark, some one had set a huge bowl of 'snapdragon,' the burning spirit

casting a curious blue glare upon the ring of surrounding faces. Warren was not too much unnerved by his late adventure to miss the opportunity which presented itself of taking the vacant place by Miss Secretan's side.

'Pretty conduct indeed!' said she. 'Give an account of yourselves. We have been seeking for you high and low, till we almost anticipated for you the fate of the unfortunate bride of "The Mistletoe Bough."—Where have you been?'

'Hunting the "snark,"' quoth Warren lightly. 'You shall have all my confidence directly.—Dare you snatch a raisin for me? I am afraid.'

'Certainly not. I have burned my fingers sufficiently already.—Won't you tell me what you have discovered? You must have found something.'

'We have actually had an interview with the family ghost,' Warren commenced; and then drawing her aside, he told her everything under the seal of inviolate secrecy. And, indeed, he must have told his fair listener more than that, for when the last blue flicker in the witches' caldron had burned away, and the lamps were turned up, there was a touch of colour in her cheeks, and a new brightness in her eyes, only lighted by the tale that is never old.

Meanwhile, another conversation equally interesting had engrossed the attention of Edith Lucas and Walter Secretan. They, too, had withdrawn from the rest, and striking unobserved through the dining-room, made their way into the conservatory. There was the soft light from a pair of bronze lamps shining dimly through the ferns, behind which was placed a rustic seat entirely out of observation. For a moment they regarded it in some doubt, much as if such a thing was a new object to both of them, then they sat down. For some time there was silence between them, Miss Lucas engaged in rapt contemplation of her fan. Walter stole out a hand presently and laid it upon the white wrist of his companion, unproved.

'Don't you feel horribly mean?' asked the girl at length.

'Certainly not,' said her companion coolly. 'Who was it who said that all's fair in love and war? Anyway, he was right.—My dear Edith, put it to yourself. Would you rather be here as you are, or still in London, enduring the love-like gallantry of our gouty friend Ramsden?'

'But General Ramsden ought to be here too,' said Edith demurely.

'I am overwhelmed with grief by that officer's defection. I promised Colonel Lucas he would come; and the colonel—being desirous to sacrifice his daughter to an elderly cripple, whose only recommendation is, five thousand a year and his Order of the Bath—jumped at the chance of visiting his old friend Myles Secretan.'

'But you have not told me why the general failed at the last moment.'

'No? Then I will tell you. I had to exercise a little diplomacy, such as information to the effect that Woodside was a capital place for skating, in consequence of its being in the eye of the east.—"Ah, I suppose you use hot-water pipes in the house, then?" said the general uneasily.—"My dear sir," I replied, "my father would not hear of such a thing; and even if he would, the draughts are so prevalent that they would be

useless. But of course an old soldier does not mind that."—All the same, as you know, the old soldier did mind that; hence his lamentable absence on this occasion, to my great grief, as you know.'

Edith Lucas laughed and shook her head reprovingly. 'Of course, it makes a capital subject for amusement; but I could never marry him, Walter. But seriously, I do not like this; I do not like to be engaged without my father knowing. Perhaps he would be angry at first; but in the end I am sure he would consent. O Walter, why, why, don't you ask him and get it over?'

Secretan pulled his moustache and bit his lip uneasily. He was honourable enough, as young men go; but it had never struck him till now that there was anything wrong or underhand in this secret understanding. 'I was going to tell you,' he said. 'You must understand that I am beginning to earn a living by my profession—three hundred a year, perhaps; and another three which my father allows me, for I will not take any more. And I had made up my mind not to broach the subject nearest my heart to your father till I could show him a thousand a year from every source. We have a small outlying estate called Otlands, which has usually been the portion of the eldest son on his coming of age, and which used to—does now, in fact—produce some fifteen hundred a year. But, unfortunately, my grandfather found his income insufficient for him, and, amongst other places, he mortgaged Otlands for twenty thousand pounds. The strangest thing of all is that the mortgage is held by General Ramsden.'

'But what has all this to do with us?' asked Edith, somewhat puzzled.

'Simply this—that any reduction of the amount of this mortgage increases my income. The surplus over the interest thereon, to put it quite legally, has been saved since I came of age, with that intention.—But of course you cannot understand all this professional jargon. However, it shall be as you wish, darling, only let it remain for the few days you are here, and then I will speak. Don't spoil our holiday.'

'I wonder what your father will think of it, Walter?'

The lover's face brightened again. 'The dear old governor will be delighted; and so will Ada, I know. Who would not be proud to welcome you as a daughter, when?—'

'Oh, here you are at last!' cried Warren, bursting in upon the tête-à-tête with affected unconcern, and looking at everything besides the blushing lovers before him. 'We have been searching for you everywhere. Come and indulge in the seductive game of blindman's buff.'

'Won't something less energetic suit them?' asked Secretan lazily. 'Why is it that all Christmas games must be noisy, not to say dangerous? However, if I must, I must.'

So they all joined in that simple game with a zest and gaiety and simplicity of heart that Christmas time brings to us all, when there seems to be an unseen kindly influence in the air—a deeper, holier feeling of good-will and friendship to all—when distinctions are forgotten, and high and low mingle together, forgetful of rank and class, for a few hours all too brief. When they

had exhausted that amusement, Christmas carols were started, after which every one trooped into the servants' hall to wish a happy Christmas to one and all. Whereupon the butler arose with a glittering eye and proposed the health of his master and the visitors; after which the Squire mixed a huge bowl of punch with his own hands, out of which they all drank, including Silas Brookes, whom they insisted upon dragging out from his solitary retreat to pledge King Christmas in a flowing glass. As he glanced over the rim of his tumbler, his eyes fell upon Warren's face with a glance so full of significant warning, that Walter noticed it and drew his friend's attention thereto. But Warren merely shrugged his shoulders, mentally resolving that come what may, the next trick played should be his.

'Is there a fire in the smoking-room still?' he asked, when the last good-night had been said, and quietness reigned supreme. 'It isn't three o'clock yet, and I should like one cigar before turning in. What do you say?'

As a rule, youth wants but scant excuse for stealing a few hours from the night. Moreover, it had been an evening of pleasant excitement, over and above the seasonable festivities in which they had indulged. Walter wanted no second bidding; and changing their dress-coats for something lighter and more comfortable, they selected a couple of the cosiest armchairs and commenced a somewhat confidential conversation. Presently, the discussion worked round to the visit to the Haunted Chamber.

'Frank, you are perfectly right about that rascal Brookes,' Walter said energetically. 'I didn't think so at the time; but I am certain of it now. The look he gave you over his glass, the scowl upon his face, were identical with the aspect of my counterfeit ancestor. We can't let it stop here.'

'If you think I am the man to give a thing up directly it begins to assume an interesting aspect, you are vastly mistaken,' Warren remarked grimly. 'That there is some rascality on foot here, I am certain. Hang it! a man can carry devotion to his master up to a certain point; but it does not rise to the extent of working out this ghost business for over half a century, and denying rightful owners the privilege of looking over their own premises.'

'I must confess the mysterious disappearance most alarmed me. Where the fellow could have got to, utterly passes my comprehension. That he did not leave by the door, I am prepared to swear.'

'And so am I, for the simple reason that I had my back against it all the time,' said Warren dryly. 'But you must remember that your west wing is much more antiquated than the rest of the house; and both from old association and constant habitation in the place, Brookes knows more about it than any living being.—Now, do you remember ever hearing of a secret passage connecting any one part of the house with another?'

'So that is your theory, then?—No; I can't say that I have; and what is more, I don't think that any such thing exists.'

'And, on the contrary, I feel perfectly certain there does. To-morrow afternoon, if we can get that wicked old scoundrel out of the way

for a time, we shall soon solve the question. Lombard Street to a China orange, that we find a secret passage from Arundel Secretan's chamber to another part of the house.'

Walter continued to smoke in meditative silence, watching the wreaths of smoke curling round his head. Over all the house there reigned a deadly stillness; the wind outside had fallen, a bright moon shone upon the drawn blinds.

'What makes you think there is a mystery here?' he asked.

'Isn't there mystery written on the face of it? Here is an old servant so deeply versed in his master's secrets that he can be trusted on a confidential important mission, and not only that, trusted to be the bearer of a large sum of money. He alone knew the real cause of his master's death; he told the story after his own fashion. Before it could be proved, the only other man who could throw any light upon the strange affair was dead too. Need I say that I am alluding to Edgar Warren? How do we know, you and I, that, after all, this money was not actually sent?'

Warren had dropped his voice almost to a whisper. For a few moments, nothing was heard save the monotonous click-clack of the great hall clock and the soft sobbing of a dying fire. There was, moreover, such an earnestness in the speaker's tones, that Secretan fell in unconsciously with his humour.

'You mean, that he brought the money home with him? In that case, what reason was there for Brookes, after telling my great-grandfather that his mission was unsuccessful, to mention the reason of his errand to a soul? And if he had the money, why remain here?'

'Who can follow the workings of the human mind? But, for the sake of argument, let me try. Brookes from his close connection with his master must have known my esteemed relative well. When he found him at Venice in the autumn of 1823, he must have seen—as other people saw—death in Edgar Warren's face. Fletcher, the valet, told him his master was dying; that, Brookes admitted to me after that dramatic episode in the west wing. Now, here was temptation placed in his way. He would probably reason thus: "If I receive the money, and deny having received it, and my master's friend dies, I am safe. If he lives, then I must make my escape." But fortune favoured him strangely; for in a short time they were both dead. Brookes is a man suffering from some secret remorse; he has lying on his conscience a crime he dare not disclose. Some day, perhaps, you will know. But I am going to force his hand, if I can; and, not to put too fine a point upon it, I should like to clear my family name—for more reasons than one.'

Walter had followed this close reasoning carefully, not a little struck by the force of his companion's logic. For a moment he wavered; a little colour crept into his face as he replied: 'Strange things do happen—things we cannot explain. Is it not just possible that we have seen a supernatural visitor—that the figure you took for Brookes might be, after all, the shade of Arundel Secretan?'

'My dear fellow, I am not mistaken. And

besides, ghosts do not handle bundles of papers in that business-like fashion.'

The speaker drew the packet from his breast-pocket and broke the string. There were a heterogeneous mass of papers, smelling strongly of damp and mould, the ink upon them faded to a dull, lustreless red: invitations to rout and ball, a batch of unpaid bills, and small notes in more than one feminine handwriting. One there was, sealed with a coronet, unopened, and bearing the superscription, 'To Arundel Secretan, Esquire, of Woodside, Kent.' With an air of faint curiosity, Warren tore it open and commenced to read. When he had finished, he laid the letter down with a calm air of triumph. 'When was Brookes sent to Italy?' he asked.

'Early in the autumn or late summer of 1823. —But why?'

Without deigning any reply, Warren read as follows:

'VENICE, October 1823.

'Without my fostering care, 'twas but natural for trouble to overtake you. But your sore strait, as you call it humorously, is but a rosy plight; for, hearing of your indebtedness to St Devereux, at Venice (you were both at Rome, remember) I wrote to that nobleman a letter reminding him, quite good-naturedly, of certain little indiscretions of his youth known to me; also, that I had heard of his wonderful luck(?) at cards with you, and demanding from him a receipt for the money, which he was to take as paid. This I now enclose.—That I am your debtor both in money and kind, I own; and it is fortunate that I am at present in a position to aid you—a consummation not always equally possible. All you want, I lack; but in coin and current security, by Brookes's trusty hand I forward you nearly seventeen thousand pounds, leaving just enough for my needs; also a little jewelry, the gift of certain foolish admirers of mine, worth something to you in your trouble. Had you not quitted Venice so hastily, I would have repaid you then all I owed. May it serve you better than it has served me.—EDGAR WARREN.'

'And now,' Warren said, when he had concluded this strange letter—'and now, to find out where the cunning scoundrel has hidden the money.'

### PREMEDITATED PAUSES.

THERE are many kinds of premeditated pauses. Dickens makes one of his characters resort to one of the most familiar forms of the premeditated pause in a very characteristic manner. Readers of *Martin Chuzzlewit* will remember that, on a memorable occasion, when Mr Pecksniff came down-stairs to the door of the *Blue Dragon*, he found Mrs Lupin looking out. In reply to an observation from that lady—'A beautiful starlight night,' said Mr Pecksniff, looking up. 'Behold the planets, how they shine! Behold the—' Those two persons who were here this morning have left your house, I hope, Mrs Lupin?' The two persons referred to were of course Martin Chuzzlewit and Mark Tapley. It seems almost impossible to imagine that such a man as Pecksniff would have asked after them

in a direct manner; and therefore Dickens, with that attention to minute detail so characteristic of all his writings, makes him resort to a form of the premeditated pause, as if the matter had just occurred to the immortal humbug. It is a favourite trick of many shallow-minded rogues to break off suddenly in the middle of a sentence and ask a question or make an observation, as if it had just occurred to them.

Another familiar form of the premeditated pause is often used by badgering counsel, who are wont to pause after each word of a question, to give the witness an idea that it is of great importance; but this ruse is not always effective, as the following anecdote will show. Counsel: 'Now—what—did—you—do—when—as—you—say—the—prisoner—threw—a—beer—glass—as—'you?' Witness (promptly): 'I dodged!'

Some time ago, a joke turning upon a premeditated pause appeared in one of the comic papers. The scene is a courtroom, and the judge, addressing the prisoner, says: 'I fear you are a great rogue.' With amazing coolness, the prisoner says: 'Not such a fool, my lord, as you'—here followed a lengthy and evidently premeditated pause—'take me to be.' This manufactured anecdote was doubtless suggested by the speech made by Lord George Sackville during his trial. The words used by his lordship were: 'I stand here as a prisoner unfortunately that gentleman' [indicating the judge] 'sits there as my judge.' The result of the non-observance of the pause after 'unfortunately' was that Lord George was accused of contempt of court.

Lord Erskine was in the habit of making a very effective pause in all letters replying to solicitations for subscriptions. He wrote: 'SIR—I feel much honoured by your application to me, and I beg to subscribe'—here the reader had to turn over the leaf—'myself your very obedient servant,' &c. One of the best instances of this form of pause occurred in a letter received by a popular physician. This gentleman was pleased with a certain aerated water, and by his recommendations he managed to procure for it some celebrity. For this he expected neither reward nor thanks. Imagine his surprise, therefore, when he received one day from the makers of the aerated water an effusive letter, stating that his kind recommendations had done so much good that they ventured to send him a hundred— Here the page turned over. 'This will never do,' said the doctor; 'it is very kind; but I will never think of accepting anything.' Here he turned the page, and found the sentence ran—'of our circulars for distribution.'

Some persons have an annoying habit of anticipating the point of a good story, and of supplying a word when in conversation, if the speaker happens to pause. Canning once set a very effective trap for a gentleman who was in the habit of anticipating the point of his stories; and a husband, by a carefully premeditated pause, effectually cured his wife of the same habit in a somewhat similar manner. 'Dear me!' he said one evening, 'people should be more careful.'—'What about?' asked his wife.—'I was thinking of something that occurred in town last night. Major Baxter and his family sat out in the garden until late; and when the major got up and went into his room he had not noticed that his playful

little son had slipped away. Just as the major stepped into his room, he heard something under the bed—in fact, saw something—and thinking that a robber had secreted himself there, he seized a pistol and fired under the bed, and—  
‘Merciful goodness, and shot his little son!’ exclaimed the wife.—‘No,’ said her husband, with a quiet smile—‘the cat!’

It is always advisable to hear the end of a sentence. A literary man, for instance, once said to one of his lady-friends: ‘Will you accept my hand’—Gushing maiden: ‘Why, er—so sudden—so unexpected.’ Literary man (proceeding, unmoved)—‘book on political economy?’ Something similar is a story told of another couple. He: ‘How bright the stars are to-night! They are almost as bright as’—She (expecting ‘your eyes’): ‘Oh, you flatter me!’ He (proceeding): ‘they were last night.’

Most orators make more or less use of premeditated pauses for rhetorical effect. A popular lecturer in the north of England is very fond of them; and in this connection he has given a hint that may be worthy the attention of young speakers. In reply to a friend who taxed him with pausing frequently at the beginning of his lecture, as if he were nervous or did not know what to say, he said that the best method of attracting and riveting the attention of an audience is to give them the idea that you are flurried, unaccustomed to public speaking—in short, that you are going to ‘break down.’

Lord Palmerston once made use of some very effective pauses which he could not have prepared beforehand, and these are worth quoting in conclusion. Whilst electioneering at Taunton, he was greatly troubled by a butcher who wanted him to support a certain Radical policy. At the end of one of his lordship's speeches, the butcher called out: ‘Lord Palmerston, will you give me a plain answer to a plain question?’ After a slight pause, Lord Palmerston replied: ‘I will.’ The butcher then asked: ‘Will you, or will you not, support this measure—a Radical bill?’ Lord Palmerston hesitated, and then, with a twinkle in his eye, replied: ‘I will’—Then he stopped. Immediately the Radicals cheered tremendously. ‘not’—continued his lordship. Loud Conservative cheers. When these ceased, Lord Palmerston finished his sentence—‘tell you.’ He then immediately retired.

## THE OLD WAY AND THE NEW.

### CHAPTER VIII.

It was night. To Matthew Roding, sitting alone with locked door, it seemed days since Mr Fitch's visit, whereas a few hours only had elapsed. No sooner had Ruff and Bunker left him, than he locked himself in, and had so remained ever since. His wife had knocked twice, but had been refused admittance. Ruff also had come, but had been equally denied. He had sat without stirring till it was quite dark; but at length he had drawn down the blinds and lighted the lamp, and had then gone back to his easy-chair in front of the fire. All day he had eaten nothing; the mere thought of food was distasteful

to him. Nearly all his thoughts since Fitch's visit ran in one groove. What ought he to do? In what way did it behove him to meet this new danger with which he was threatened? He knew Fitch too well not to feel sure he would carry out the threat which his last words had embodied. His application for a warrant would be granted; the warrant would be put into the hands of an officer to execute; and to-morrow night he, Matthew Roding, would in all probability be sleeping within the walls of a prison. The charge against him would be nothing less than one of fraud and embezzlement; it would be Fitch's endeavour to make out as strong a case as possible. And how would it be possible for him to prove his innocence? Would Bunker's statement be credited? Would the fact of Grigson's disappearance carry any weight with it? Who would believe that the latter had obtained access to the safe without his, Matthew Roding's, connivance and consent? Then, again, when it came to be bruited abroad that he was ruined—a man hopelessly insolvent, with liabilities amounting to many thousands of pounds—would not the charge against him assume a still graver aspect? Would it not be thought, even if it were not alleged, that in his desperate need he had himself disposed of the bonds and diverted the proceeds to his own uses? In every way, Fate seemed to be working against him.

Even should a prison not be his immediate doom, heavy bail would be required at his hands—and who would risk becoming bail for a ruined man? And then the shame of it—the having to appear in a police court time after time—for such investigations are not concluded in a day—to answer a charge so heinous and disgraceful! Could he ever afterwards hold up his head and look the world straight in the face as he had hitherto done? Even should he be ultimately acquitted—unless, indeed, Grigson should be captured, which was a contingency it would not be safe for him to count on—a certain stigma, never to be got rid of, would cling to him. Men would pass him by on the other side with averted faces; many who had known him in prosperity would know him no more; he would be looked upon as a moral pariah.

As he sat there alone, these thoughts mixed and commingled with many others, some of them of the most trivial import, kept ebbing and flowing through his brain. His heart grew faint within him when he thought of the dread to-morrow. Could he bear to confront it? he asked himself again and again. No; he could not—he would not! There was one way, and one only, out of this terrible tangle in which he had become so hopelessly involved. When they should ask for him on the morrow he must be far away! He was worked up to that desperate frame of mind which does not pause to consider consequences; which, if any casual thought of them intrudes itself, crushes it down by main force and marches

over it to whatsoever predetermined end may be in view. Matthew Roding never stopped to think that his flight at this particular juncture would be set down as undoubted evidence of his guilt. Mind and body alike were unnerved and unghinged by all he had latterly gone through. He felt that it was utterly impossible for him to face the morrow's ordeal. He must escape while there was yet time. Only to get away somewhere—anywhere—he craved for nothing more than that.

No sooner had this thought fixed itself in his mind, than he became possessed by a wild, unreasoning desire to set about its execution without delay. He looked at his watch. It was still only nine o'clock, whereas he could have sworn it was long past midnight. There was just time for a few last arrangements before hurrying to Euston to catch the midnight express. He would go down to Cumberland, to the place where he had spent many happy years when a boy; he would be safe there for a while, and have a breathing-space during which to consider what his future movements must be.

While these thoughts were hurrying brokenly through his brain, like torn clouds blown by a tempest across the midnight sky, there suddenly came an importunate tapping at the door. He started involuntarily, and an icy shiver ran through him; for one brief instant he was possessed by the thought that some one had come to arrest him. A moment later, he recognised the folly of his fears. 'Who is there?' he asked in tones that sounded harsh and strident even to himself.

'It is I—Ruff,' came the answer.

Matthew crossed to the door, but did not open it. 'I cannot see you to-night, Ruff; I am exceedingly busy. Come to me the first thing in the morning.'

'It is Grandad who has sent me; he would like particularly to see you either here or in his own room.'

For a space, while one might count six slowly, there was no answer. Then Matthew said: 'I cannot see him to-night—it is quite out of the question. Tell him I shall be glad to see him, and—explain everything to him at ten o'clock to-morrow morning.' He waited till the sound of Ruff's footsteps had died away, and then he went slowly back to the table.

Grandad! The word had awakened thoughts and memories he would fain have let slumber. He, too, that white-haired, inoffensive old man, to whom he owed so much, and whose generosity he had repaid with such base ingratitude—he, too, would be involved in the hideous ruin that was about to be consummated. He had stripped himself of all he had in the world, and had endowed his son therewith, and this was his reward—that for the short remaining span of his days he should be homeless, and dependent on the charity of others for his daily bread. Oh, the burning shame of it! Matthew Roding sank into a chair and covered his face with his hands; his frame shook with the emotion he could no longer suppress. Nothing in his own troubles had moved him as he was moved now. But with strong men such attacks are both rare and of brief duration. The tempest having spent its force, died away almost as quickly as it had

arisen. Ruff, he reflected, would never see his grandfather want either for food or shelter. Matthew rightly gauged his son when he said to himself that should such a necessity ever arise, the boy would gladly share his last crust with the old man. But that in nowise lessened the heinousness of his own offence; it was through him, and him alone, that the possibility of such a thing could ever have come to pass.

He looked at his watch again. Half-past nine. He had little time to spare if he wished to catch the midnight train. To Ruff alone should be confided the secret of his whereabouts. It was necessary that he should be kept informed of the progress of affairs at home, and he felt instinctively that he could rely implicitly on Ruff's secrecy and discretion. He would also leave a few lines for his wife; it would be better than a personal parting; he dreaded a scene above all things just now, and Mrs Roding was the kind of woman who would be sure to make one.

Seating himself at his desk, he wrote a few hurried lines to Ruff, telling him where he was going, but entering into no particulars of his reasons for doing so, and arranging for a means of communication with him without the necessity of having his letters sent to the house. Then he scribbled a hasty note to his wife. She must be guided in everything by Ruff, he told her; and above all things, she must endeavour to keep up her cheerfulness. Their separation would not be for long. Then from his pocket-book he extracted a thin roll of bank-notes. These he counted and proceeded to divide into two equal portions, one of which he put back; the other he enclosed with the note to his wife. When this was done, he turned down the lamp till nothing but a faint glimmer was visible, and then taking the two letters in his hand, he unlocked the door and stood for a few moments, listening intently. There was not a sound anywhere. Closing the door behind him, he sped quickly up the thickly carpeted stairs. It gave him a little start to see his boy's bedroom door partly open and a light shining from within. Hearing no sound, he pushed open the door and looked in. Freddy was asleep in bed, and Mary Nunnely was sitting near him, busily engaged with her needle. The movement of the door startled her, and when she saw Mr Roding's haggard face thrust into the room, she could not repress a slight scream. He held up his hand warningly as he went forward on tiptoe. Happily, the child still slept. Matthew drew near and bent over him, and then laid a hand lightly on his forehead: it burned beneath his touch. The child's soft cheeks were flushed with fever, and his breathing was quick and laboured. Mr Roding turned a startled look on Mary.

'You have no occasion to be alarmed, sir,' she said. 'Dr Brown looked in about an hour ago. He says it is nothing worse than a feverish cold, and that Freddy will be all right in a day or two.'

'Poor little chap!' said Matthew with a sigh. Then he touched the child's hot cheek lightly with his lips. He was more deeply moved than showed itself on the surface. Of all creatures in the world, his child was dearest to him, but, in the urgency of the desire that was upon him

to get away, he had for the time forgotten him. Now, however, he felt that to have to part from his boy would cause him the keenest pang of all.

'You have always been kind to him, Mary,' he said. 'What, indeed, would he have done without you! And you will continue to be kind to him, won't you, after I am gone? But I need not ask. I know you will.'

'After you are gone, sir!' said Mary in utter surprise.

He made a little gesture of annoyance; he had forgotten for the moment that his departure was to be a secret from every one. 'Circumstances compel me to leave home for a little while,' he explained. 'I hope the parting will only be for a short time; but at present I cannot say exactly for how long.' Then, after a moment's thought, he said: 'Where is Mrs Roding?'

'She has gone to lie down; she complained of a bad headache; but I was to be sure to call her the moment Freddy awakes.'

His wife's absence from the scene materially aided his plans. He would be able to get unobserved to his dressing-room, where ten minutes would suffice him to cram into a bag the few necessities he purposed taking with him. That done, he would steal down-stairs and let himself out of the house unseen by any one. Once more he stooped and kissed the unconscious child, then taking one of Mary's hands in his, he said: 'God bless you, my dear, for your kindness to my boy! Whatever may happen in the future, I shall never forget it.' Next moment, he was gone.

Matthew had reached his dressing-room, and had placed the two letters where they would be seen by the first person who should enter, and was just opening his bag, when he was startled by a slight noise behind him. Turning quickly, he found himself face to face with his wife. For once, Mrs Roding had discarded both her jewelry and her trailing robes. She was dressed in a simple morning wrap. Her eyes looked worn and hollow, as if with much weeping, while the rounded contours of her cheeks had lost something of their whilom plumpness. Her husband stared at her, but did not speak. Going up to him, and placing one hand on his shoulder, while with the other she pointed to the bag, she said: 'Matthew, what is the meaning of this? Surely, surely, you are not going to leave me!' There was a pathetic ring in her voice that sounded strange to his ears.

Thus brought to bay, he felt that equivocation would be useless. 'Yes, Tilly; I am going away; but only for a very little time, I trust. I cannot help myself; circumstances compel me to go. I thought you were asleep, and that it would be better not to disturb you. I wanted to soften the parting as much as possible. But I was not going without leaving a message. See, here is the letter I had written to you.'

'A letter! What to me is a letter? And you would have gone away and left me without a word! O Matthew, have I deserved this at your hands?'

He turned and rested an elbow on the chimney-piece, but did not speak.

'And yet, perhaps, it is no more than I have deserved,' resumed Mrs Roding after a moment or two. 'If I had been a different wife, you probably

would have been a different husband. Ah, how foolish we have been, dear—how very, very foolish! I can see it now; the scales have fallen from my eyes.'

Her husband glanced at her with surprise. What change had come over her?

'If you *must* go away, dear—and I will not even ask you why you must—cannot you take me with you?'—Matthew shook his head.—'I would not worry you; I would not be a trouble to you in any way. I would not care a bit how poorly we might have to live, if only I might be with you.'

He could hardly believe his ears. Perhaps she read in his eyes something of what he felt.

'I have had time to think of late,' she resumed—'to think as I never thought before. Both you and I, Matthew, have trampled happiness under foot in our chase after shadows. Is it too late for us to find it again? I do not know—I do not know!'

She had laid her head against his shoulder, and he knew that her tears were falling. There is a contagion in such moods, and Matthew Roding felt strangely moved. He bent his head and pressed his lips to her hair—that hair which once to him had seemed so beautiful, which he had kissed hundreds of times before marriage and so very seldom after.

Presently she looked up with a wan smile and brushed away her tears. 'I didn't mean to break down; but it's over now,' she said. 'I will promise not to annoy you in the same way again. But oh! my dear, you will let me go with you, will you not? Do not leave me behind. I could be ready in half an hour, or even less.'

'It is out of the question, Tilly. There will be a hundred things for you to look after and attend to when I am gone. Besides, there's the child.'

'Ah!' she exclaimed with a start. 'For the moment I had forgotten him. No, no; you are right; he is ill; and I must not leave him. I will not urge you by another word. Tell me what it is that you wish me to do while you are away.'

He tore open the note he had addressed to her and gave it her to read.

'You say here that I am to be guided in everything by your son,' she said slowly, looking at him with wondering eyes.

'Yes; it must be so. There will be so many things to look after of which you have no knowledge and with which only a man can deal.'

'Then let it be as you wish.'

Ruff has been badly treated, Tilly, by both of us. I see it, and regret it now. But he is not one to rake up old scores; he is staunch to the backbone; you may trust him in everything.'

'You know best, dear: it shall all be as you say.'

More than ever was Matthew astonished. Was it possible that his wife had never betrayed her real nature till now? that her heart, incrustured by a hundred prejudices of education and bringing-up, had had no knowledge of its own finer feelings, of its undeveloped capabilities, till Adversity had knocked at the door and imperatively demanded admittance?

He was recalled to a sense of time and place by the chiming of the clock. The impulse to get away, he hardly cared whither, was still as

strongly upon him as before. Although his colloquy with his wife had taken up but a few minutes, it had by so much lessened the chance of his catching the midnight train. He began to pack his bag hurriedly, giving his wife a few last instructions as he did so. She on her side was not idle. His anxiety not to miss his train had infected her. She strapped up his rug, and filled his flask with brandy; she replenished his cigar-case; nor was a muffler for his neck or his travelling-cap forgotten. In a very few minutes everything was in readiness. 'I kissed Freddy as I came up-stairs,' he said. 'I won't go near him again; I might disturb him.'

Mrs Roding did not answer; her arms were round his neck, clasping him in a last lingering embrace. He strained her to him, while their lips met again and again. From the heart of each, Love, new-fledged, had freshly sprung. Misfortune had served to bring husband and wife together in a way that prosperity never had and never would have done.

A few murmured syllables and then it was time to part. 'Do not come down-stairs,' he said. 'If any of the servants should happen to be about, they might think it strange.' A final kiss and he was gone.

Although Matthew Roding did not tell his wife so, he had made up his mind to take his departure by way of the back entrance at the bottom of the garden. For one thing, it was the nearest way to the railway station; for another, the road was lonely, and there would be little likelihood of meeting any one who knew him. There was not a creature about the lower part of the house to bear witness to his departure. Was it the chill night-air, or some influence far more occult, which sent a shiver through his frame as he closed the door noiselessly behind him, and plunging into the blackness of the shrubbery, began his dismal flight, leaving wife, child, and home behind him?

As soon as Mrs Roding had in some measure recovered her composure, she proceeded to her child's room. Freddy was awake, and Mary was in the act of giving him some toast-and-water as his mother made her appearance. The child gazed at her for a moment or two with brightly feverish eyes; then he lay back on his pillows and took no further notice of her.

Mrs Roding clasped one of his hot little hands between her cool palms. 'You will make haste and get well, won't you, darling, for mamma's sake?' she said.

'Fweddy don't know—pwaps,' answered the child listlessly, after a few moments' consideration. He had a way of speaking of himself in the third person, as though he were some one else.

'Wouldn't Freddy like to go a long journey with mamma—a long, long journey in a railway train into the country, where there are horses and baa-lambs and cows, and beautiful green fields that in spring will all be covered with buttercups and daisies?'

Freddy considered a while; his little mind was evidently revolving the picture thus set before him; then he said: 'Fweddy would like to go a long way in the twain with Mawy. Mawy is kind, and loves me, and I love Mawy.' Then, after a further pause, and with his eyes turned

up to the ceiling, as though he were simply communing with himself: 'Mamma is nearly always cwoos with Fweddy; she calls him a bad boy, and sends him away fwom her. Mawy and Fweddy will go away, and manima can stop at home.'

Mrs Roding sank on her knees by the side of the bed. 'Heaven help me!' she murmured between her sobs. 'I have lost the heart of my child; it is mine no longer.'

#### FIRELIGHT.

Nor summer's noontide glory  
Enfolding mountain hoary,  
A breadth of woven gold;  
Nor moonbeams as they quiver  
At midnight on the river;  
Nor starlight pure and cold;

Nor glare of lamps revealing  
The giddy mazes wheeling,  
Of feet that never tire—  
Can rival in their splendour  
That mystic charm and tender,  
A trembling, fitful fire.

For while the gay light dances  
Upon the wall, what fancies  
Come dancing o'er the soul—  
Come quicker yet and quicker,  
The more the bright tongues flicker  
In lightnings from the coal.

Then palaces are builded,  
And days unborn are gilded  
With visionary gleam;  
'Tis then the memory passes  
Beneath the churchyard grasses  
In retrospective dream.

Ah, Firelight, weird, enchanting,  
Bright hopes and dreams implanting,  
Most sweet of lights and blest,  
Beneath thy benediction,  
Hearts weary with life's friction  
Can find a moment's rest.

The Conductor of CHAMBERS'S JOURNAL begs to direct the attention of CONTRIBUTORS to the following notice:

1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'

2d. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3d. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, should have the writer's Name and Address written upon them IN FULL.

4th. Offerings of Verse should invariably be accompanied by a stamped and directed envelope.

If the above rules are complied with, the Editor will do his best to insure the safe return of ineligible papers.

## FIRELIGHT FANCIES.

THE winter spirits are abroad once more, holding their revels mid earth and sky. No one ever sees them, but they are very active notwithstanding, and know everything that is going on in their own particular sphere. They are very curious too. Shall I tell you what they find out? They look into an old house and see the dancing fire-light throwing grotesque shadows on the walls, lighting up with ruddy gleam the old pictures and dim corners of a pleasant parlour, where, from quaintly carved brackets, shine out dainty bits of ancient china, pure white eggshell, tinted with a scroll of delicate-hued leaves and flowers; clear bright-blue cups and sugar-bowls, with brilliant winged butterflies poised jauntily on the edge, peeping into the interior; and tall crimson vases of Bohemian cut glass. The bright flames cast cheerful rays out into the dull, wet, cold street, through the crimson curtains and softly falling lace; and wanderers catch the warm radiance, and feel happier for the glimpse into the cosy nest.

The winter spirits like to see people, when, unseen, they sit in the gloaming and think over the scenes of their past life, as they crowd on the memory. They know it is good for them to have just one hour's rest in the firelight from the 'burden and heat of the day,' to think of those that have been 'loved and lost,' of the work done or left undone. If they are young and hopeful, the twilight visions are as bright as the dancing flames, and as full of pictures of a happy future. If they are middle-aged, and weary of the day's work and worry, how grateful are the sensations with which the twilight is welcomed; and the aching eyes are closed in thankfulness for peace and quiet, when resting before the warm hearth on the soft couch, or in the comfortable easy-chair.

The aged grandam drops her knitting and nods in the warm corner, and perchance dreams of the golden days of bygone youth, and of the eternal youth that seems now not far off.

The spirits see the troops of little ones, tripping

with eager feet down the stairs to the parlour, for their one 'children's hour,' that Longfellow has immortalised in his charming poem. How children love the firelight! How happily they sprawl on rugs or sit on stools at your feet, and watch the flickering flames, as some oft-told tale is related of giant and dwarf, fairy godmother, or the wonderful adventures of Alice through the looking-glass. Now the laughing trots will cling to your hands and beg for 'Another story—just one, please.' Do they ever tire of hearing about, Once upon a time, when all the people lived in tents?—of the long journey across the desert on the backs of camels?—of the wanderings beside the Nile with the turbaned, white-garmented Arabs?—of the rests under the palms, and the welcome springs of water? How the eager fingers stretch out for the rough pencil illustrations that are made by 'father' in the firelight on tiny scraps of paper, that are treasured afterwards for days; and do they ever hear the end of that favourite story? Do not the waving white garments get mixed up with the camels, and sleepy little lips murmur a protest about being tucked snugly into bed?

What can be more delightful than to sit in the ruddy gleam of the firelight with an old familiar friend, and talk of all that has happened to each other, during, perhaps, years of absence and silence!

To speak of many a vanished scene,

Of what we once had thought and said;

Of what had been or might have been,

And who was changed and who was dead.

The winter spirits love to listen to tales, welling up from the recesses of the memory, of scenes that have been long forgotten—of summer trips taken into the heart of the country, amidst the gray old hills, and woods, and trout streams of early youth—of wanderings in quaint old German towns, and the dim cool cathedrals of the sunny Rhineland; and the vine-clad hills and slopes of fair Italy, where myrtle and orange trees perfume the air with their loads of balmy sweetness—where, day after day, the blood-red sun sinks into the deep blue seas, or rises over the purple hills in

clear, unvarying brightness—of the more northern land of the Midnight sun, where dawn and twilight meet in a close embrace without the darkness of night between—of Welsh valleys and mountain maids—of purple moors and Highland homes.

At the sound of music, the winter spirits peep into the hall, and see blithe young maidens, and hear the trip of dancing feet in a gay reel or dreamy waltz. They see 'eyes look love to laughing eyes again' in the crack and sparkle of the huge wood-fire, as it goes roaring and flaring with mirth up the wide chimney, lighting up the heavily carved roof, the bright winsome faces of the girls, the stalwart figures of the scarlet-clad men, and the flitting forms of fair-haired children as they play at 'Hide-and-seek' in the dim recesses of the hall, amongst the high-backed chairs and 'cramp-corners.'

Then the winter spirits take a flying leap to the cottage homes in the village, and see the firelight gleaming through the little uncurtained windows—the homely supper-table spread, and the rough-handed labourer with his child on his knee, while the wife serves the simple meal.

During the long night-watches in the soldiers' camp, the winter spirits flit round the huge fires and see the ruddy light glow through the chill night-mists, warming the hearts of the watchful sentinels as they pace the weary rounds; or when, later on, boiling their camp-kettles over the blazing logs with faces turned to the 'fiffl firelight,' the spirits hear the talk of home and friends, of sweethearts and wives, of mothers and children, many of whom will never be seen again; and of the brave comrades who have perished by their sides.

On the wings of the wind the winter spirits pass through the air and peer into the 'Tramps' Kitchen,' where the big roaring fires are kept up long into the night—where, in bad weather, these homeless souls can dry their soaking garments, and feel the genial heat of the glowing coals permeate their weary, aching limbs, while the leaping, flickering flames cheer their saddened hearts and sorrowful lives.

The winter spirits wonder why so many dwellers in houses love to shut up every blind, or bar every window with heavy shutters, during the long dark nights of cold black frost and blinding sleet. 'How far that little candle throws its beams! So shines a good deed in a naughty world,' says that 'wise young judge' the gentle-hearted Portia.

When sitting in our pleasant warm rooms, listlessly watching the leaping flames, and hearing the north-easterly winds make wild 'keenings' round the house, or hollow murmuring in the bare branches of the leafless trees, filling the mind with weird suggestions and dreamy fancies, when our loved ones are all safe under our snug roof-tree—let us not forget the homeless wanderer or the weary traveller in the wild wintry weather—let us leave open the heavy shutters, so that the warm, inspiring rays of the firelight may shine through the curtains and blinds, and help those forced to be abroad in the wind and storm to find their way over wide moors or in dark lanes. The eerie cries of owls and night-birds lose their strangeness when any sort of light is near us; and the rushing blasts that drive the heavy masses of clouds along in shapeless heaps,

lose half their gloomy darkness and piercing cold when the glowing light from the flickering fires is seen in the distance. It tells of human fellowship not far off, and human help also, if need be, to those that are in the outside darkness of the stormy night.

Oh, leave a lamp in the window  
To light the gloomy moor,  
When clouds and sky are dark o'erhead,  
And 'stormy tempests' roar.

Oh, leave a light in the window,  
In the dark of a wintry night,  
And show to the houseless wanderer  
A welcome warm and bright.

## RICHARD CABLE, THE LIGHTSHIPMAN.

### CHAPTER LIX.—AGAIN: JACOB'S LADDER.

To Richard Cable, broken and softened, the arrival of Bishop Sellwood was welcome. The bishop was staying at the parsonage, and had walked up to Red Windows to see Cable. When Richard arrived at his gate, he saw the bishop in the garden talking to the girls and Mrs Cable, his kind face beaming with pleasure. He came forward at once to meet Richard, and seeing that something had affected Richard, asked to have a talk with him in the garden-house, instead of going indoors. Then Richard told him frankly all his story, laying most stress on his trouble about Mary, and his fear that he had broken her heart and turned away her affection from him.

'For the matter of that,' said the bishop, 'do not be downcast. The girl is little over seventeen, and though she feels acutely at that age, the feeling is transitory; and before the year is out she will have recovered. It will all turn out for the best. Troubles come on us all, and deepen, where without them there might be shallowness.—And now—about Josephine?'

Then Richard Cable was silent for a few minutes, looking out of the door of his summer-house; but presently he drew a long sigh and said: 'My lord, will you and Mrs Sellwood be with us to-morrow evening?'

'I will answer for her and for myself.' Then, seeing that Cable did not desire further to pursue the subject, the bishop said: 'By the way, Mr Cornellis has played us a nasty trick. He got introduced somehow to Mrs Sellwood's sister, Miss Otterbourne, quite an old lady, and married her. She was pretty nearly twenty years his senior, and she did not survive her marriage long. My boy was to have been her heir; but she had the disposal of her property, and she has left it all to Cornellis, so my son is left out in the cold. It is of course a bitter disappointment to us all, to my wife especially; but—it is all for the best. I hate reckoning on dead folk's shoes; it always leads to disappointment; and in this case I really believe it likely to do good, for Captain Sellwood has been somewhat inert, as he had this Bewdley estate to fall back on. Now, he is thrown on his own resources, and roused to action. Cable—do you remember once how he went over the palings like a greyhound? When roused, he is energetic, but only when

roused. This failure of his hopes has woke him up, and he has returned to India, and I believe will distinguish himself there, for he has famous abilities, which only need calling forth.' Then he stood up. 'All right, my friend. Mrs Sellwood and I will be with you to-morrow evening, honour bright. Wring my neck, if I forget it!'

All next day the Cable girls were busy with the house, decorating it. Their father, full of excitement, urged them on. The bishop was coming to spend the evening with them, and so 'WELCOME' must be written up in letters of green leaves and flowers in the hall. Pots of red pelargoniums and variegated geraniums must be set about to decorate the entrance. A good supper must be prepared, and plenty of lights set ready.

'Let us have all the lamps and candles that can be spared set round the entrance hall,' said Richard; 'and then, with the flowers and the green leaves, it will look bright and welcoming. And—girls, mind you all put on your white confirmation dresses. You are to be confirmed to-morrow; but you must wear them also this evening.'

'Bessie is not here.'

'Bessie will be here.—Mother, mind that her white dress be laid out for her ready, and also that other white dress of satin you spoke to me about.'

'When will Bessie be here?'

'I cannot say.—Do you hear what a storm is raging? Mr Joshua Corye is going to drive her over, and you do not suppose that he will bring her till the worst of the weather is past. If she arrives in the afternoon, it will be well.'

The afternoon passed, and she did not arrive. Towards nightfall, a boy arrived on a moor-pony, without saddle, with a message. 'Please—Mr Joshua was thrown out of the tax-cart, and took up insensible. He's better, and eating and drinking hearty-like now.'

'Well—and is there no further message?'

The boy looked stupid. 'Can't mind what it was,' he said. 'I lost my cap; I couldn't hold the pony in.' He was capless, with his hair flying as shaggy as the mane of the pony. The rest of the message had been blown away with his cap.

Then Richard Cable, impatient, but hardly uneasy, went to his stable and harnessed his cob into a trap he had, and just as he was about to start, the bishop came up. After a hasty explanation, Dr Sellwood said: 'Give me a hand, Cable; I will come with you; I want to tell you of a plan my wife and I have formed.'

Cable helped the bishop in. 'There will be room for all,' he said, and whipped the horse.

'I want you to let Mrs Sellwood carry Mary off,' said the bishop. 'She is a dear sweet girl; and just now is better away from St Kerian. I hinted something of the sort to her, and a twinkle came into her face. There is nothing like change of scene and association for curing a heartache. Bless me! Cable, troubles are like stiles—made to be got over. She shall spend a month or six weeks with us; and you will see, when we send her home to you, she will have freshened up like roses after rain.' The same kind considerate man as bishop as he had been as rector.

'You are very kind,' said Cable, readily touched in his present mood—'every one, indeed, is kind;

I alone seem the one who has been hard and harsh.'

Richard Cable drove by the road, because he could spin along it at a fast trot; and over the moor, with night closing in and with a fog gathering, he would not venture. By the time he reached the *Maggie*, night had set in; but the effects of the storm were dispersing, the mists were clearing, and the sky shining, with its many stars.

'Well,' said Cable, drawing up at the *Maggie* door, 'where are they?'

'What?' asked Corye, coming out. 'Are they not with you?'

Then only did Cable learn the whole story of the accident. Joshua was better; he was put to bed, but vowed he would be up and take a ride next day.

'He's got such a constitution!' explained his father. 'He's been brought up on *Maggie* ale.'

'But—where are Bessie and the other one?'

'That is more than I can tell. They sent Zackie Martin the shepherd after my Joshua, and walked on themselves towards St Kerian.'

'But they have not arrived.'

'Bless you! they are there by this time. Did you not pass them? Which way did you come?'

'By the road.'

'Well, that accounts for your missing them. They went the short way over the moor.'

'But Bessie could not walk so far.—Where did the accident take place?'

'This side of the Long Man. Zackie told them the way and how to reach his hut, where there was a fire; but, I reckon, they tired of waiting, and went on.'

'They have not arrived. Bessie could not walk so far.'

'Go home over the moor; you'll find them at Red Windows, sure as boys go to stables.—It's a mercy my Joshua wasn't more hurt. He was quite stupid for an hour.'

Nothing more was to be got out of the inn-keeper. Cable became seriously alarmed. He asked for a light for his lamps, and started over Carnvean Down. He knew the way; he had ridden it and driven it scores of times. He was silent now, and the bishop respected his anxiety. Trails of fog still drifted over the high moorland, but they were speedily passed through; they were lifting in the cold night-air. Occasionally, Cable shouted, but received no answer.

'There is the Long Man,' he said, pointing with his whip to the stone, that rose about sixteen feet above the turf. 'If they are wandering anywhere about, they will see the lamps; we must not go too fast.' Nevertheless, ever and anon Richard urged on the horse. He was nervous; he did not know what to think, whether they were lost on the down or had pressed on. 'You see,' he said, 'Bessie could not go fast. She—that other—must tarry for her; so we may find them at home. I should have wished to have been there to meet them.'

They were an hour crossing the moor. As they came to the descent—'Look!' said Richard. 'Before I started, I told them to light a candle in every window up-stairs. One, two, three, four, five, six—seven lights.'

'Yes, I see; quite an illumination,' said Dr Sellwood.

'And I told them to have a blaze of lamps and candles in the hall, that when they came in out of the dark, it would be to welcome light and warmth. Please God they are safe!'

'Amen!' responded the bishop.

When they came to the gate, which was open, Cable fastened his horse to it. 'I will not take him out till I know they have arrived,' he said, and walked on over the gravel path to the foot of the flight of stone steps that led to the front door. Then, all at once, he, going before the bishop, uttered a cry, and stood still.

'What is the matter?' asked Dr Sellwood, pressing forward.

They saw in the dark a black heap at the foot of the steps.

'It is they—it is they! They are dead!' cried Richard, quite unmanned and beside himself.

Then the bishop ran back to the tax-cart and removed one of the lanterns, and came with it hastily to where the heap lay. Cable was as one frozen to the ground, unable to act through overwhelming terror and sorrow. The bishop knelt, and drew back a thick shawl; then the light of the lamp fell on the face of a child, and the child moved, uttered a moan, opened its eyes, and turned them away again.

'It is Bessie!' groaned Cable.

'She is alive,' said the bishop. He gently disengaged her from the arms of Josephine, and for a moment laid her on the ground; then he felt the pulse and looked at Josephine. Then he took up Bessie again, and said in a low, shaking voice: 'Cable—I will carry the child in. She is in no immediate danger. It is other with Josephine—your wife. I must get your mother to bring her a cordial at once. There is hardly any pulse, scarcely breath left. She is sinking from over-exhaustion; and I do not know whether she will live or not. You stay by her; you alone can save her. The soul is fluttering on her lips to depart; try to stay it.—I will send for a doctor; but her fate will be settled one way or the other before he comes.' He had set the carriage lantern against the first step, the end, unperceived by him, was on the shawl, and as he lifted Bessie, he drew the shawl away and upset the lantern, which was extinguished. Holding the little crippled girl in his arms, he ascended the flight of steps and struck at the front door, that flew open; and he was dazzled with the blaze of many lights and the sight of the young girls standing there all in white. 'My dears,' he said, 'I have Bessie; she is safe. Your father is below; he wants light.—Quick! Go to him, and—kiss your mother.' Then he pushed past them with his burden, calling for Mrs Cable.

Below, in the darkness, at the foot of the flight of stone steps that led up to the house, was Richard Cable, half-kneeling, half-sitting, staying up Josephine in his arms, holding her to his heart, trembling, sobbing, crying out of the depths of his heart to God to help him. Then, in choking voice, with a struggle to force the tones, as he held the hardly conscious form in his arms, he began to sing the melody—not the words, which he did not know, but the air of the mermaid's song, swaying her to the cadence of the tune, as if she were a babe he was hushing to sleep. Was he lulling her to her eternal sleep? Was she dying in his arms? And as he

thus sang and swayed her, down the stairs from the brilliantly illumined hall came the six girls, all in white, and each carried a light—Mary first, then Effie, then Jane, Martha next, and Lettice, lastly Susie. In their haste to obey the bishop and to assist their father, each had caught up a light; and so, each carrying a light, in the still air, under the stars of night, the six girls in white came down the steps to where their father held the exhausted Josephine. They came round her, each holding her light. Josephine opened her eyes feebly, scarce conscious that she saw aught; then Mary stepped timidly up to her and kissed her, and passed on; then Effie, and she went by; and Jane kissed her, stooping, and holding her light; and Martha next; and after her, Lettice; and last of all, little Susie.

Then Josephine's eyes opened wide; the soft warm kisses of the children and the light roused her falling spirit, and the open eyes looked, no longer with the glaze of death on them, but with a far-away, searching, earnest longing—*upwards*, into the dark sky, set with ten thousand points of light.

'Josephine!' said Richard Cable—'Josephine!' It was the first—the only time he had uttered her name since they parted on the night that he sought her at Brentwood Hall.

She did not answer—she had not strength to answer; but a slight movement was visible on her lips; and as the children stood with the circle of light round her, and Cable looked down into her white upturned face, he saw water rise in the eyes that had been dry, and brim them, and run over the long lower lashes, but—they never fell, for he stooped and received them on his lips.

Then the bishop appeared with something Mrs Cable had given him for Josephine to take whilst she attended to little Bessie. 'She may be carried in now,' said Dr Sellwood. 'Richard has brought her back from the brink of the grave.'

#### CHAPTER LX.—TWICE MARRIED.

'And now, sir—I mean, my lord—I shall venture to ask you to marry me again,' said Richard Cable to the bishop, the evening after the confirmation.

'Good gracious, Cable!' Dr Sellwood started.

'Well,' said Cable in his leisurely, resolute way, 'now that Josephine is recovering, I should like to be married again.'

'Married again!' Dr Sellwood's rosy face became mottled.

'Well, my lord,' said Cable, 'you see—before, it was Josephine married me; and now, I want to marry her.'

'But you are married. It can't be done.'

'Why not? It is not bigamy, is it, to be married twice to the same woman?'

'Bigamy—good gracious!—it looks something like it; and etymologically'—

'I beg your pardon, sir—I mean, my lord—I do not understand.'

'According to the derivation of the word, it does make it a case of bigamy.'

'But I cannot be punished for it—can I?'

'No; hardly that.'

'Or you for marrying me again?'

'No; hardly.'

'Then, bigamy or no bigamy, I wish to be remarried.—You see, it will be good several ways. Folks at St Kerian never knew that Josephine was my wife; and they would ask questions and talk, and want to worry out all our past troubles and differences, if I were simply to declare we had been married, but separated. Whereas, if we get married here, in the church, publicly, no one will think to ask any questions, and there will be no nose-poking into the past, to cause Josephine and me annoyance.'

'There is something in this.—I will turn it over in my head. Of course, the registers could not be used, but the ceremony.—I will write and ask my lawyer.—How is little Bessie?'

'Failing,' said Cable. 'I am about, I suppose, now to build up anew my domestic life, and I have laid the foundation in my first-born, and shall set up the gates in my youngest.'

'As for Mary,' said the bishop confidently—'no such thing. She'll get over this matter much more speedily than you imagine, and not a bit of her love to you will be lost. Take my word for it, all will come right in the end. You are going to lend her to us for six weeks.'

'Why!' exclaimed Richard; 'good gracious me! it must be for another reason.'

'What must be?'

'My bigamy.'

'Why? What is the second reason?'

'All is prepared for it—to the bridesmaids' dresses. My daughters have their confirmation garments, and Josephine her white satin wedding gown, laid out up-stairs all ready.'

\* \* \* \*

Two years have passed. Richard Cable is the Richard Cable of old in gentleness, tenderness; all the sullenness and bitterness have passed away completely. But he is not the Richard Cable of old altogether, for there is a refinement of manner about him which he lacked when our story began and we first encountered him. But Josephine is very much altered from the Josephine with whom we made acquaintance on the lightship, now full of love and forbearance, and that ineffable sweetness and charm which only self-conquest and suffering can give.

'Richard,' said she one morning at breakfast, 'what is to be done?—Now that my poor father is dead, Bewdley comes to me. I am continually coming in for estates to which I have no right.'

'Do you remember how the bishop told us we were to cease knocking our heads together about Hanford? Now we have that, we do not want more.'

'No; I have no right to Bewdley. I shall make it over to Captain Sellwood, just as I made over Hanford to you.'

'Perhaps he will act as I did.'

Josephine sat dreamily opening the letter just arrived by post. All at once her interest was roused, her colour mounted, and her eye sparkled.

'What is it, Josephine?'

'This difficulty settles itself.'

'How so?'

'Look, Richard! Here is a letter from Mrs Sellwood.'

'How is Mary? When is she coming back? She spends half her time with the Sellwoods.'

'Look, Richard!—Mrs Sellwood—— But do

read, Richard.' She sat looking eagerly in his face as he deciphered the not very intelligible writing of the bishop's wife. Then his colour came and his eyes sparkled.

'Well,' said Josephine, 'does it not settle itself?'

'Not at all. Bewdley is yours, and Mary is my daughter.'

'Nonsense, Richard. There is no mine and thine between us, but all things are in common.—What do you say?'

'The bishop was right. Mary is consoled for the loss of Walter Penrose.'

'He is right. He always said: All will turn out well in the end.'

'And what can be better than that Captain Sellwood, who has come back from India, should have our dear Mary, and with her, that we should give him Bewdley?'

THE END.

### WHY IS WHEAT SO LOW IN PRICE?

A SIMILAR question was asked, and answered, about Sugar in No. 195 of this *Journal*; and those of our readers who are themselves, or who have friends interested in agriculture may wish to know whether or not natural causes have depressed the value of our great cereal.

Wheat was for a long period the principal crop on good land in Britain, and would have continued to be so but for a variety of circumstances which have tended to render its production on many farms unprofitable. When the production of any commodity ceases to be remunerative to the producer, the natural consequence follows in the restriction of the produce. That this economic law has affected the growing of wheat, a very few considerations will make obvious. Previous to 1846, the price of wheat and other cereals was good, because they were subject to Protective laws; but with an increasing population at home, for whose wants our own agricultural produce was insufficient, and with heavy duties on all grain entering our ports, the result came to be a kind of dearth of the staple article of food, entailing great want and suffering upon the poorer portion of our population. But with the repeal of the Protective laws, another set of forces began to operate. Our ports were flung open to importers, and among other things, wheat gradually began to be thrown into our markets at an increasing ratio, America soon becoming the chief contributor. For the twenty years following, the effect did not tell heavily against the home-grower, because the high rates obtained for all agricultural products during and after the period of the Crimean war, enabled our farmers to hold their own. And not only so; the farmers became so prosperous, that rents swiftly rose, till they doubled and sometimes trebled those of previous years. In the meantime, the prosperity of agriculture at home was shared by the agriculturists in America as well, with the consequence that the area of wheat-production was largely increased in that continent.

Here, then, were our home-farmers face to face with two dangers. The first, high rents, was due to competition among themselves; the second, the increased supply of American wheat, was due to the high prices obtained in the British market during those prosperous years which made it practicable and profitable for the Americans to ship a more and more increasing supply of wheat for the wants of this country. So long as our farmers obtained, even in spite of this competition from abroad, a price for wheat large enough to pay the expense of cultivation and the increased rents now exigible from them, with a fair margin of clear profit over and above, things went very well. But by-and-by, and as a necessary result of the operation of a simple economic law, the amount of American wheat sent into our ports increased to such an extent that home prices began to fall. But while the markets fell, the rents remained stationary; and here it was that our farmers began to feel the pinch. In the United States, the wheat area, between 1870 and 1880, rose from a little under nineteen million to something like thirty-eight million acres. In other words, the power of wheat-production in the States had in those years doubled itself. In other countries—Australia, the Bombay Presidency, the Native States of India, and elsewhere—there had at the same time been a similar increase in wheat-production, and in a short time our markets became glutted with the united imports of these. So long as our farmers could obtain from forty to forty-five shillings per quarter for their wheat, they could struggle on, though not in some cases without the help of the landlord in the shape of reduced rents. But when the price fell even below forty shillings, a new set of circumstances had to be faced.

And not only did this later fall in prices affect the British farmer, it affected the American grower also; and for some years past, as a consequence of this, the area of land for wheat-production has decreased both in the States and at home. In this country, since 1876, the area of the wheat-crop has decreased by nearly eight hundred thousand acres, or about twenty-five per cent. of the whole. Yet even this, conjoined with the limited production in the States, has not sufficed to revive prices. At home, rents have gone down, and so have wages, yet the growing of wheat does not pay the farmer. In the States, the amount of production has been curtailed, the carriage to the seaboard and the ocean-freightage have been reduced, and still prices do not come to a point which makes exportation on the old scale profitable. The American farmer, indeed, is crying out that he cannot grow the article to sell in London at thirty shillings per quarter, and that Chicago is no longer mistress of the situation, as she is being undersold by the produce of the far East.

And this brings us to point out a chief element in the solution of our question, why wheat is so low in price. India possesses large tracts of land suitable for wheat-growing, and the area actually under this crop in 1886-87 is given as twenty-five

million acres, with an out-turn estimated at over six million tons. Here an anomaly presents itself. While the European and American farmers have to accept much lower prices than they used to do, the Indian grower is getting nearly as much as ever for his produce; and the opening of the country by railways is enabling him to send it to the ports in yearly increasing quantity. The explanation of this is, that he is paid in *silver rupees*, which have the same value to him as ever, being the currency and standard of value in his country. Silver, however, is with us only an article of *merchandise*, not, as gold is, a standard of value; and at present it can be bought at a decline on its value prior to 1873 of thirty per cent., and sent out to Bombay or Calcutta to pay for purchases of wheat. A small charge for coinage is made at the Indian mints; but it is found in effect that eight ounces of silver will enable a merchant to lay down in London one quarter of wheat. If the silver costs him five shillings per ounce, as it did on the average before 1873, the wheat might be sold in London at about forty shillings per quarter; but if it costs (as it does to-day) only three shillings and eightpence per ounce, then he can afford to sell his Indian wheat in the London market at twenty-nine shillings and fourpence.

To put the matter in another way: a Bombay merchant consigns his wheat to London for sale, and it is sold in Mark Lane at, say, thirty shillings per quarter. After deducting five shillings to pay freight and expenses, there would be twenty-five shillings left with which to buy silver, or, what amounts to the same thing, a bill in rupees on Bombay. At present exchange-rate of one shilling and fivepence for the rupee, there would be remitted seventeen rupees eleven annas for each quarter of wheat; whereas, if exchange were at the old rate of two shillings, only twelve and a half rupees could be sent. The effect of the latter remittance would be that if his wheat cost him about seventeen rupees in Bombay, the Bombay merchant would sell no more in London until the price rose to forty shillings. It should be, therefore, plain to our readers that India has a considerable influence on the price of wheat in England, and that this is owing to the fall in the value of silver. A further fall in the value of the metal might further depress the price of wheat, as twenty-four shillings per quarter would recompense the Indian grower if silver fell to three shillings per ounce.

But while the present price of wheat is, as we have shown, injuriously affected by the imports from India, yet it must be remembered that there are various counterbalancing circumstances which will always act so as to prevent a much further decrease. For instance, if India could have sent us all the wheat we require for home consumption over and above our own production, its influence upon our markets would have been predominant. But as it is, out of fourteen million quarters of wheat imported from abroad last year, only two and a half millions came from India. It will be obvious, therefore, that, unless the area of wheat-production in India is largely increased, all that its imports can do is to prevent American and other producers getting so high a price as they formerly obtained in our markets. On the other hand, the fact that India cannot give us all we require,

and that we are obliged to draw upon the States, Australasia, and elsewhere, for a further supply, will prevent the price from sinking to the lowest point at which wheat can be sent to us from India. By this action and interaction, therefore, of conflicting interests, a certain amount of stability is brought about; though the resting-point is, we fear, much below what the British farmer would require to render wheat-growing once more profitable.

Having pointed out that at present India cannot supply us with all the wheat we require, it may naturally be asked if she is ever likely to be able to do so. It is a difficult question to answer. It must be remembered that India suffers grievously from time to time from droughts and from excessive rains, and the recurrence of these periods, each equally hostile to the growth of wheat, will, it is believed by many, place a certain check upon its production. But Professor Wallace, of the Chair of Agriculture in the University of Edinburgh, who has recently returned from a six months' visit to the agricultural districts of our Eastern Empire, is of opinion that the production of Indian wheat is more likely to be steady than fluctuating, and that it will form a substantial item in our country's imports. 'It was not, however,' he said, 'wheat of the quality wanted in this country, being impure and deficient as regards gluten.' We have, therefore, two opposing opinions as to the likelihood, or otherwise, of a steady increase of wheat importations from India.

At home, however, the position is sufficiently embarrassing. From an inquiry made in 1885, by the *Mark Lane Express*, the fact was brought out that wheat could not be grown in England under an average cost of thirty-six shillings per quarter. If it is produced at a less cost than this, the quality of the soil must be excellent, the rent moderate, and the farmer must be able to sell the straw. It should be borne in mind, in estimating the ability of other countries to undersell us, that the average yield in England is double that of the United States, and treble that of India. We have also our own wheat at our doors, whereas India must send hers perhaps a thousand miles by rail and six thousand by sea. American wheat has the same obstacle of distance to contend with; and although a great reduction in railway and shipping rates has occurred during the last few years, the transatlantic growers get so little for their crops, that they are in the greatest possible financial distress. So badly off were the farmers in Dakota last winter, that the State legislature decided not to collect the taxes.

The difficulty brought about by the lowered gold-value of silver is one that will have to be faced some time or other. A Gold and Silver Commission has at present under its consideration, among cognate subjects, this very question of currency, but whether they will be able to suggest an efficient remedy is not yet considered as beyond the region of doubt. Mr Goschen, recently waited upon by a deputation on the subject, spoke guardedly, and confessed that the difficulty, even to skilled economists and financiers, was one of no slight moment. He seemed to prefer waiting for the Report of the Commission before committing himself to any opinion, either

in favour of bimetallism or otherwise. It is to be hoped the Commission will be able to suggest some way out of the difficulty, which is a very serious one for our agricultural population.

## THE OLD SECRETAIRE.

A CHRISTMAS STORY.

CHAPTER V.—CONCLUSION.

AFTER a long and earnest consultation, lasting almost till daylight, it was finally decided to make another expedition to the Haunted Chamber, with the object of discovering, if possible, any secret passage existing thence to another part of the house; only Warren stipulated that nothing further should be done until he should have completed his little domestic drama, the main portion of which had been written, only a few finishing touches being required to make it ready for distribution among the actors. And so far his prognostications having proved correct, Walter Secretan was content to leave the matter in his friend's able hands.

It was, of course, impossible to do anything on Christmas Day, even to get out to church, for the weather had taken a change in the night, and morning dawned with a strong wind and snow falling heavily. A kind of informal service was held in the drawing-room; and afterwards, for lack of other amusement, the party assembled one and all in the hall to listen to Warren's comedy, which was declared to be, with one or two trifling alterations, exactly the thing required.

'There is one thing we want now,' Warren observed, when parts had been chosen and the manuscript had been given into willing hands to copy—'the suggestions for the *tableaux vivants*. Can't some of you ladies suggest something original? We are all tired of Lady Jane Grey, Mary Queen of Scots, and Joan of Arc.'

'When are we to be ready for the first rehearsal?' Althea Wynne demanded. 'It will take me quite a week to learn my part.'

'In that case, we shall be reluctantly compelled to cut you out,' said Warren firmly, 'because the first rehearsal—of which I propose to have three—will take place in this hall to-morrow night at eight. Why, the great charm of private theatricals is in half-knowing your part, and finding your fellow-performers worse than yourself.'

'Mr Warren is quite right,' said Constance Lumley promptly; 'and so far as utter ignorance of the book-part is concerned, he shall not find me wanting. Besides, is there not an individual known as the prompter?'

'Most admirable of amateur actors, being least seen and most heard!' Warren laughed.—'I suppose that is settled then.—And now for the *tableaux*.'

'What about Queen Eleanor and Fair Rosamond?' Edith Lucas suggested. 'Or perhaps—' 'The Eve of St Bartholomew, as interpreted

by Millais,' suggested a demure voice in the background—an inspiration treated with contemptuous silence.

'What you want to do is to show off your dresses and look nice,' Warren observed. 'We seem to have everything to hand; only there is a plentiful lack of ideas, as Mrs Malaprop would say.—Now, do make up your minds.'

Finally, the choice fell upon three—the trial scene from the *Merchant of Venice*, after a struggle for the part of Portia; one founded upon the most pathetic scene in *Enoch Arden*; and finally, the play-scene from *Hamlet*—with, as Warren observed, the full strength of the company. Once decided, there was a general exodus on the artistes' part to make selection out of the rifled treasures of the west wing as apparel on the eventful night.

'Now is our time!' exclaimed Warren, when the last of the fair performers had disappeared. 'Old Brookes is safe in the billiard-room for the next half-hour, marking a game between the colonel and your father.—Get a couple of helpers out of the stable. I want that old secretaire out of the Haunted Chamber—it will be useful as an article of stage-furniture.'

'Have you made up your mind what is to be done?' Secretan asked, when he had despatched a messenger for the desired assistance.

'Almost. I am going to try and frighten the man—work upon his fears, if possible.—Mind you, not a word of this; I want it, if possible, kept a secret. I do not want anything we know, or what we are going to do, to be guessed even by the other players. I suppose you intend to have the servants in to see the performance?'

'Of course.—Where else should we get our audience?'

'That's exactly what I wanted to know. "The play's the thing wherein to catch the conscience of the king"—only, in our case the drama will play quite a secondary part in bringing that wicked old rascal to book.—*Allons*.'

'I suppose you know what you are talking about?' Secretan observed. 'For the life of me, I don't.'

'If you knew a little more of the divine bard, you would,' Warren observed airily. 'Perhaps it will dawn upon you presently.—However, here we are.'

Daylight made but little difference to the apartment. Upon everything lay the melancholy of decay—the carpet torn, and faded by the rust and dust of half a century. In the large open grate, a handful of wood-ashes still remained, with some charred embers, the remains of papers partially destroyed. Over the handsome cornices, once gay with gilt, a fine powder had settled, and great spiders had spun their nets.

With the assistance of the two stout helpers, they raised the old secretaire, though a lever had to be employed. As it gradually slid along, Warren's foot slipped through an open space. He recovered himself with a great shout, for, as the desk gradually moved away, an open trap-door stood revealed.

'The ghostly passage!' he exclaimed, whilst Secretan and the helpers looked on open-mouthed. —'This is the way he must have gone. You see,

it is exactly behind the secretaire, and protected by this movable back. Look!'

He pointed to the opening, where, at that moment, a head and shoulders had appeared. It was Silas Brookes, a look of deadly hate and vengeance upon his face, in the eyes fixed upon Warren with such rancour. As he stepped into the apartment in profound silence, they saw that he wore the masquerade dress of Arundel Secretan. The trembling hand was laid upon the rapier; but ere he could draw it, Warren, reading the mischief in his eyes, was upon him, and bore him to the ground.

'You two go and fetch your master and Colonel Lucas,' he said to the dazed helpers. 'You need not trouble to return again;' and the half-stupefied servants hurried off to obey the stern command.

There was not a word spoken till the host and his guest entered. Brookes's eyes wandered from one to the other in a defiant, hunted fashion: he knew that he was found out. But with his iron nerve, he was not the man to cry out for either mercy or forgiveness. Utterly amazed, the Squire looked to Warren for an explanation.

'Allow me to introduce you to the family ghost,' commenced the triumphant dramatist, 'as interpreted by this faithful servant.—But I forgot that you are entirely in the dark as to what has transpired. Call to mind, in the first place, your family legend, and the part one of my family played in it. You gave me permission to search these rooms, and thereby hangs a tale.' So saying, Warren related all he had seen and heard, ending his narrative by placing in the Squire's hand the fateful letter dropped by the ghost in his flight on the eventful preceding evening. As he read, his usually benign features became stern and hard. To the end he perused it, and then turned to Brookes, speaking in a voice clear and metallic, such as the ancient servitor had never heard before.

'Where have you hidden this money, you scoundrel?' he demanded.

There was no answer to the thrice repeated query. By this time the news had spread through the house, and one by one the visitors had joined them. Mr Warren threw the letter to Brookes, who read it slowly, ponderously to the end. His face turned to a pale ashen gray; he clutched at his throat, then the words burst from him, as he threw himself upon his knees at his master's feet, covering his face with trembling hands: 'I never meant to wrong my master—never! never! But the temptation. I found out Mr Edgar Warren; I got the money. It was when his valet told me that he was dying, the temptation overcame me. In London, I changed the notes into gold. I brought it down here. Then I saw my dear master. I lied to him, and he died by his own hand. Oh! if I could have only known—if I could have only guessed! I thought myself safe.—After my master's death, I was afraid to speak. The servants talked about his ghost. That was my opportunity. I had hidden the gold. Bit by bit I carried it here into this very room. I knew I should not be interrupted, so gradually I got it here—hidden, all of it safe. To keep it safe, I have played the ghost for all these years. But I have not been dishonest

—it is all there. I intended to confess before I died; I intended to be honest. I am no thief, so help me heaven!’

‘Where?’ Warren demanded impatiently—‘where, man?’

‘In the desk behind you, in the old secretaire—every penny of it. And now perhaps you will be content. He rose to his feet, as if to quit the room. The Squire signified to Warren to let him pass; and so he went without another word.

The ancient piece of furniture, now such an object of interest, was speedily prised open, and a breathless knot of spectators gathered round. The head of the desk had a circular top, which, upon being opened, disclosed a nest of drawers, each full of papers and memoranda, the drawers down either side being filled with a mass of odds and ends, but no signs of money. It was certainly strange. Apparently, there was no space to be accounted for, till a rule was applied to the side, and it was discovered that, behind the nest of drawers, a considerable space yet remained. They drew out every one of the tiny drawers, but no sign of an opening could be seen. Walter Secretan, in a fit of impatience, jammed the head of a hammer against the frail wood, and as he did so, the fabric gave way. Placing his hand in the aperture thus formed, he drew out one by one seven leather bags, each fastened with a small padlock, and a flat shabby-looking case, which he opened.

There was a cry of delight from the ladies, as a magnificent diamond necklace flashed and shimmered in the light, a quivering fire of stones in a tarnished gold setting; but no damp and decay could pale the gleaming jewels. As they passed from hand to hand admiringly, Secretan employed himself in cutting the top off one of the leather bags; and plunging his hand in, he drew out a score or two of English gold coins. When they came to count it, it contained two thousand four hundred pounds. A careful addition of the remaining bags brought up the total to sixteen thousand two hundred and eighty pounds in good English money, which, including the necklace, must have represented close upon, if not quite, the sum of twenty thousand pounds.

There was a kind of stupefied silence for a few moments; then every one seemed to find his voice at once, speaking in a clamorous din.

‘Warren, I thank you,’ said the Squire warmly. ‘I owe you a deep debt of gratitude, so deep that I scarcely know how to repay you.’

‘I shall soon put you to the test,’ Warren replied, significantly.

\* \* \* \*

‘Well, of all the callous scoundrels!’ cried the colonel, when he had sufficiently recovered to speak. ‘Fancy having a man like that under your roof! I would soon make short work of him.’

‘Gently, gently,’ cried the Squire good-humouredly. ‘Remember the poor fellow has suffered terribly; and remember Christmas time, colonel. Peace and good-will to men. If he has repented, truly we must not withhold our forgiveness.’

‘Well, if he hadn’t been a rogue, you would be some thousands worse off,’ was the practical reply. ‘It’s an ill wind that blows nobody luck, Secretan.—Eh, Warren?’

‘It shall blow some one luck,’ said the Squire, turning to Warren significantly. ‘Come into the smoking-room and talk it over.—So, this is what a snowy Christmas comes to, is it? They say no snow no matrimony, and in this case’—

‘History repeats itself,’ said Warren calmly, indicating Walter and Edith Lucas.

They had the hall to themselves, both gazing out over the snowy landscape, her head upon his shoulder, his arm wound round her slender waist.

‘Why, bless me!’ exclaimed the colonel, staring through his eyeglass, ‘it’s my daughter, and your son, Secretan.—And all this time I was under the impression she was in love with somebody else.’

‘A mistake, sir,’ said Walter lightly, ‘as I hope to convince you presently. You see, General Ramsden is all very well; only, unfortunately, Edith does not love him.’

‘Unfortunately! you ungrateful young rascal! Why, bless me! in that case, why didn’t she say so at once? I am sure it was no wish of mine.—But you young people always delight in making mysteries of things, and we have had mystery enough for one day.’

‘Well out of that, darling!’ said Walter, as the elders disappeared. ‘But I am just cynical enough to believe that he would not have been quite so amiable, if it had not been for the discovery in the Old Secretaire.’

## OXYGEN STARVATION.

IF we are asked which of the many necessities of life is best entitled to the chief place, we must surely reply, Oxygen. This gas forms about one-fifth of the bulk of the atmosphere, and our wants are supplied by the act of breathing, so regularly and ceaselessly performed by every one. It is possible to live for a long time without the protection of a house or of clothing; it is even possible to live for many days without food; but if we are deprived for only one or two minutes of oxygen, the consequences are serious, and may be fatal. This is perhaps one reason why, of all things that our bodies require, oxygen is the only one the regular supply of which does not depend upon our own attention. The pangs of hunger and of thirst warn us when food and drink are necessary, but they can only be satisfied by our putting forth conscious effort. A man may be hungry; but if he is too lazy to seek out food and raise it to his mouth, he will starve. But it is not so with oxygen. We have power, it is true, temporarily to stop our breathing or to increase its rapidity by an act of will; but even when we forget all about it, the breathing continues.

This is one of the many mysteries of our being, always before us, but seldom thought of; and yet it is very striking. This frequent and important act of our daily life has not been entrusted to our care, but has been so arranged for that it is performed every three or four seconds from the moment of birth until death, without requiring

one thought from us. The breathing apparatus never sleeps.

Again, oxygen is so closely connected with the great vital processes upon which our growth and daily energy depend, that food itself is useless unless accompanied by a large supply of it. Indeed, when the quantity of oxygen which a man consumes in his lungs daily is calculated, it is found to be greater in weight than all the dry food he requires during the same period.

Yet again, if we wish a house and clothing and food, we must work for them; but for oxygen there is nothing to pay. It is free to all, and lies around us in such abundance that it never runs short.

Here, then, we see every means taken to insure that all our demands for oxygen shall be freely and fully met, and yet we are assured by medical authorities that a very large proportion—some say one-fourth—of all the deaths that take place is caused, directly or indirectly, by oxygen starvation. Now, what unfortunate circumstances prevent so many persons having a sufficiency of this all-important gas? The chief one undoubtedly is congregating in towns. Instead of living in the country, where every household might have a large free space of air around it, we draw together, for the convenience of business, to great centres. There the houses are crowded closely together, often piled one on the top of the other, so that, instead of an over-abundance, there is only a limited quantity of air for each. This is made unfit for the support of life by the very act of breathing; the impurities are increased by the waste products of manufactories; and oxygen is destroyed by every fire and lamp and gas-light. The winds and certain properties of the atmosphere constantly remove much of the impure air and bring in a pure supply; but the crowding together in many parts of a town is so great, and the production of poisonous matters goes on so continuously, that instead of each breath containing its full proportion of oxygen, the place of that gas is taken up to some extent by what is actually hurtful to life. When this is the condition of the atmosphere outside the dwelling, it is necessarily much worse within it, for there the displacement of impure air by pure cannot take place so rapidly. The consequences are as already stated. Large parts of our town populations never have sufficient oxygen; their lives are feeble and full of suffering, and numbers die before their time.

Such facts are painful to contemplate, but a knowledge of them puts the wise man on his guard, and he may do much for himself. In the choice of a house he will remember the advantage of a great air-space around it, and of plenty of space within it, so that bedrooms may not be overcrowded. Or if a large house is beyond his means, he will take care that the rooms are not crowded with furniture, for every piece of furniture excludes an equal bulk of air. When he enters the house, he will see that at all times as much fresh air from the outside is admitted, by means of open doors and windows, as can be allowed without inconvenience from cold; and as

often as possible he will have a blow through, to clear out all odd corners where foul air may linger. Pure air and good food make pure blood, and only pure blood will give good health.

## THE OLD WAY AND THE NEW.

### CHAPTER IX.—CONCLUSION.

DURING the solitary watches of the night, Mrs Roding's thoughts were mostly with her husband. When should she see him again? What dreadful thing had he been guilty of, that necessitated his sudden departure after dark, and unknown to any one? Vague, sickening fears of some terrible misfortune—all the more terrible because its proportions were unknown to her—haunted her all through the dark hours. She welcomed the daylight, when at length it came, as if it were a friend.

About half-past nine, Ruff sent to inquire whether she was at liberty to see him. It was strange how glad she felt at his coming. Half her troubles seemed to take to themselves wings as he walked in with his bright smile and clear resolute eyes. She advanced to meet him, and held out her hand frankly, blushing a little as she did so, for the remembrance of the past was still upon her.

'I am glad you have come, Ruff,' she said, 'because I have a letter for you which your father left with me last night. He—he has gone away, Ruff; circumstances compelled him to go. But the letter will no doubt tell you everything. She choked back a sob, and then sat down and waited while Ruff read the letter.

When he had come to the end of it, he slowly refolded it, looking at her with grave, sad eyes as he did so, but not giving utterance to a word.

'He has told you more than he told me—I feel sure he has,' said Mrs Roding with a quaver in her voice. 'I neither know why he went away so suddenly, nor where he has gone. I suppose, I may take it as a fact that we are ruined. Your father said I was to rely upon you, and be guided by you in every way. Of course, his wishes are sacred with me; and in any case, in this dreadful state of affairs I should neither know what to do nor where to begin. I am but a poor, weak woman, Ruff, and I must leave everything to you.'

'Rather different this from the Mrs Roding of other days,' was Ruff's unspoken comment. Then he said aloud: 'That my best efforts will be at your service, you may make yourself quite sure, Mrs Roding. Still, I am only a painter, and know little or nothing of what are called business matters. Don't you think that, under the circumstances, it would be a wise thing to take Grandad into our counsels and obtain the benefit of his experience?'

Mrs Roding's eyebrows lifted themselves in sheer astonishment. 'Call in Mr Roding, senior! Why, he's verging on his second childhood.—Of what possible assistance could he be?'

'Grandad is shrewder than you think, Mrs Roding. In any case, his experience would be invaluable to a duffer like me.'

'Just as you please, of course,' she answered

with a shrug. 'Matters are left in your hands, not mine.'

Without more ado, Ruff rang the bell. 'Ask Mr Roding, senior, if he will oblige me by stepping as far as this room,' he said to the servant who answered the summons.

Five minutes later, Grandad's tall, gaunt figure stood framed in the doorway. After bowing gravely to his daughter-in-law, he looked inquiringly at Ruff. Mrs Roding did not speak. The old leaven in her was at variance with the new.

'Come in, Grandad, and take a seat,' said Ruff cordially. 'We want a little of your advice.'

Mrs Roding screwed up her lips; it was all she could do to resist saying: 'You may want this old man's advice, but I certainly do not.'

'You are welcome to it for whatever it may be worth,' answered Grandad as he took the proffered chair. 'But what's your difficulty?'

'Before going into details, it may be as well that you should read this,' said Ruff as he handed him his father's letter.

Grandad set his spectacles astride his nose, and read the missive through with his usual deliberation. 'A bad state of affairs, very bad indeed,' was his comment as he gave the letter back to Ruff. 'What do you purpose doing?'

'That's just the point where your advice is needed. For my part, I must confess that I'm thoroughly fogged. With my father and Grigson both gone, how will it be possible to find out the exact state of affairs?'

'We must begin at the beginning,' said Grandad coolly.

'That is, if we can find a beginning,' answered Ruff.

'If we can't find one, we must make one. In my opinion, we had better make a start here—that is to say, we had better endeavour to obtain an estimate of the private liabilities before dealing with the business ones.—Does my suggestion fall in with your views, Matilda?'

She only half apprehended his meaning. 'Yes—yes; I suppose so. No doubt, you know best,' she answered in some confusion. She could not recollect when he had last called her by her baptismal name; why should he do so to-day?

From one of his capacious pockets, Grandad produced a memorandum book, and from another a stump of lead-pencil. 'It may be as well to put down the figures as we go along,' he said.

The process took a little time, for Grandad was one of those slow, elaborate writers who cannot bear to be hurried. When he had set down the total, and had verified it by going over the addition a second time, he took off his spectacles and leaned back in his chair. Looking Mrs Roding straight in the face out of his deep, cavernous eyes, he said: 'Perhaps it would interest you to be told the sum-total of this little account?'

She was powerless to answer him.

'The figures I have just taken down,' he went on, 'represent an aggregate of twelve hundred and ninety-four pounds six shillings and tenpence.'

'Can it be possible!' gasped the helpless woman.

'And this forms only a tithe of Matthew Roding's responsibilities. These, his private debts

—although not the whole of them—amount to so many hundreds of pounds. His business debts, I have reason to believe, represent nearly as many thousands. And yet, only three years ago, he started afresh in life with a balance of ten thousand pounds and a business unburdened with debt or liability of any kind. It is strange—it is passing strange.' He breathed on his spectacles, and began to rub them with the silk handkerchief he reserved for that purpose. He had spoken gravely but dispassionately. There might be an echo of sorrow in his voice; there was none of anger.

Some minutes elapsed before Mrs Roding could sufficiently command herself; at length she said: 'That we are ruined, I am quite aware, Mr Roding: my husband gave me to understand as much as that before he left home. But if he is to blame—and who can say that he is not?—am not I to blame also? I have not been the wife to him that I ought to have been. Knowing, as I did, his eager, sanguine disposition, his buoyant nature, which nothing can long repress, I ought to have restrained him, instead of urging him on by my example in the mad course he was pursuing. Had it not been for my extravagance and insensate vanity, had he seen that I was determined not to follow in his footsteps, it may be that he would have turned back before it was too late, and this catastrophe might never have come about.' She turned aside to hide the tears she could no longer restrain. 'Oh, Mr Roding, you cannot tell, you do not know, how unhappy I am!' she presently exclaimed.

'I can indeed believe that you are most unhappy.'

'Yes—but there is one thing that makes me more unhappy than all the rest. My husband has left me without telling me where he is gone, or when I shall see him again. That—that is worse than all! I could have borne poverty, have borne anything, as long as we were together. I do not even know what it is that he has done to compel him to leave his home like a thief in the night. Ah! Mr Roding, have you no grain of comfort for me? Cannot you tell me where Matthew is and when I shall see him again? Take pity on me—take pity!' She came forward and knelt by his chair, and took one of his gnarled hands in hers and pressed it to her lips and wetted it with her tears. 'I have been a vile, wicked woman—no one knows it better than I know it to-day. All along, I have done my utmost to injure you—you, my husband's father and our most generous benefactor. Ah! it seems incredible—impossible of belief, and yet it is too true. But yours is one of those noble natures which return good for evil, and perhaps, after a time, you may be able to say even to me, "You are forgiven."'

Grandad stood up, and taking both her hands in his, raised her to her feet. 'It is said already, if not by my lips, then in my heart,' he answered very gently and gravely. 'Who am I, that I should constitute myself a judge of others?' With that he took her face between his hands and touched her forehead with his lips, as a seal and token that the past was forgotten.

'What have I done to deserve so much goodness?' she murmured. 'Nothing—nothing!'

There was a tiny gong close to Grandad's hand; this he now struck three times in quick succession. An instant later, Matthew Roding appeared in the doorway. With a cry that was compounded of joy and utter amazement, his wife sprang forward and flung herself into his arms. Grandad and Ruff turned away, and busied themselves among their papers.

Scarcely was this incident over, when a loud summons at the front door made itself heard through the house, and presently a servant announced, 'Mr Fitch, to see Mr Roding.' Matthew turned pale. 'Twelve o'clock was the hour named, and it is now scarcely eleven.'

'Mr Fitch is here at my request,' said Grandad. They all stared at him. 'I sent him a note a couple of hours ago,' he went on, 'asking him to come here as early as possible. I thought that I would see him myself, with the view of ascertaining whether there was not a possibility of our being able to arrive at some sort of amicable arrangement.'

Matthew started to his feet. 'Don't see him, father—don't go near him! It is altogether useless; he will only insult you. Leave him to do his worst.'

'Still, now that he is here, I may as well have a word with him,' said Grandad with quiet persistency. Then to the servant: 'Show me to the room in which Mr Fitch is waiting.' As he went out, he beckoned Ruff to accompany him.

Mrs Roding could not get over her astonishment at her husband's reappearance. 'It is all through Grandad that you see me here,' he said in answer to her questions. 'I was just about to open the door at the bottom of the garden, when he laid his hand on my shoulder. He had been smoking an outdoor pipe in the dark, as he often does. He made me go back with him into his room, and there I opened my heart to him, and told him everything. Would that I had done so six months ago! It was he who counselled me to remain and face whatever might happen. He showed me what a coward's act it would be to take to flight at the very time I ought to stick to my colours like a man. He made me feel ashamed of myself, and that's the truth; and—and so here I am, and here I mean to stop, come what may.'

'Heaven bless him for giving you back to me!' said Mrs Roding fervently.—'But here he is.'

Grandad entered smilingly, a slip of paper in his hand. 'Read that,' he said to his son; 'I don't think Mr Fitch will trouble you again in a hurry.'

Matthew took the paper and read. It was a receipt in full for two thousand four hundred and odd pounds—the balance, in fact, between the sum due from Fitch for the borrowed money with interest on the same, and the current market value of the Congo bonds which had been deposited as security for the loan.

To Matthew Roding, it seemed as if nothing less than a miracle had been wrought on his behalf. He read the receipt again and yet again, as doubting the evidence of his senses. 'You have done this, father!' he exclaimed at length. 'But—but I don't understand!—' And then he paused.

'You don't understand where the coin came from to do it with, eh?' said Grandad, rubbing his hands and chuckling to himself. 'Well, well;

I happened to have a little bit hid away in a stocking, and it seemed to me that I could not put it to a better use.'

'Father,' said Matthew, in a voice replete with emotion, 'you have lifted from my shoulders the heaviest burden of all. This it was that drove me from home, or would have done, but for your intervention.'

At this juncture Ruff returned; he, too, carried a slip of paper, which he gave to Grandad, who, after glancing at it, passed it on to his son. It was a receipt for the overdue rent.

For a time Matthew's power of speech seemed to have left him. 'Father, what can I say except that you overwhelm me with humiliation!' he contrived at length to stammer out.

'Ah, ah, say you, so? Just wait till I have done with you,' answered Grandad, at the same time making a sign to Ruff, who again left the room. 'Here is a schedule of your private liabilities,' he went on, 'which, with a few exceptions, will, I believe, be found to be tolerably exhaustive. Now, as there happen to be a few more stivers left where the others came from, I think we couldn't utilise them better than by sweeping these outstandings into limbo and starting afresh with a clean slate. What say you?'

'Are you a wizard, father, or what are you?' Grandad laughed aloud; he was evidently in the pleasantest of humours; but before he could reply, Ruff and Bunker entered the room. Grandad having motioned to the old clerk to take a chair close by him, drew from his breast-pocket a thick roll of bank-notes. After counting and separating a certain number from the rest, he put the roll back into his pocket. Then turning to Bunker, he said: 'Here are a number of bills which I wish to have settled at once; you will find the address on each of them. And here is a summary showing the aggregate total, together with bank-notes for the amount. Verify the notes, and then set off at once. You will, of course, take a hansom, and you will come back here as soon as you have finished your round.'

'Right you are, sir,' answered Peter as he proceeded to finger and count the notes with his customary business-like deliberation.

While he was thus engaged, Matthew and his wife looked at each other with wonder-stricken eyes. Each knew that the same thought was in the other's mind. The money—the money wherewith these miracles were being worked—where can that have come from? They were to be enlightened sooner than they imagined.

Taking off his spectacles and leaning forward a little with his arms resting on the table, Abel Roding confronted his son. 'So far, we seem to be threading our way out of the maze,' he said; 'but it won't do to halloo yet awhile. In the course of the talk you and I had together in my room last night, I think you mentioned that certain accommodation bills of yours, representing somewhere about three thousand pounds, would fall due in the course of the next two or three weeks, and that you had no means whatever of meeting them?'

'That is precisely the state of the case.'

'And there will be some other matters to meet as well?'

'Undoubtedly—a few. Probably a couple of thousand pounds would cover the lot.'

'And your balance at the bank?'

Matthew lifted his shoulders. 'The merest trifle, somewhere about sixty or seventy pounds, I imagine.'

'Then, notwithstanding what has been done already, the Bankruptcy Court still stares you in the face?'

'I see no other prospect before me.'

'Ah, my boy, as we say in, the North, you have brought your pigs to a pretty market.' He drummed musingly for a few moments on the table with his fingers. Then turning his keen eyes full on Matthew, he said: 'You look fagged and ill; and no wonder. My advice is, that you and Matilda should start this very day for a month's holiday. Go down to Cumberland—go on the continent—go anywhere, so long as you get a thorough change and leave all your worries behind you.'

Matthew Roding drew a deep breath and flushed to the roots of his hair. 'If I could but do as you suggest, father!' he said. 'But about the acceptances? I cannot run away from my liabilities.'

'You would have done so last night but for me,' answered Grandad with a grim smile. 'As for the acceptances, you will have to leave them and everything else for me to arrange while you are away.'

'Pardon me, father, but I fail to understand how you intend'—

'Then your wits are scarcely so keen as they used to be. There is but one way of meeting your liabilities honourably, and that is by paying them.—I am not surprised at your astonishment. Allow me to enlighten you. When I transferred my business to you, and lodged ten thousand pounds in your name at the bank, you were under the impression that I had beggared myself to do so. Were you not somewhat of a simpleton to imagine anything of the kind? Ought you not to have known human nature a little better than that? I endowed you with a portion only of my fortune; had that portion been the whole of it, where would you be to-day? You and I courted the fickle goddess in two very different ways. What your way has brought you to is patent to everybody. My method of going to work was the exact opposite of yours. I never speculated rashly; what I made, I invested judiciously, being content with small margins of profit. I never took a step in the dark knowingly. My fortune was the slow patient accumulation of many years. You know the adage—"Many a little makes a mickle;" and my case proved the truth of it.'

There was silence for a time after Grandad had ceased speaking. Two at least of his auditors were too amazed for words. What must their thoughts have been!

'As for the Bankside business,' resumed Grandad after a space.—'I should like you to go back to it, on your return from your holiday, by which time Bunker and I will have overhauled affairs and got them a little bit ship-shape. My predecessor made a fortune in the business; I followed suit; and there's time enough for you to do the same, if only you will take to heart the lesson of the past, and keep it in memory through the years to come.—But I am not going to preach at you. The best thing you can do is to send

out for a Bradshaw and get your portmanteau packed.'

Everything was carried out in accordance with Grandad's arrangements; and Matthew Roding started life afresh, a humbler and a wiser man, Ruff and Mary were married shortly after, and on their return from their wedding trip, Grandad took up his abode with them. Freddy is in the happy position of having two homes, and he divides his time pretty equally between them.

Of Grigson it may just be recorded that he was arrested in Paris about a month after his flight. Ruff found a photograph of him in an album of Mrs Roding, for the specious, showy clerk had been somewhat of a favourite with his employer's wife. It was through the instrumentality of the photograph in question that he was captured.

## THE MONTH:

### SCIENCE AND ARTS.

At a meeting lately of the Royal Microscopical Society, Mr Crisp called attention to what he regarded as a misstatement on the part of Sir Henry Roscoe in his Presidential address to the British Association. In this address, Sir Henry Roscoe treated the one-hundred-thousandth part of an inch as the limit of visibility with the highest known magnifying power. Mr Crisp pointed out that the limit of visibility can hardly be definitely stated, but he assumed it to be beyond the one-five-hundred-thousandth part of an inch. Dr Dallinger, the President of the Society, corroborated Mr Crisp's observations, and said that he himself had certainly seen objects which were between the one-two-hundred-thousandth and one-three-hundred-thousandth of an inch. This correction is worth recording, if only as a proof of the marvellous perfection to which the modern microscope has attained.

A French pharmaceutical journal describes a new disinfectant liquid of great efficacy and power which has recently been produced at Paris from coal-oil. In appearance it is a sirupy brown liquid of a not disagreeable odour, which turns milky on the addition of water. It is described as being the result of a peculiar saponification of coal-oil by caustic soda. It can be used for all purposes where disinfection is required. It will destroy moss and fungus on trees; and by sponging a horse with a weak solution of the compound, aggressive flies are kept away.

A new form of boat, which may be described as a water-bicycle, has recently been tried with success in New York harbour. This curious vessel consists of two cigar-shaped tubes, each twelve feet in length and one foot in diameter, connected together by an iron framework. Between the tubes is a light water-wheel, which is worked by pedals, the navigator being seated upon a bicycle saddle fixed above the wheel. Although, on the day of the experiment, the wind was blowing hard and there was a choppy sea, the novel boat travelled three miles in forty-five minutes.

Some very interesting particulars concerning the art of diamond-cutting were recently contributed to the *Times* by Mr Lewis Atkinson, the

manager of the British diamond industry which attracted so much attention in the Cape of Good Hope Court of the Colonial and Indian Exhibition. From this source we learn that up to the end of the year 1885 no fewer than six and a half tons of diamonds had been extracted from the four principal mines of South Africa, the value of the gems being estimated at about forty millions sterling. When these mines were discovered, there was only one diamond-cutter in London, and it became necessary to bring Dutch workers from Amsterdam. These workers struck several times for higher wages; but when, flushed with success, they demanded eighteen pounds per week, they were dismissed, and Englishmen put in their places. The great secret in diamond-cutting is 'patience,' and for this reason it is thought to be a form of labour peculiarly adapted to women. There are now many diamond-cutters in London in full work, and it is believed that the industry is being rapidly restored to Britain, from which country it migrated to Amsterdam two hundred years ago in consequence of religious persecution. The Americans are credited with being the best judges of diamonds in the world, and it is stated that they buy about three millions-worth annually from English cutters.

About ten years ago, Dr Goodrich of Kensington pointed out the danger which might result from the possibility of disease-germs escaping from the open windows of hospitals; and subsequently other medical men have called attention to the same possible source of infection. The late scarlet-fever epidemic in the metropolis has had the good effect of once more reviving this important question, and it would be well if a special inquiry were undertaken to ascertain whether the evil complained of is real or imaginary. It would be possible to arrange a system of ventilation which would insure the foul air from our hospital wards being passed through a furnace before mingling with the outer atmosphere. On the other hand, would such a course be consistent, while the foul air from our sewers is plentifully emitted from every street grating?

The system of electric traction for tramcars is steadily advancing, especially in America; and it is prophesied that in another ten years, or thereabouts, horses on tramcars will have been altogether superseded, with benefit to man and beast alike; for the poor quadruped of our streets has no harder work to do than the continual stopping and starting of these heavy vehicles. But we cannot boast that humane feelings have had much to do with the change. The fact is, that while horse-flesh costs about fivepence a mile, the electric system is about one penny less; it therefore pays well to be humane in this matter.

The increasing use of the electric light has led to great improvements in the electrodes or carbon rods between which the luminous arc is produced. Formerly, these rods were simply sawn from dense gas coke. But it was soon found that the impurities contained in this material led to constant flickerings and other irregularities. So processes for manufacturing the rods were invented and practised, first in France, then in America, and eventually the industry was founded in this country by a Company which has its headquarters at Millwall. In the process adopted at these works—that of Dr Liepmann—specially prepared

coke is first of all pulverised in a disintegrator; it is then hardened by heat, mixed with a tarry compound, and thoroughly incorporated into a plastic mass in a mill. It is afterwards subjected to hydraulic pressure, and forced through dies of different apertures, so as to form rods of various thicknesses. These are cut into twelve-inch lengths, and after being air-dried and straightened, are baked at a red-heat in cast-iron boxes. At the same works, carbon plates for batteries are also made, the weekly output of both rods and plates being about twenty thousand.

The recent fatal accident in a lead-mine, through the ignition of gas by shot-firing, once more calls attention to the necessity of finding some safer means of blasting rock than is afforded by gunpowder. The offer of Mr Ellis Lever to place in the hands of the Home Secretary the sum of one thousand pounds, to be divided between the inventor of such a boon and the producer of the best safety lamp for miners' use, has, for apparently very inadequate reasons, been rejected by the government. It would seem, however, from recent experiments, that the new explosive, Roburite, described recently by us (No. 203), fulfils all the conditions required. It will do the same amount of work in detaching rock as gunpowder will, while it emits neither flash nor sparks. Experiments made in chambers charged with explosive gases mingled with coal-dust showed that roburite does not ignite them. We trust that these results will be verified by further trials, and that by these means one of the most deadly risks which the miner has to meet with will cease to exist.

It is always a matter for regret, especially for the taxpayer, that our expensive engines of warfare are superseded by something different almost as soon as they are completed. Our small-arms, for instance, have generally been superseded by some other pattern before they have been furnished to all our troops. The torpedo boats about which we have heard so much during the past few years, and which have always been considered such marvels of speed and power in a small compass, are now found to exhibit several grave faults. They are crank, uncomfortable, and wet at sea, and therefore so unpopular with the service, that they are never used except for practice; and even when this happens, some defect is sure to be detected, owing to the idleness to which they have been condemned. So they are to be replaced by a new type of torpedo vessel which shall combine the good qualities of the old boats with the general usefulness of a pinnace. The first boat of the new pattern was lately tried at Poplar, and gave, it is said, great satisfaction to all who watched her performance.

An artificial substitute for gum-arabic which is said to possess the appearance and properties of the genuine article, is described by the *American Druggist*. It is made as follows: Twenty parts of powdered sugar are boiled in fresh milk seven parts; with this are mixed fifty parts of a thirty-six per cent. solution of sodic silicate (water-glass). After cooling to a temperature of one hundred and twenty-two degrees Fahrenheit, the mixture is poured into tin boxes, when the imitation gum separates from it in granular mass. This product cannot be used for adulterating true gum without ready detection.

Methylated spirit is a compound which is used for various purposes in the arts, and is also pretty well known in the domestic household. It consists of spirits of wine rendered nauseous to the taste by the admixture of a certain proportion of wood-naphtha, an addition which is purposely made to it, so that it cannot be used for drinking purposes, to the prejudice of the revenue. It was believed that by no process could its disagreeable smell and taste be taken from it; but this seems to be an erroneous idea. A mineral-water engineer and manufacturer of essences has recently been fined for using this potent spirit in his trade; and it almost raises a smile when we learn that his principal use for the fiery compound has been in the manufacture of essences wherewith to flavour so-called temperance beverages. The analyst at Somerset House who examined some of these sweet compounds deposed that they were composed entirely of methylated spirit diluted with water, and suitably flavoured. The half-gallon of samples purchased from this manufacturer, upon which the prosecution rested, cost twenty-four shillings, while the price of methylated spirit per gallon undiluted is three shillings and sixpence. It is an uncomfortable thought that other popular drinks may be added to by the same vile compound.

In Germany, paving-stones are being manufactured by a new method. The material is a kind of brick made by mixing finely ground red argillaceous slate and ground clay, with five per cent. of iron ore added to the mixture. This compound is moistened with a solution of sulphate of iron to which fine iron ore has been added; it is next formed into slabs by pressure, and submitted for several hours to the action of a furnace.

In the recent review of 'The Progress of Preventive Medicine during the Victorian Era,' which formed the subject of Dr Thorne Thorne's address to the Epidemiological Society, a good deal of attention was directed to the gradual decline of smallpox in this country. In the period between the years 1838-1842, the deaths from this disease in England amounted to 57.2 per hundred thousand living. In the similar period of five years 1880-1884, the death-rate had sunk to 6.5 per hundred thousand. It is believed that vaccination has not only had a direct influence in this marvellous reduction in the number of victims to a terrible scourge, but has also to some extent acted indirectly, in rendering the offspring of vaccinated parents less liable to the disease.

It is a matter of common knowledge that india-rubber tubing gradually loses its elasticity, and becomes so hard that it will readily crack by pressure with the fingers. This alteration of structure is said to be due to the gradual formation of sulphuric acid, by the action of the atmosphere upon the sulphur contained in the material, and which is added to it in the vulcanising process. The deterioration can be obviated by occasionally washing the tubing with a weak alkaline solution.

An interesting paper on 'Primary Batteries for Illuminating Purposes' was recently read at a meeting of the Society of Engineers by the past President, Mr Nursey. We may broadly say that such an exposition of the capabilities of these

batteries was much wanted, for new kinds are constantly being invented, and many of them are much vaunted by those who have an interest in their commercial success. After describing the best known of these batteries, Mr Nursey suggested that they should be submitted to a committee of independent electricians, chemists, engineers, and others, so that each battery might be subjected to a rigorous test. In this way alone the survival of the fittest would be secured, and investors would save their capital. In the discussion which followed the reading of the paper, Mr Preece, whose position at the Post-office has given him great experience of the behaviour of all kinds of batteries, expressed himself as being to a certain extent an opponent of primary batteries. He believed that any attempt at lighting mansions or houses by their aid must end in failure. One point in his remarks is especially worthy of notice. The inventors of new batteries are very fond of saying that the by-products will almost pay the expense of maintenance. Mr Preece tells us that in the Post-office are some five hundred thousand batteries, the products of which are of course very weighty. These products, however, have never yet paid the cost of collection.

A new process has been patented in America for the manufacture of tin plates of great length. The substratum is of steel, which, first rolled hot, and then cold, is gradually reduced to the required thickness. The surface of the metal is next scoured; and then, in the form of a continuous plate, it is fed into a bath of molten tin. After the metal has received in this way a coating of tin on both sides, it is passed between highly polished rolls under immense pressure, by which means the tin and steel are so consolidated together that the finished plate is superior in every respect to the ordinary article.

There was recently sold in London six tons of ivory sent by Stanley from the Congo via Belgium. The weight and quality were considered good; and Messrs Rodgers and Sons, the great cutlers of Sheffield, were the buyers. It is stated that this firm consumes annually the ivory produced by eight hundred elephants. At this rate of consumption, the increase in value of this beautiful material, and the threatened extinction of the elephant, are not to be wondered at. It seems that the African ivory-dealers are quite as expert at trade tricks as are the members of more civilised communities. They have discovered the advantage of pouring lead into the cavity of the ivory tusk to increase its weight, a mode of deception which often remains undiscovered until the workman saws the tusk asunder, when the teeth of the tool break against the inserted metal. As ivory is twelve shillings a pound, the fraud is a profitable one.

Mr Tuer, of the Leadenhall Press, writes us as follows with regard to the use of cream with hot milk for the weakly: 'The value of cream as a nourishing and sustaining food is well understood; but it is a food apt to disagree. If mixed with milk before boiling, cream becomes partially coagulated; and cold milk with added cream is difficult of digestion. Some months ago, I tried the effect of good thick sweet cream stirred into very hot milk, that is, immediately after boiling. The mixture remained, as I had hoped, perfectly limpid and without tendency

to coagulate. Grateful to the palate and easily assimilated, I find, from daily experience, that a full mid-day meal of this food—at all times, for the weakly, infinitely superior to cod-liver oil—consisting of a quarter of a pint of cream, a pint to a pint and a half of milk, and a due proportion of bread, may be taken even by a dyspeptic like myself without fear of after-discomfort.'

#### NEW-YEAR'S EVE.

SILENT we stand 'neath the wintry sky ;  
The minutes are going fast ;  
When out on the midnight air there rings  
The sound of the bells at last ;  
Clashing and chiming the Old Year out,  
As we stand at the New-Year's door,  
Waiting with half-reluctant steps  
To cross its threshold o'er.

Full of changes the Past has been ;  
And changes will come again,  
Bringing their wealth of untold joy,  
Or a weight of infinite pain ;  
Loosening our hold on earthly things  
And pleasures, so transient here ;  
Welcoming in fresh loves and lives,  
And parting with those held dear.

As we look back with a lingering glance  
O'er bygone months and days,  
How little we find for murmuring,  
How much we find for praise !  
Should we, then, hesitate to cross  
And enter another year,  
Rich in that all-sufficing love  
That casts out every fear ?

Hush ! For one moment, silence reigns ;  
Stilled is the merry din ;  
Quietly let the Old Year go,  
And let the New pass in ;  
Only an instant, and then, with a rush,  
As if all the bells of earth  
Had caught the sound and lent their voice,  
Is welcomed the New-Year's birth.

MENA BIELBY.

*Volume IV. of the Fifth Series of CHAMBERS'S JOURNAL is now completed, price Nine Shillings.*

*A Title-page and Index, price One Penny, have been prepared, and may be ordered through any bookseller.*

*A cloth case for binding the whole of the numbers for 1887 is also ready.*

*Back numbers to complete sets may be had at all times.*

The First Monthly Part of the New Volume, issued January 31st, will contain the opening Chapters of a new Novel :

## THIS MORTAL COIL

By GRANT ALLEN,

AUTHOR OF 'IN ALL SHADES,' 'STRANGE STORIES,' &c.

Also a complete Story by GEORGE MANVILLE FENN, entitled :

## THE GOLDEN INCUBUS.

END OF THE FOURTH VOLUME

Printed and Published by W. and R. Chambers,  
47 Paternoster Row, London, and 359 High Street, Edinburgh.
